

Philipp Hilbert. *Revenue workflow translator for AI-native sales tools.*

Positioning, ten years turning messy operational processes into shipped product – now applied to Salesforce capture, pipeline visibility, and RevOps intelligence.

§ WHY WEFLOW

Weflow is solving a real structural problem: Salesforce data is only as good as what sales reps actually enter, and reps don't enter data because the tool fights them. Automating capture and surfacing deal health removes friction at both ends of that loop. The job description specifically calls for reasoning about where AI adds real value versus noise – that question sits at the intersection of workflow design and product judgment, which is exactly the kind of decision space I have operated in for the past several years. Backed by Gradient Ventures and Cherry Ventures, with 300-plus revenue teams already in production, Weflow is past the hypothesis stage and into the scaling problem. *That is exactly the environment where my strengths compound.*

§ HONEST FRAMING

My direct Salesforce administration experience is limited – I have not owned a Salesforce org or built on the platform's API surface. What I do bring is a strong track record of embedding with operational teams to map how they actually work versus how a tool assumes they work, then translating that into product decisions that stick; I did this in InsurTech, healthcare, and government analytics, and the mechanic transfers directly to RevOps.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, spec drafting and edge-case generation

- **GPT**, research synthesis and user story refinement
 - **GitHub Copilot**, in-repo implementation support
 - **Cursor / VSCode**, AI-assisted development workflows
 - **Lovable**, rapid front-end prototyping
 - **Framer**, design-heavy wireframing and concept validation
 - **Gamma.app**, stakeholder presentation and narrative structure
 - **n8n**, multi-agent and agentic workflow automation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Django, JavaScript, PostgreSQL, MongoDB, Kotlin (Spring Boot), REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, Git, Bitbucket, AngularJS, Ionic, HTML/CSS, Java.

§ SIDE PROJECT

CRYPTO BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Building an infrastructure-layer backtesting and agent framework for algorithmic crypto trading strategies.

- Implements order execution simulation across CEX and DEX mechanics, including perpetual funding rates, liquidation logic, and slippage modelling.
 - File-queue-based agent loop architecture, designed for reproducibility and auditability of strategy runs.
 - Integrates with market microstructure data sources including Coinglass and Hyblock Capital for liquidation heatmap analysis.
 - Demonstrates the same data provenance and audit-trail discipline I applied to the FCAS AI platform – directly relevant to Weflow's pipeline data integrity problem.
-

§ HOW I WOULD WORK AT WEFLOW

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow two to three sales reps and one RevOps owner through their actual Salesforce workflows, document where data entry breaks down, and map the gap between what the system expects and what reps actually do.

WEEK 2

Slice and validate.

Present the workflow map to engineering and design, identify the highest-friction capture point, and define a testable slice small enough to validate the AI approach within the sprint.

WEEK 3+

Ship and close loops.

Drive the first feature through acceptance, release it to a subset of users, and instrument the one metric that tells whether capture quality actually improved.

I COVER LETTER

Dear Janis, dear Philipp,

Sales data quality is a workflow problem before it is a technology problem. Reps skip fields not out of laziness but because the entry moment is always wrong – mid-call, post-meeting, end of a long Friday. Weflow's bet is that AI capture removes the entry moment entirely, and that is a product bet I find genuinely compelling. The question of where AI adds real value versus noise is one I have had to answer in high-stakes environments before, and I would like to bring that judgment to your team.

At Rohde & Schwarz, I owned a data management platform for the FCAS programme where the core challenge was identical in structure: multimodal data arriving from many sources, quality that varied by contributor discipline, and downstream ML training that failed silently when inputs were bad. I built filtering, tagging, and audit-trail pipelines that made data provenance visible and actionable, and delivered those features end-to-end – from user stories through GitOps rollout – in an environment where stakeholders were multinational, requirements were incomplete, and timelines were not flexible. That experience gave me a precise feel for the difference between AI features that genuinely reduce cognitive load and AI features that produce confident-looking noise.

At Emil Group, I stepped into a prototype-stage InsurTech platform where sprint discipline had collapsed under delivery pressure. A 17-person team was moving in circles. I split it into focused Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product

workshops to rebuild client trust. Within a quarter the team was shipping again and senior developer attrition had dropped from near-total to one departure. I mention this because Weflow is at the scaling stage where team structure and delivery rhythm start to matter as much as product direction, and I know what it takes to hold both.

At the Federal Employment Agency I led a public analytics platform – Arbeitsmarktmonitor – where the users were regional economists and policy analysts who knew their domain far better than any product team could. I learned to interview for workflows rather than features, to distinguish what users ask for from what they actually need, and to make prioritisation decisions that held up under scrutiny from stakeholders who would challenge them. That discipline translates directly to the RevOps and sales rep conversations Weflow needs someone to have.

I am based in Berlin, available within four weeks, and genuinely interested in what you are building. I would welcome a direct conversation about the product area you have in mind and the biggest open questions on the roadmap.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of experience translating complex operational workflows into scalable software systems. Background spans AI data platforms, B2B SaaS, analytics infrastructure, regulated environments, and founder-level company building. Comfortable in ambiguity and high-pressure delivery, where requirements are incomplete and teams need clarity to move. Fluent in AI-native workflows including LLM-assisted development, rapid prototyping, and autonomous feature delivery. Brings a structured discovery approach – mapping how users actually work before defining what to build – and a track record of holding delivery rhythm and stakeholder trust simultaneously.

§ CORE STRENGTHS

- Mapping messy operational workflows into dev-ready requirements
- AI feature design: value versus noise judgment under real constraints
- End-to-end ownership from discovery through GitOps rollout
- Cross-functional alignment across engineering, data science, QA, and business

- Sprint discipline and team structure in high-pressure delivery
 - Data quality, provenance, and auditability in AI/ML pipelines
 - Technical fluency across modern backend and infrastructure stacks
 - User research with domain-expert operators (RevOps, analysts, clinicians)
 - Founder-level pragmatism, low ego, high agency
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned data capture, quality, and auditability for a multimodal AI platform – same core problem Weflow solves for Salesforce data, different domain
- Built filtering, tagging, and reproducible transformation pipelines with full data provenance and audit trails (SafeAI, ExplainableAI concepts)
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout via ArgoCD
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA across multinational stakeholders
- Unblocked a year-long infrastructure blocker independently, delivered in one week

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Advanced Arbeitsmarktmonitor, an analytics platform for regional labour market data used by policy analysts and economists
- Delivered labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration
- Designed interactive dashboards and community features (groups, networks, events)
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned product for a B2B InsurTech platform serving primary insurers, reinsurers, MGAs, brokers, and underwriters

- Designed and delivered Claims Center module from concept to production rollout
- Rebuilt sprint discipline: split a bloated 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement
- Regained client trust in a prototype-stage environment through weekly product workshops and structured stakeholder communication
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient flows: digital anamnesis, meal and therapy plans, transport, chat, and document storage on iOS and Android
- Integrated CGM interface into hospital information system workflows
- Built stakeholder trust through transparent communication of technical complexity (legacy APIs, external databases)

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Setup time under two minutes, no technical knowledge required – designed entirely around user workflow, not cryptographic complexity
- Served as deputy IT security officer; presented product publicly in English at partner events

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payments product on a P2P backbone; owned PSP integration, UX/UI design, and mobile app prototype
- Later acquired and operated by Sparkasse

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO, Head of HR

- Established digital tooling, financial planning, and investor relations for a vertical indoor farming technology company
