

Philipp Hilbert. *Senior Product Manager, InsurTech SaaS.*

Positioning, returning to EMIL with institutional knowledge of the platform, the clients, and the delivery culture – ready to own a domain from day one.

§ WHY EMIL

I was part of EMIL's product team in 2022 and saw first-hand how the platform compresses insurance product time-to-market from over a year to under a week. That asymmetry between complexity and speed is genuinely hard to build, and it is the thing worth protecting. The job description names workflow engines such as n8n explicitly for the Collaborative Tools track – I have built agentic automation pipelines with n8n and understand exactly where the orchestration complexity lives. *That is the kind of problem I think about anyway.*

§ HONEST FRAMING

The three tracks on offer span Accounting, Data, and Collaborative Tools; my direct EMIL experience was closest to Collaborative Tools and general platform delivery, not ledger reconciliation or analytics infrastructure in an insurance context specifically. The transferable mechanic is strong: I have owned ETL data platforms at the Federal Employment Agency and payment flow architecture at Kvitt, so the domain logic translates even if the insurance-accounting framing is new.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, structured prompts for specs, edge-case generation, and stakeholder summaries

- **GPT**, user-research synthesis and rapid document drafting
 - **Cursor / VSCode**, LLM-assisted development and in-repo exploration
 - **n8n**, automated pipelines and agentic workflow orchestration
 - **Lovable**, rapid front-end prototyping before engineering cycles open
 - **Framer**, design-heavy wireframes and stakeholder demos
 - **Gamma.app**, structured presentation and roadmap communication
 - **GitHub Copilot**, feature delivery support and acceptance-criteria validation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Java, Kotlin (Spring Boot), Python, Django, JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, Docker, Bitbucket, Git, CGM API integration, low-code platform tooling, Shopware, Ionic, AngularJS.

§ HOW I WOULD WORK AT EMIL

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the target domain team through one full sprint cycle, read every open requirement doc and client feedback ticket, and map the gap between what is written and what engineering actually builds.

WEEK 2

Sharpen the backlog.

Rewrite the three to five most-ambiguous backlog items into acceptance-criteria-complete user stories and validate them with one engineer and one client-facing stakeholder before they hit refinement.

WEEK 3 +

Ship, close loops.

Own the first feature release in the domain, run a structured retrospective on the delivery process, and establish a lightweight feedback pipeline – automated where n8n or a prompt chain can replace a manual step.

I COVER LETTER

Dear EMIL team,

I was part of EMIL's product team in 2022, which means I am not writing to introduce myself to the platform – I am writing to return to it with three additional years of depth. In that time I have owned a government AI data platform at Rohde & Schwarz inside the FCAS programme, advanced a public labour-market analytics product at the Federal Employment Agency, and built agentic automation workflows independently. The problems EMIL is now hiring for – workflow automation, data accessibility, accounting process design – are precisely the areas those three years sharpened.

The Collaborative Tools and Workflows track maps most directly to what I have built. At Rohde & Schwarz I delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout via ArgoCD. I unblocked infrastructure issues independently that a full engineering team had left open for a year, and I delivered the solution in one week. At the Federal Employment Agency I introduced Dagster for automated ETL and indicator pipelines, migrated legacy systems to Kubernetes, and served as Deputy IT Security Officer. Both roles required translating complex operational processes into clean, dev-ready requirements – exactly what insurance workflow tooling demands.

At EMIL in 2022 I rebuilt sprint discipline from near-collapse: split a 17-person team into focused Scrum units, reintroduced velocity tracking, ran weekly product workshops that rebuilt client trust, and reduced senior developer attrition from near-total to a single departure. I know that delivering inside an InsurTech B2B SaaS platform is not just a product challenge – it is a stakeholder trust challenge, and I have done the repair work.

On AI fluency: I use Claude, GPT, and Cursor daily for spec generation, edge-case identification, and requirements drafting. I have built multi-step agentic pipelines in n8n. I prototype rapidly in Lovable and Framer before engineering cycles open. These are not credentials I list – they are the actual mechanics of how I work, and I can show the artifacts.

German is my native language and English is C2; I am comfortable presenting in both to leadership, clients, and regulators. I am based in Berlin, familiar with the team culture, and available within four weeks of an offer.

I would welcome a conversation about which of the three tracks is the strongest fit.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with close to ten years of experience translating complex operational workflows into scalable B2B SaaS systems. Previously part of the EMIL product team; delivered platform modules spanning product configuration, underwriting, document management, and workflow automation for primary insurers, reinsurers, MGAs, and brokers. Subsequent roles deepened capability in ETL data platforms, AI system delivery, and agentic automation. Comfortable operating in ambiguity, strong on delivery discipline, and fluent in AI-native workflows from prototyping through production rollout.

§ CORE STRENGTHS

- End-to-end product ownership in B2B SaaS and InsurTech platforms
 - Translating complex operational workflows into dev-ready requirements
 - Agile team restructuring and sprint discipline recovery
 - AI-native execution: agentic pipelines, LLM-assisted specs, rapid prototyping
 - ETL and data platform product ownership
 - Cross-functional stakeholder alignment across engineering, QA, clients, and leadership
 - Client trust management in prototype-stage and regulated environments
 - GitOps and infrastructure fluency enabling independent unblocking
 - German-native communication precision across technical and business audiences
-

§ PROFESSIONAL EXPERIENCE

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Designed and delivered a Claims Center module from concept to production rollout

- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation for primary insurers, reinsurers, MGAs, brokers, and underwriters
- Re-established sprint discipline and delivery stability; split a bloated 17-person team into smaller, effective Scrum units and introduced ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Improved data quality via filtering, tagging, reproducible data transformation pipelines, and audit trails with full data provenance
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature that had been requested from engineers for over a year
- Led a cross-functional team including architect, data scientists, backend and frontend engineers, and QA
- Enabled ML training and evaluation on curated datasets with transparent evaluation concepts (SafeAI, ExplainableAI)

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Introduced Dagster for automated ETL and indicator generation across regional labour market data
- Delivered labour shortage analytics, flexible regional comparison tooling, and modernised admin interfaces
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

- Standardised CI/CD with full test integration at build time
- Designed interactive dashboards, community features, and structured data export tooling

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Bitbucket, Git

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage across iOS and Android
- Integrated CGM interface into hospital information system workflows
- Built stakeholder trust through transparent communication of technical complexity involving legacy APIs and external databases
- Led a small team under tight deadlines with strict focus on highest-leverage features

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built group-based P2P payments on a P2P backbone; designed full UX/UI and mobile app prototype
- Integrated PSP, handled payment flow edge cases, and took the product through acquisition and operation by Sparkasse

QCRYPT AG 2016, 2018

Product Owner

- Owned backup, restore/checkpoint, and data-encryption product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Served as deputy IT security officer; USP: full setup under two minutes, no technical knowledge required from end user

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of internal webshop to Shopware including complex catalogue and API integration and customisable approval policies

Product Owner

- Delivered secure data structures and identity management for RKI projects DIM and DESH
