

Philipp Hilbert. *Hands-on Product Manager who ships, not just specifies.*

Positioning, ten years of end-to-end PM ownership, AI-native tooling, and founder-level execution make me a natural fit for a team where PMs build alongside engineers.

Dear NEWWORK Software team,

The job description states that Product Managers at NEWWORK build directly in the product using modern tools and AI-assisted workflows. That sentence caught my attention not because it sounds appealing, but because it describes how I have worked for the past several years. At Rohde & Schwarz, I owned feature delivery end-to-end inside a government-contracted defence programme: writing user stories, supporting implementation, running acceptance criteria, and handling GitOps rollout via ArgoCD – without relying on a separate PM layer to translate between me and the engineers. I reduced deployment times from several days to under forty minutes by taking direct ownership of the infrastructure problem, and I delivered a feature in one week that the project lead had been requesting from engineers for over a year. That is not a leadership story; it is an execution story.

The AI-native tooling you name – Cursor specifically – is part of my daily stack. I use Cursor alongside Claude Code, GitHub Copilot, and Lovable to prototype, refactor, and ship faster than a traditional spec-and-wait cycle would allow. I treat LLMs as junior pair programmers: useful for acceleration, requiring judgment to direct. This means I can close the loop between a customer problem and a working implementation faster than a PM who relies entirely on engineering capacity.

My background spans B2B SaaS in InsurTech (Emil Group), public-sector analytics platforms (Federal Employment Agency), and AI data management for defence (Rohde & Schwarz). In each context, the core challenge was the same: translate ambiguous operational reality into clear, dev-ready product decisions, then stay close enough to execution to catch the gaps before they become delays. At Emil Group, I re-established sprint discipline in a 17-person team that had lost delivery stability, split it into smaller effective Scrum units, and reduced senior developer attrition from near-total to a single departure – by owning the product process, not just the roadmap.

I am drawn to NEWWORK specifically because the Advertising Services space rewards product decisions that are tightly coupled to real user behaviour. The combination of rapid experimentation, direct building, and small empowered teams is the environment where I have consistently delivered my best work. I am not looking for a role where PM means writing documents and attending standups; I am looking for one where I own outcomes from discovery through to what users actually do after launch.

I am based in Berlin, available within four weeks of an offer, and happy to meet in person or via video to discuss the specifics of what you are building and where I could be most useful immediately.

Best regards, *Philipp Hilbert*
