

Philipp Hilbert. *Technical translator between business requirements and engineering reality.*

Positioning, nearly ten years turning complex operational workflows into dev-ready specifications, backlog discipline, and shipped software – for fintech, insurtech, and regulated environments.

§ WHY ADVICE CONSULTING

The mandate here is specific and demanding: a Fintech subsidiary serving 18,000 field advisors needs someone who can take fachliche Anforderungen and turn them into epics, stories, and acceptance criteria that a distributed engineering team can act on immediately. That is not a coordination role – it is a translation and quality-assurance role, and it is where I have spent the better part of a decade. The posting's explicit call for someone who "aus fachlichen Ideen technisch umsetzbare Lösungen macht" maps directly to the work I did at Emil Group, where I rebuilt sprint discipline and refinement practices for a bloated team in an insurtech platform, and at Rohde & Schwarz, where I owned feature delivery end-to-end from user story to GitOps rollout. *That kind of bridge-building between domain complexity and engineering clarity is precisely where my strengths compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirement decomposition and acceptance-criteria drafting
- **GPT**, stakeholder communication drafts and edge-case generation
- **GitHub Copilot**, in-repo review and implementation support
- **Cursor / VSCode**, specification-aligned code navigation

- **Lovable**, rapid front-end prototyping for early story validation
 - **Gamma.app**, structured stakeholder presentations
 - **n8n**, workflow automation and agentic process design
 - **Jira / Confluence**, backlog management, ticket lifecycle, documentation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, JavaScript, AngularJS, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, GitOps pipelines, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, CGM API integration, Shopware, low-code insurance platforms, Bitbucket, Git.

§ SIDE PROJECT

BACKTEST ENGINE & DEV AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Personal infrastructure project combining a crypto backtesting engine with a file-queue-based autonomous dev-agent loop.

- Builds and validates algorithmic trading strategies against historical market data across centralised and decentralised venues.
 - Implements a file-queue agent architecture for autonomous task execution, directly applicable to multi-team workflow orchestration.
 - Maintained alongside active trading on Hyperliquid, Bitget, Jupiter, and cross-chain bridging protocols.
 - Demonstrates the same end-to-end ownership expected in the TPO role: scoping, implementation, iteration, and operational monitoring – without a team to delegate to.
-

§ HOW I WOULD WORK AT ADVICE CONSULTING

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow existing stakeholder sessions and architecture reviews, map the current Epic-to-Story decomposition practice against what the engineering team actually needs to reach Definition of Ready, and identify where the biggest translation friction sits.

WEEK 2

Sharpen, slice, validate.

Refine two or three backlog items end-to-end – from raw business requirement through acceptance criteria and test-case outline – and validate the output directly with developers and QA before the next sprint planning.

WEEK 3+

Ship, unblock, close loops.

Own the backlog rhythm, act as primary contact for fachliche Rückfragen, and establish a lightweight documentation standard in Confluence so that knowledge doesn't leave the room when stakeholders rotate.

I COVER LETTER

Sehr geehrte Damen und Herren,

die ausgeschriebene Rolle trifft einen Schwerpunkt, den ich in verschiedenen Kontexten immer wieder als den eigentlichen Engpass erlebt habe: nicht das Fehlen guter Ideen oder guter Entwickler, sondern die Lücke zwischen beidem. Ein Technical Product Owner, der diese Lücke nicht schließt, produziert Tickets – einer, der sie schließt, produziert Software. Ich bin auf die zweite Variante spezialisiert.

Bei Emil Group habe ich eine insurtech B2B-Plattform geerbt, die unter Lieferdruck das Sprint-Fundament verloren hatte. Ein 17-köpfiges Team ohne klare Ownership, Velocity nicht messbar, Client-Vertrauen angeschlagen. Ich habe das Team in fokussierte Scrum-Einheiten aufgeteilt, Refinement-Prozesse neu etabliert, Akzeptanzkriterien systematisiert und durch wöchentliche Produkt-Workshops direkt mit dem Kunden die Stabilität zurückgewonnen. Das Ergebnis: aus nahezu vollständiger Senior-Developer-Fluktuation wurde ein einziger Abgang. Das entspricht exakt dem, was die Rolle hier beschreibt – Entwicklungsteams Orientierung geben und aus Anforderungen hochwertige Software machen.

Bei Rohde & Schwarz habe ich im Kontext eines europäischen Verteidigungsprogramms eine zentrale KI- und Datenmanagement-Plattform als alleiniger Product Owner betreut. Ich habe Features vollständig eigenverantwortlich durchgezogen – von der User Story über

Implementierungsbegleitung und Testfälle bis zum GitOps-Rollout mit ArgoCD. Ein Feature, das der Project Lead über ein Jahr lang von den Ingenieuren gefordert hatte, habe ich in einer Woche geliefert. Das war kein Zufall, sondern das Ergebnis eines klaren Verständnisses technischer Zusammenhänge kombiniert mit pragmatischer Strukturierung.

Jira und Confluence sind für mich tägliche Werkzeuge, keine Formalitäten. Ich pflege Backlogs so, dass ein Entwickler ohne Rückfrage mit dem obersten Ticket anfangen kann. Ich schreibe Akzeptanzkriterien so, dass QA sie direkt in Testfälle überführen kann. Und ich koordiniere mit externen Entwicklungspartnern auf Englisch mit derselben Präzision wie intern auf Deutsch – mein öffentlich verfügbares englisches Sprachsample aus der Qcrypt-Zeit kann das belegen.

Das Unternehmen, das Sie suchen – Fintech-Tochtergesellschaft, geschäftskritische Web-Plattform, Enterprise-Zielarchitektur, internationales Umfeld – ist genau der Kontext, in dem ich produktiv bin. Ich freue mich auf ein Gespräch.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Technical Product Owner and Product Manager with nearly ten years of experience translating complex operational requirements into dev-ready specifications, backlog discipline, and shipped software. Background spans insurtech SaaS platforms, regulated public-sector systems, AI/data platforms within defence programmes, and founder-level company building. Proven in environments where requirements are incomplete, teams need structural clarity, and delivery must not wait for perfect information. Fluent in Jira, Confluence, agile ceremonies, and cross-functional stakeholder alignment across business, engineering, QA, architecture, and compliance.

§ CORE STRENGTHS

- Decomposing fachliche Anforderungen into Epics, Stories, and testable acceptance criteria
- Sprint discipline, backlog ownership, and Definition of Ready enforcement
- Cross-functional alignment across business, engineering, architecture, and QA
- End-to-end feature delivery including implementation support and rollout
- Stakeholder communication in regulated and high-pressure environments

- Workshop facilitation and client trust rebuilding
 - Deputy IT security officer experience (compliance, governance, data lineage)
 - Technical fluency across modern software stacks and infrastructure
 - Bilingual delivery – German native, English C2
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout via ArgoCD
- Sole owner of a feature the project lead had been requesting from engineers for over a year – delivered in one week by independently resolving OpenShift infrastructure blockers
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA
- Responsible for data transformation, transparency, and auditability with multinational stakeholders (English-language coordination)
- Designed audit trails with full data provenance enabling SafeAI and ExplainableAI evaluation concepts

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features for the Arbeitsmarktmonitor including labour shortage analytics, regional comparison tooling, and modernised admin interfaces
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration at build time
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage

- Coordinated with internal and external development partners across delivery and infrastructure workstreams

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Bitbucket, Git

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Re-established sprint discipline and delivery stability in a prototype-stage environment; split a bloated 17-person team into focused Scrum units with ownership and deputy structures
- Reintroduced velocity tracking and structured refinement practices; restored Definition of Ready as a meaningful gate
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation
- Designed and delivered a Claims Center module from concept to production rollout
- Regained client trust through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

Tech: Low-code insurance platform, Java, HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on iOS and Android
- Integrated CGM interface into hospital information system (KIS) workflows
- Built stakeholder trust through transparent communication of technical complexity including legacy APIs and external database constraints
- Led a small team under tight deadlines with strict focus on highest-leverage features

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Owned product architecture for backup, restore/checkpoint, and data-encryption modules of a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Designed for zero-technical-knowledge setup under two minutes; served as deputy IT security officer
- Represented the product publicly in English-language business contexts

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built a group-based P2P payments product on a P2P backbone; owned PSP integration, full UX/UI design, and mobile app prototype
- Product later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE (PROXY PRODUCT OWNER) 2019, 2020

- Managed migration of internal webshop to Shopware including complex catalogue and API integration, customisable approval policies, and cross-system data flows

BUNDESDRUCKEREI – COVID-19 DATA PLATFORM (PRODUCT OWNER) 2021, 2021

- RKI projects DIM and DESH; owned secure data structures and identity management requirements

§ LANGUAGES

German, native. English, C2.
