

Philipp Hilbert. *Agent-workspace PM who closes the gap between discovery and shipped product.*

Positioning, B2B SaaS product leader with 10 years of delivery ownership, ready to consolidate the Immowelt agent experience from legacy debt to modern tooling.

§ WHY IMMOWELT

Immowelt operates at a moment most B2B marketplaces face once: the legacy stack is still running, the modern replacement is half-built, and the agents who generate platform value are stuck in between. The posting is explicit about this – retiring technical debt, migrating agents to a consolidated toolset, and launching a mobile app before end of 2026. That is a concrete programme, not a vague mandate. The dual-track discovery requirement, the north-star metric ownership, and the build-vs-buy architecture conversations are exactly the work I have been doing across regulated and complex B2B environments for the last six years. *That kind of migration-plus-discovery combination is where focused product ownership pays off fastest.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, discovery synthesis and spec drafting
- **Claude Code**, in-repo feature exploration and requirement validation
- **GPT**, stakeholder narrative and structured communication drafts
- **Lovable**, rapid front-end prototyping for user testing
- **Framer**, design-heavy wireframe and flow work
- **Gamma.app**, roadmap and leadership presentations
- **GitHub Copilot**, engineering collaboration and code review literacy

- **n8n**, workflow automation and agentic loop design

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Bitbucket, Git, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, AngularJS, Ionic, Shopware, low-code insurance platforms, CGM API integration.

§ HOW I WOULD WORK AT IMMOWELT

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow account managers on agent calls, pull usage data on the existing Leads Hub and legacy tools, and map where agents drop off between incoming inquiry and response – identifying the two or three friction points that data alone cannot explain.

WEEK 2

Sharpen the backlog.

Run structured sessions with engineering and design to triage the Agent Leads Hub backlog against the migration timeline, separating items that block deprecation from items that are merely nice to have.

WEEK 3+

Ship, validate, deprecate.

Own the first releasable increment of the consolidated workspace, instrument it properly from day one, and begin the stakeholder communication rhythm that keeps the legacy deprecation programme on track toward the GO mobile launch.

I COVER LETTER

Dear Immowelt Product Team,

I am applying for the Senior Product Manager role owning the agent-facing lead management and mobile tooling. The specific combination in this posting – dual-track discovery, a live migration programme, and a mobile app launch deadline – matches the type of work I have done most recently and find most engaging.

At Emil Group I inherited a prototype-stage InsurTech platform where a 17-person team had lost sprint discipline, clients had lost confidence, and delivery had stalled. I restructured the team into smaller Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product workshops to rebuild client trust. Within months the team was shipping consistently and senior developer attrition had dropped to a single departure. The parallel to Immowelt's situation is direct: you have a working product in the agents' hands today, a modern replacement being built in parallel, and a migration that requires both careful sequencing and credible communication to the people whose workflow it disrupts.

At Rohde & Schwarz, working on the FCAS defence data platform, I owned features end-to-end including user stories, acceptance criteria, implementation support, and GitOps-based rollout. I unblocked an infrastructure-level issue in OpenShift that engineers had been unable to resolve for over a year and delivered it in one week. I mention this not to signal heroics but to illustrate that my definition of product ownership includes going deep enough into the technical layer to find what is actually blocking delivery. In agent messaging and call tracking, the same principle applies: understanding API latency, webhook reliability, and mobile notification behaviour well enough to have credible architecture conversations with engineers is what separates roadmap management from genuine product ownership.

At the Federal Employment Agency I owned the Arbeitsmarktmonitor analytics platform including its migration to Kubernetes, CI/CD standardisation, and deputy IT security responsibilities. The stakeholder landscape there – federal government, regional administrations, data science teams, and external auditors – required the same structured communication rhythm that the Immowelt posting describes: aligning engineering, account managers, and senior leadership on a single coherent picture. I introduced Dagster for automated ETL and drove feature delivery that included redesigned dashboards and community tooling, always instrumented for measurability from the start.

On the mobile side, I shipped iOS and Android features at CLINET Platforms for a hospital-facing healthcare app – core flows for chat, document storage, meal and therapy plans – under tight deadlines with a small team and legacy API constraints. Mobile is not a specialisation for me, but it is not unfamiliar territory either.

I am a native German speaker and understand why that matters for a customer-facing product role. The agents using this platform are German-speaking professionals whose vocabulary, workflow expectations, and tolerance for ambiguity in a product are shaped by that context. Conducting site visits, reading support tickets, and synthesising feedback loops requires more than translation; it requires the cultural register that comes with the language natively.

I would welcome the opportunity to discuss the roadmap in more detail.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of delivery ownership across B2B SaaS, government analytics platforms, regulated environments, and founder-level company building. Brings genuine dual-track discovery practice, cross-functional alignment across engineering and senior leadership, and the technical fluency to engage in architecture and build-vs-buy decisions without deferring everything to engineers. Experienced in migrating legacy systems while keeping production workflows running, instrumenting products for measurability from day one, and restructuring delivery teams that have lost velocity. Native German speaker; C2 English.

§ CORE STRENGTHS

- B2B SaaS delivery ownership across full product lifecycle
 - Dual-track discovery and evidenced backlog management
 - Legacy migration planning with parallel team communication
 - iOS and Android mobile product delivery
 - Cross-functional alignment, engineering to senior leadership
 - Independent data querying and hypothesis validation
 - Technical fluency: APIs, GitOps, deployment trade-offs
 - Stakeholder trust rebuilding in prototype-stage environments
 - AI-native rapid prototyping and spec generation
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation, testing, and GitOps rollout

- Unblocked an OpenShift infrastructure issue independently; delivered in one week what engineers had been unable to ship in over a year
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA
- Defined data provenance, audit trails, and evaluation concepts (SafeAI, ExplainableAI) for multinational stakeholders

Tech: Kotlin, Python, PostgreSQL, MongoDB, Kubernetes, Argo Workflows, ArgoCD, OpenShift, Redpanda

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Owned roadmap and delivery for the Arbeitsmarktmonitor, a regional labour market analytics platform
- Defined instrumentation and data lineage requirements; served as Deputy IT Security Officer
- Introduced Dagster for automated ETL and indicator generation, replacing manual pipeline processes
- Delivered labour shortage analytics, flexible regional comparison tooling, and modernised admin features
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration at build time

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Restructured a 17-person team into smaller Scrum units; reintroduced velocity tracking and structured refinement
- Delivered Claims Center module from concept to production, one of several modules across underwriting, policy issuance, and document management
- Rebuilt client trust through structured communication and weekly product workshops in a prototype-stage environment

- Reduced senior developer attrition from near-total to a single departure through delivery stability and clear ownership

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Shipped iOS and Android flows for digital anamnesis, chat, patient document storage, meal and therapy plans
- Integrated CGM interface into hospital information system workflows
- Managed small team under tight deadlines with strict prioritisation of highest-leverage features
- Built stakeholder trust through transparent communication of legacy API and external database constraints

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned backup, restore, checkpoint, and data-encryption product architecture for a quantum-secure OTP product
- Defined setup experience requiring under two minutes with no technical knowledge from end users
- Served as deputy IT security officer; owned attack vector mitigation and security communication

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built group-based P2P payment product including PSP integration, full UX/UI design, and mobile app prototype
- Platform later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware including complex catalogue and API integration and customisable approval policies
