

Philipp Hilbert. *Platform PM bridging engineering, stakeholders, and delivery.*

Positioning, ten years of hands-on product ownership in regulated, high-velocity environments, now ready to scale Ampr's lead-management platform.

§ WHY AMPR / HYPOPORT

Ampr is building what sounds like an operating system for an entire market segment – connecting portals, brokers, banks, and financing providers around a structured lead-management layer. That is an interesting and genuinely hard problem: the network effects only materialise if every node of the marketplace finds the platform indispensable, which means product quality compounds faster than in a single-sided SaaS. The job description is honest about where the team is: a functioning platform entering a growth phase, backlog pressure increasing, and one PM needing a peer who can carry real delivery weight from week one. The call for someone who understands APIs and data flows, can triage bugs versus product opportunities, and keeps ceremonies lean maps directly to the kind of work I have done repeatedly. *That is exactly the environment where pragmatism outweighs process.*

§ HONEST FRAMING

I have not worked inside an Immobilien or lead-marketplace context before. The domain vocabulary – Maklernetzwerke, Finanzierungsvertriebe, Immobilienportale – is new to me. What I do have is a track record of entering unfamiliar regulated B2B markets at speed (InsurTech, health data, defence AI) and reaching productive contribution within two to three weeks by mapping stakeholder structures, reading existing tickets, and asking the right questions before writing new ones.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, spec drafting, edge-case generation, refinement prep
 - **GPT**, research synthesis and stakeholder communication drafts
 - **GitHub Copilot**, in-sprint implementation support
 - **Cursor / VSCode**, LLM-assisted codebase navigation
 - **Lovable**, rapid front-end prototyping
 - **Framer**, design-heavy wireframes and clickable concepts
 - **n8n**, lightweight workflow automation and agent orchestration
 - **Gamma.app**, structured stakeholder presentations
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, OpenShift, Argo Workflows, Dagster, dbt, DuckDB, Jenkins, Bitbucket, Redpanda, MicroStrategy, Shopware, Ionic, CGM API integration, GitOps pipelines.

§ HOW I WOULD WORK AT AMPR

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Read every open and recently closed ticket, sit in on refinement and planning as observer, and map the existing stakeholder communication patterns between engineering, business, and external partners – specifically looking for where lead-flow data and API dependencies create recurring blockers.

WEEK 2

Own the triage.

Take over bug-versus-product-opportunity triage independently, freeing the existing PM from that interrupt load, and propose a lightweight decision rule for the team to use consistently.

Ship and unblock.

Drive first own backlog items to done, introduce one small operations improvement (e.g. a structured refinement template or a shared severity taxonomy), and close the first external stakeholder communication loop alone.

I COVER LETTER

Dear Freyja, Olli, and Maximilian,

Ampr sits at an interesting intersection: a platform that has found product-market fit and now needs to harden its operations to absorb growth without losing the speed that got it there. That is a specific phase, and it needs a specific kind of PM – someone who can carry real delivery weight, keep ceremonies lean, and make decisions without waiting for perfect information. That description fits my working style closely.

Over the past three years I have worked as the sole or lead PM in three consecutive high-pressure B2B environments. At Rohde & Schwarz I owned an AI data platform inside the European FCAS defence programme: multinational stakeholders, hard auditability requirements, and a codebase where infrastructure blockers had been stalling delivery for months. I resolved one critical OpenShift issue independently and delivered the feature the project lead had been requesting from engineers for over a year – in one week. At the Federal Employment Agency I introduced Dagster-based ETL automation, migrated the platform to Kubernetes, and served as Deputy IT Security Officer, all while continuing to advance the product roadmap. At Emil Group I walked into a broken delivery situation – a 17-person team with no sprint discipline, a prototype environment, and clients who had lost trust – and rebuilt velocity by splitting the team, reintroducing ownership concepts, and running structured weekly product workshops until stability returned.

In each case the pattern was the same: read the system fast, find the highest-leverage point, act before having complete information, and communicate clearly enough that stakeholders stay on side while the work happens. I understand technical dependencies and can have a real conversation with engineers about API design, data flow trade-offs, or deployment strategy – not just relay requirements in both directions. That fluency matters at a platform level where the right ticket definition is half the delivery.

On the AI-native side: I use LLM tooling as a daily working environment, not as an experiment. Claude and GPT are part of my spec-writing, edge-case generation, and stakeholder communication preparation. GitHub Copilot and Cursor are part of my in-sprint support loop. This accelerates refinement prep and reduces the back-and-forth between PM and engineering on ambiguous acceptance criteria – something that compounds positively in a small, fast team.

I am based in Berlin, hold full EU work authorisation, and can start with four weeks' notice. I am happy to provide the reference contact you request and look forward to talking with you about the role.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager and Product Owner with close to ten years of experience translating complex operational workflows into scalable software systems. Background spans B2B SaaS, public data platforms, regulated environments, and founder-level company building. Comfortable operating in ambiguity and high-pressure delivery where requirements are incomplete and teams need clarity to move. Fluent in AI-native workflows and capable of meaningful technical conversation with engineering teams on APIs, data flows, and deployment architecture. Low ego, high agency, pragmatic about process.

§ CORE STRENGTHS

- Backlog ownership, triage, and sprint discipline in fast-moving teams
- Cross-functional stakeholder alignment across engineering, business, and users
- API and data-flow comprehension for meaningful engineering collaboration
- Product discovery and prioritisation under incomplete information
- Agile ceremony moderation: refinement, planning, review
- AI-native product execution and rapid prototyping
- Delivery unblocking and infrastructure-level problem solving
- Workshop facilitation and client trust rebuilding
- Founder-level pragmatism and self-directed execution

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager – AI Data Transformation Platform

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature that had been stalled for over a year
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA
- Improved data quality via filtering, tagging, reproducible transformation pipelines, and full data provenance audit trails

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager – Public Data Analytics Platform

- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation, replacing fragile manual processes
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Standardised CI/CD with full test integration at build time

EMIL GROUP 2022

Product Manager – InsurTech SaaS Platform

- Rebuilt sprint discipline and delivery stability in a broken delivery environment; split a bloated 17-person team into smaller, effective Scrum units with clear ownership
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation
- Designed and delivered a Claims Center module from concept to production rollout
- Regained client trust through structured communication and weekly product workshops; reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner – Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
 - Integrated CGM interface into hospital information system workflows
 - Led a small team under tight deadlines with strict focus on highest-leverage features
 - Built stakeholder trust through transparent communication of technical complexity around legacy APIs and external databases
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned backup, restore/checkpoint, and data-encryption product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Designed for setup under two minutes with no technical knowledge required
- Served as Deputy IT Security Officer

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built group-based P2P payment application on a P2P backbone; handled PSP integration, full UX/UI design, and mobile app prototype
- Platform later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware including complex catalogue and API integration and customisable approval policies
-
