

Philipp Hilbert. *Workflow standardiser who turns project patterns into products.*

Positioning, hands-on Product Manager with ten years building configurable B2B SaaS platforms, now applying that depth to GovTech rule-engine productisation.

§ WHY RULEMAPPING GROUP

Rulemapping sits at the intersection of structured rule logic and scalable delivery infrastructure – a combination that requires someone who can read the gap between a one-off implementation and a reusable module, and then close it systematically. The job description names a concrete metric I find genuinely clarifying: wiederverwendungsrate as a first-class KPI. Most teams talk about reuse as a goal; anchoring it in a measurable rate signals that the team is ready to hold themselves accountable to it. The GovTech context adds a layer of compliance and stakeholder nuance I know from working on FCAS data infrastructure at Rohde & Schwarz and COVID-19 identity management at Bundesdruckerei. *That combination of civic responsibility and engineering rigour is where I do my most focused work.*

§ HONEST FRAMING

Rulemapping's platform is built around rule engines and configuration-driven workflow logic – a domain I have worked adjacent to at Emil Group's InsurTech platform and at the Bundesagentur für Arbeit, but not as the primary product owner of a dedicated rule-engine product. The transferable mechanic is strong: extracting repeatable abstractions from project implementations, designing module boundaries, and measuring reuse rate – all of which I have done in configurable low-code environments with multi-tenant B2B clients.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting and edge-case generation
- **GPT**, structured discovery and stakeholder communication prep
- **Cursor / VSCode**, in-repo spec review and acceptance criteria
- **Claude Code**, in-repo refactors and feature slicing
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy wireframing
- **n8n**, agentic workflow automation
- **Gamma.app**, internal documentation and stakeholder decks

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Delivered production work across Kotlin (Spring Boot), Python, Django, JavaScript, PostgreSQL, MongoDB, Kubernetes, ArgoCD, Argo Workflows, OpenShift, Dagster, dbt, DuckDB, Jenkins, REST APIs, Bitbucket, and low-code platforms with Java and HTML/CSS at their configuration layer.

§ SIDE PROJECT

BACKTEST ENGINE [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Algorithmic backtesting framework for crypto market strategies, built as a personal infrastructure project.

- Implements a file-queue-based execution loop for strategy evaluation across historical tick and OHLCV data.
- Architecture uses a modular agent loop pattern, enabling strategy modules to be swapped without touching the execution core.
- Developed alongside a personal dev-agent framework and live trading automation across Hyperliquid and Bitget.
- Demonstrates the exact abstraction mechanic Rulemapping needs: isolating reusable logic from one-off implementation details.

§ HOW I WOULD WORK AT RULEMAPPING GROUP

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow delivery and partner-facing sessions to map which workflow and rule-set patterns recur most, and where documentation or handoff currently breaks.

WEEK 2

Abstract, slice, validate.

Draft a first abstraction of the highest-frequency module – rule structure, configuration surface, acceptance criteria – and validate the scope with one delivery team member and one partner.

WEEK 3+

Ship, measure, iterate.

Publish the first versioned module with reuse KPIs defined, route it into the partner workflow, and begin the prioritisation conversation with the product team on what moves to the platform roadmap next.

I COVER LETTER

Dear Rulemapping team,

I am writing to apply for the Product Manager role on your No-Code/Low-Code platform. The core task described – extracting repeatable solution modules from project delivery and turning them into standards that unblock partners and enable self-service – is work I have done in substance at multiple employers, and it is the kind of problem I find structurally interesting rather than procedurally routine.

At Emil Group, I managed a B2B InsurTech platform whose entire value proposition was shortening insurance product time-to-market from over a year to under a week. That required constant translation between insurer-specific requirements and generalised module boundaries: product configuration, underwriting logic, policy issuance, document management, workflow automation. The Claims Center module I designed and delivered from concept to production is a direct example of the productisation cycle your posting describes – discovery, abstraction, documentation, rollout. I also introduced structured velocity tracking and a refinement process

that had broken down under delivery pressure, which maps directly to the KPI discipline you name around wiederverwendungsrate and implementation time reduction.

At the Bundesagentur für Arbeit, I owned a data analytics platform where the recurring challenge was turning ad hoc indicator requests from regional labour offices into standardised, automated ETL pipelines. Introducing Dagster for automated indicator generation was a productisation decision: it replaced one-off data transformations with a reproducible, documented pipeline framework that the team could extend without touching the core logic. That is the same mechanic at work in your rule-engine context.

My technical background is broad enough to hold the abstraction layer credibly. I have worked with REST APIs, Kubernetes-based deployment, low-code platform configuration, and, at Rohde & Schwarz, full GitOps rollout of autonomous feature sets in a regulated defence programme context. I am not a software engineer, but I can read a system design, identify the integration surface, and write acceptance criteria that engineers trust. That combination – delivery empathy plus technical fluency – is what makes productisation stick rather than become a documentation exercise.

I am a native German speaker and have been working in Berlin-based B2B SaaS environments for most of my career. The GovTech angle is not new territory: I worked on COVID-19 identity management infrastructure at Bundesdruckerei and on FCAS data infrastructure at Rohde & Schwarz, both of which involved multinational stakeholders, compliance constraints, and the kind of precise, auditable documentation your regulated clients will require. I am available on four weeks' notice and genuinely interested in a conversation.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of experience building configurable B2B SaaS platforms across InsurTech, public-sector analytics, and regulated defence infrastructure. Consistent track record of translating recurring project patterns into documented, reusable modules – from Claims Center design at Emil Group to standardised ETL pipelines at the Bundesagentur für Arbeit. Comfortable reading rule-driven and configuration-heavy systems quickly, writing acceptance criteria engineers trust, and anchoring product decisions in measurable delivery outcomes. AI-native operator with strong stakeholder communication in German and English.

§ CORE STRENGTHS

- Extracting reusable module abstractions from project implementations
- KPI-driven productisation: reuse rate, implementation time, rollout quality
- Low-code and configuration-driven platform product ownership
- Cross-functional alignment across delivery, sales, and engineering stakeholders
- Structured discovery and prioritisation under roadmap constraints
- REST API and integration-surface fluency
- Regulated environment delivery (defence, public sector, health insurance)
- Sprint discipline recovery and backlog restructuring
- German-native communication with institutional and GovTech clients

§ PROFESSIONAL EXPERIENCE

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation on a B2B low-code platform.
- Designed and delivered a Claims Center module from concept to production rollout.
- Re-established sprint discipline and delivery stability; split a 17-person team into smaller Scrum units with clear ownership and deputy structures.
- Reintroduced velocity tracking and structured refinement practices; regained client trust through weekly product workshops.
- Reduced senior developer attrition from near-total to a single departure.

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Public Data Analytics

- Delivered new analytics features including labour shortage indicators, flexible regional comparison, and modernised admin tooling.
- Introduced Dagster for automated ETL and reproducible indicator generation, replacing one-off data transformations with a documented pipeline framework.
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration at build time.
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage.

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout.
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD.
- Improved data quality via filtering, tagging, reproducible transformation pipelines, and audit trails with full data provenance.
- Led a cross-functional team including architect, data scientists, backend and frontend engineers, and QA across a multinational defence programme.

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on iOS and Android.
- Integrated CGM interface into hospital information system workflows.
- Built stakeholder trust through transparent communication of technical complexity with legacy APIs and external databases.

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned backup, restore/checkpoint, and data-encryption product architecture for a quantum-secure one-time-pad encryption product.
- Designed the onboarding UX to require no technical knowledge and enable setup in under two minutes.
- Served as deputy IT security officer.

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payments platform on a P2P backbone; led PSP integration, full UX/UI design, and mobile app prototype.
- Later acquired and operated by Sparkasse.

BUNDESDRUCKEREI 2021

Product Owner, COVID-19 Data Platform

- Delivered secure data structures and identity management for RKI projects DIM and DESH.

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of internal webshop to Shopware, including complex catalogue and API integration and configurable approval policies.
