

Philipp Hilbert. *Hands-on Product Manager who ships, not just specifies.*

Positioning, ten years of end-to-end PM ownership, AI-native tooling, and founder-level execution make me a natural fit for a team where PMs build alongside engineers.

§ WHY NEWWORK SOFTWARE

The explicit expectation that PMs build directly in the product using Cursor and AI-assisted workflows is not boilerplate — it describes how I have actually worked for the last several years. Small, empowered teams moving from discovery to production without ceremony is the environment where I do my clearest work. The combination of deep ownership, rapid iteration, and pragmatic decision-making described in the role mirrors what I delivered at Rohde & Schwarz, where I shipped a feature independently in one week that engineers had been unable to deliver for over a year.

That is exactly the environment where my strengths compound.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Cursor / VSCode**, in-repo feature work and refactors
- **Claude Code**, autonomous implementation loops
- **GPT**, spec drafting and edge-case generation
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy iteration
- **GitHub Copilot**, inline code acceleration
- **n8n**, agentic workflow automation

- **Gamma.app**, stakeholder communication and decks

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, GitOps, Dagster, dbt, DuckDB, MicroStrategy, Redpanda, Bitbucket, Git, Ionic, CGM API integration, Low-code platforms (Java-backed), HTML/CSS.

§ SIDE PROJECT

CRYPTO BACKTEST ENGINE [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

A personal backtesting and market-analysis framework built to stress-test algorithmic trading ideas across on-chain and centralised venues.

- Ingests historical order-book and on-chain data from venues including Hyperliquid and Bitget for perpetual futures and spot analysis.
- Built around a file-queue-based agent loop, keeping compute modular and independently restartable.
- Informed by deep hands-on experience with Coinglass, Hyblock Capital, slippage modelling, and liquidation heatmap analysis.
- Demonstrates the same end-to-end build discipline – idea to working system, no hand-off – that the NEWWORK PM role calls for.

§ HOW I WOULD WORK AT NEWWORK SOFTWARE

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Sit in on discovery calls, sprint ceremonies, and support queues to map where customer problems are being translated into product decisions well and where they are getting lost in documentation.

WEEK 2

Slice and validate.

Pick one scoped problem identified in week one, write a tight user story with acceptance criteria, prototype a solution in Lovable or directly in Cursor alongside an engineer, and get it in front of a real user.

WEEK 3+

Ship and close loops.

Own the delivery of that first slice through to production, instrument it with the right tracking, and feed back what real usage reveals into the next iteration cycle.

I COVER LETTER

Dear NEWWORK Software team,

The job description states that Product Managers at NEWWORK build directly in the product using modern tools and AI-assisted workflows. That sentence caught my attention not because it sounds appealing, but because it describes how I have worked for the past several years. At Rohde & Schwarz, I owned feature delivery end-to-end inside a government-contracted defence programme: writing user stories, supporting implementation, running acceptance criteria, and handling GitOps rollout via ArgoCD – without relying on a separate PM layer to translate between me and the engineers. I reduced deployment times from several days to under forty minutes by taking direct ownership of the infrastructure problem, and I delivered a feature in one week that the project lead had been requesting from engineers for over a year. That is not a leadership story; it is an execution story.

The AI-native tooling you name – Cursor specifically – is part of my daily stack. I use Cursor alongside Claude Code, GitHub Copilot, and Lovable to prototype, refactor, and ship faster than a traditional spec-and-wait cycle would allow. I treat LLMs as junior pair programmers: useful for acceleration, requiring judgment to direct. This means I can close the loop between a customer problem and a working implementation faster than a PM who relies entirely on engineering capacity.

My background spans B2B SaaS in InsurTech (Emil Group), public-sector analytics platforms (Federal Employment Agency), and AI data management for defence (Rohde & Schwarz). In each context, the core challenge was the same: translate ambiguous operational reality into clear, dev-ready product decisions, then stay close enough to execution to catch the gaps before they become delays. At Emil Group, I re-established sprint discipline in a 17-person team that had lost delivery stability, split it into smaller effective Scrum units, and reduced senior developer

attrition from near-total to a single departure – by owning the product process, not just the roadmap.

I am drawn to NEWWORK specifically because the Advertising Services space rewards product decisions that are tightly coupled to real user behaviour. The combination of rapid experimentation, direct building, and small empowered teams is the environment where I have consistently delivered my best work. I am not looking for a role where PM means writing documents and attending standups; I am looking for one where I own outcomes from discovery through to what users actually do after launch.

I am based in Berlin, available within four weeks of an offer, and happy to meet in person or via video to discuss the specifics of what you are building and where I could be most useful immediately.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager with nearly ten years of experience translating complex operational workflows into shipped software, across AI data platforms, B2B SaaS, regulated environments, and founder-led ventures. AI-native by practice: Cursor, Claude Code, GitHub Copilot, Lovable, and n8n are daily tools, not occasional experiments. Comfortable in ambiguity, close to engineers, and accountable for outcomes rather than documentation. Brings founder-level pragmatism and low-ego execution to small, empowered product teams.

§ CORE STRENGTHS

- End-to-end feature ownership from discovery through production rollout
- AI-native tooling for rapid prototyping and autonomous implementation loops
- Translating customer problems into dev-ready stories without a translation layer
- Sprint discipline, backlog management, and delivery stability under pressure
- Cross-functional alignment across engineering, design, QA, and business
- Risk-first product discovery: value, feasibility, usability, viability
- Direct infrastructure and DevOps fluency – unblocks rather than escalates
- Pragmatic scope decisions balancing speed, quality, and real-world impact

- Founder-level ownership, low ego, high agency

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout – no hand-off required
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature the project lead had requested from engineers for over a year
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA
- Improved data quality via filtering, tagging, reproducible data transformation pipelines, and audit trails with full data provenance

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling – iterating continuously against real analyst usage
- Introduced Dagster for automated ETL and indicator generation, replacing manual pipeline work
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Standardised CI/CD with full test integration at build time
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Git

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Designed and delivered a Claims Center module from concept to production rollout within a B2B platform reducing insurance time-to-market from over one year to under one week

- Re-established sprint discipline; split a bloated 17-person team into smaller, effective Scrum units with clear ownership and deputy structures
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

Tech: Low-code platform (Java), HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient-facing flows – digital anamnesis, meal and therapy plans, transport, chat, document storage – under tight deadlines with strict highest-leverage prioritisation
- Integrated CGM interface into hospital information system workflows, managing complex legacy API constraints transparently with stakeholders
- Led a small cross-functional team focused on shipping, not specifying

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware; USP: setup under two minutes, no technical knowledge required
- Served as deputy IT security officer; responsible for attack vector mitigation and security governance

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built group-based P2P payment product end-to-end: PSP integration, full UX/UI design, mobile app prototype; later acquired and operated by Sparkasse

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder / CDO / CFO / Project Lead

- Established full digital tooling, financial and investment planning, and ERP introduction for an agritech venture across multiple roles
