

Philipp Hilbert. *Senior Product Owner, Mobile & Digital Services.*

Positioning, a decade of end-to-end product ownership across mobile, regulated platforms, and cross-functional stakeholder networks, ready to own ADAC's digital member journeys.

§ WHY ADAC

ADAC's digital portfolio spans an unusually wide surface — self-services, roadside assistance, mobility, travel, insurance, and loyalty — all funnelled through mobile touchpoints that millions of members rely on daily. The job description explicitly calls for ownership across App, mobile web, and Wallet solutions while coordinating with Pannenhilfe, Versicherungen, Gesundheit, and Vertrieb simultaneously, which matches exactly how I have operated in every senior role: as the person who holds the thread between business units that otherwise talk past each other. The combination of a membership-critical product, complex cross-departmental dependencies, and the ambition to modernise digital journeys is the kind of challenge where structured product thinking compounds quickly. *That is precisely the environment where a PM who is equally fluent in user stories and legacy API constraints earns their keep.*

§ HONEST FRAMING

My direct mobile product experience comes from a hospital patient app (iOS/Android, Ionic/AngularJS) and the full UX design of a consumer P2P payment mobile prototype, not from a consumer-scale app with millions of downloads. The transferable mechanic is strong nonetheless: I have owned end-to-end delivery in regulated, multi-stakeholder environments, rebuilt sprint discipline on fractured teams, and translated complex backend constraints into coherent mobile flows — the core skill set this role demands.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, spec drafting, edge-case generation, backlog refinement
- **GPT**, discovery synthesis and stakeholder document generation
- **GitHub Copilot**, in-sprint implementation support
- **Cursor / VSCode**, codebase navigation and feature delivery
- **Lovable**, rapid mobile and web prototype generation
- **Framer**, design-heavy interaction prototyping
- **Gamma.app**, stakeholder presentation and roadmap decks
- **n8n**, agentic workflow automation and process prototyping

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, Ionic, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, GitOps pipelines, dbt, Dagster, DuckDB, MicroStrategy, CGM API integration, Shopware, Java, HTML/CSS, low-code insurance platforms, Redpanda.

§ SIDE PROJECT

BACKTEST ENGINE & DEV-AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Personal infrastructure project: a crypto backtesting engine built alongside a custom multi-agent developer framework.

- Implements a file-queue-based agent loop for autonomous code generation and test execution.
- Architecture separates strategy logic from execution connectors, allowing clean swaps between venues.
- Built to validate algorithmic trading ideas across Hyperliquid, Jupiter, and centralised exchange data feeds.
- Demonstrates the systems-thinking and autonomous delivery approach I bring to complex mobile product backends.

§ HOW I WOULD WORK AT ADAC

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the existing Scrum ceremonies, read every epic and open story in the current backlog, interview one stakeholder from each of the named departments – Pannenhilfe, Loyalty, Versicherungen – and produce a written dependency and gap map by end of week.

WEEK 2

Prioritise, slice, align.

Take the top three contested backlog items and run a structured refinement session: clear acceptance criteria, explicit assumptions, one-sentence risk flag per story; align with engineering on feasibility before the next sprint kickoff.

WEEK 3+

Ship, unblock, iterate.

Own the first sprint review end-to-end, close at least one stalled item that had been blocked by stakeholder ambiguity, and present an updated roadmap view to the relevant Fachabteilungen with clear next-quarter priorities.

I COVER LETTER

Dear ADAC Hiring Team,

ADAC's mobile products sit at the intersection of urgent member needs – a breakdown on the motorway at 2 a.m. – and a sprawling service portfolio covering insurance, travel, health, and loyalty. That combination demands a Product Owner who can hold structural clarity across a wide stakeholder landscape while keeping delivery moving. That is the role I have played repeatedly over the past decade.

At Emil Group I inherited a fractured 17-person Scrum team on a B2B InsurTech platform, rebuilt sprint discipline, split the team into effective working units, re-introduced velocity tracking, and re-established client trust through structured weekly workshops – all within a single quarter. The context was different from automotive assistance, but the underlying problem is identical to what large digital product organisations face: too many stakeholders, unclear ownership, and a backlog that reflects political compromises rather than user value. At

Rohde & Schwarz I owned end-to-end feature delivery on a government-grade AI data platform within the FCAS programme, coordinating architects, data scientists, backend and frontend engineers, and QA across multinational teams. I reduced deployment cycles from several days to under 40 minutes by introducing GitOps with ArgoCD – a concrete example of how I treat infrastructure friction as a product problem, not an engineering-only concern.

My mobile product experience comes from CLINET Platforms, where I built a patient-facing iOS/Android app covering digital anamnesis, meal planning, therapy scheduling, transport, and document management. The challenge there was representing complex legacy hospital APIs (CGM/KIS) as simple, reassuring mobile flows for patients who were already stressed. I led a small team under tight deadlines, maintained transparent communication with hospital stakeholders about technical constraints, and kept scope ruthlessly focused on the highest-leverage features. The skill set transfers directly to ADAC's self-service and mobility journeys.

ADAC's cross-departmental scope – from Pannenhilfe and Versicherungen to Gesundheit and Vertrieb – is not a complication I want to avoid; it is the kind of environment where structured product ownership creates the most visible value. I am fluent in running stakeholder workshops with non-technical audiences, writing epics that engineering can execute without a follow-up meeting, and surfacing the dependency risks before they become sprint blockers. I also bring a modern AI-native working style: I use Claude and GPT to accelerate discovery synthesis and spec generation, Lovable and Framer for rapid mobile prototyping, and agentic workflow tools to automate the repeatable coordination overhead that slows product teams down.

I am based in Berlin, fully open to relocating to Munich, and available within four weeks of an offer. I would welcome the chance to discuss the current product priorities and how I can contribute from day one.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Senior Product Owner with nearly ten years of experience owning digital products end-to-end in regulated, multi-stakeholder environments. Has led mobile app delivery (iOS/Android), rebuilt Scrum discipline on large cross-functional teams, and managed backlog ownership across insurance, healthcare, public-sector analytics, and defence-grade AI platforms. Operates with founder-level agency: comfortable holding ambiguity, surfacing blockers early, and keeping delivery stable when requirements shift. Fluent in AI-native tooling and modern DevOps workflows; equally credible in a refinement session and a stakeholder boardroom.

§ CORE STRENGTHS

- Mobile product ownership across iOS, Android, and mobile web
- Cross-departmental stakeholder alignment and structured communication
- Backlog architecture: Epics, Features, User Stories, acceptance criteria
- Sprint discipline, velocity tracking, and team restructuring
- Regulated product environments (insurance, health, public sector)
- End-to-end delivery ownership, user story to GitOps rollout
- AI-native prototyping and rapid discovery synthesis
- Workshop facilitation with technical and non-technical audiences
- Founder-level pragmatism: low ego, high agency, clear priorities

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Led cross-functional team (architect, data scientists, backend/frontend engineers, QA) under multinational stakeholder governance for the FCAS defence programme.
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout.
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD.
- Unblocked OpenShift infrastructure issues independently; delivered in one week a feature that had been stalled with engineers for over a year.
- Responsible for data transformation, transparency, and auditability with multinational stakeholders.

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor analytics platform, delivering labour shortage analytics, flexible regional comparison tooling, and modernised admin interfaces.
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration.
- Served as Deputy IT Security Officer (IT-SV) with focus on compliance, governance, and data lineage.
- Introduced Dagster for automated ETL and indicator generation.

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned backlog across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation on a B2B InsurTech platform.
- Designed and delivered a Claims Center module from concept to production rollout.
- Re-established sprint discipline; split a bloated 17-person team into smaller, focused Scrum units with clear ownership and deputy concepts.
- Reintroduced velocity tracking and structured refinement practices; regained client trust through weekly product workshops.
- Reduced senior developer attrition from near-total to a single departure.

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Built a mobile-first patient app for hospitals (iOS and Android) covering digital anamnesis, meal and therapy plans, transport, chat, and document storage.
- Integrated CGM interface into hospital information system (KIS) workflows, translating legacy API constraints into clean mobile UX.
- Led a small team under tight deadlines with strict prioritisation on highest-leverage features.
- Maintained stakeholder trust through transparent communication of technical complexity across legacy systems and external databases.

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware.
- Drove backup, restore/checkpoint, and encryption product design; key USP was setup under two minutes with no technical knowledge required.
- Served as deputy IT security officer with focus on attack vector mitigation.

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payment product on a P2P backbone, later acquired and operated by Sparkasse.
- Owned full UX/UI design, PSP integration, and mobile app prototype.

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO, CFO & Project Lead

- Established digital tooling, financial and investment planning, and ERP introduction across multiple roles.
- Managed investor relations and nanotechnology development.
