

Philipp Hilbert. *Senior Product Manager, InsurTech SaaS.*

Positioning, returning to EMIL with institutional knowledge of the platform, the clients, and the delivery culture – ready to own a domain from day one.

Dear EMIL team,

I was part of EMIL's product team in 2022, which means I am not writing to introduce myself to the platform – I am writing to return to it with three additional years of depth. In that time I have owned a government AI data platform at Rohde & Schwarz inside the FCAS programme, advanced a public labour-market analytics product at the Federal Employment Agency, and built agentic automation workflows independently. The problems EMIL is now hiring for – workflow automation, data accessibility, accounting process design – are precisely the areas those three years sharpened.

The Collaborative Tools and Workflows track maps most directly to what I have built. At Rohde & Schwarz I delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout via ArgoCD. I unblocked infrastructure issues independently that a full engineering team had left open for a year, and I delivered the solution in one week. At the Federal Employment Agency I introduced Dagster for automated ETL and indicator pipelines, migrated legacy systems to Kubernetes, and served as Deputy IT Security Officer. Both roles required translating complex operational processes into clean, dev-ready requirements – exactly what insurance workflow tooling demands.

At EMIL in 2022 I rebuilt sprint discipline from near-collapse: split a 17-person team into focused Scrum units, reintroduced velocity tracking, ran weekly product workshops that rebuilt client trust, and reduced senior developer attrition from near-total to a single departure. I know that delivering inside an InsurTech B2B SaaS platform is not just a product challenge – it is a stakeholder trust challenge, and I have done the repair work.

On AI fluency: I use Claude, GPT, and Cursor daily for spec generation, edge-case identification, and requirements drafting. I have built multi-step agentic pipelines in n8n. I prototype rapidly in Lovable and Framer before engineering cycles open. These are not credentials I list – they are the actual mechanics of how I work, and I can show the artifacts.

German is my native language and English is C2; I am comfortable presenting in both to leadership, clients, and regulators. I am based in Berlin, familiar with the team culture, and available within four weeks of an offer.

I would welcome a conversation about which of the three tracks is the strongest fit.

Best regards, *Philipp Hilbert*
