

Philipp Hilbert. *Senior Product Owner, Mobile & Digital Services.*

Positioning, a decade of end-to-end product ownership across mobile, regulated platforms, and cross-functional stakeholder networks, ready to own ADAC's digital member journeys.

Dear ADAC Hiring Team,

ADAC's mobile products sit at the intersection of urgent member needs – a breakdown on the motorway at 2 a.m. – and a sprawling service portfolio covering insurance, travel, health, and loyalty. That combination demands a Product Owner who can hold structural clarity across a wide stakeholder landscape while keeping delivery moving. That is the role I have played repeatedly over the past decade.

At Emil Group I inherited a fractured 17-person Scrum team on a B2B InsurTech platform, rebuilt sprint discipline, split the team into effective working units, re-introduced velocity tracking, and re-established client trust through structured weekly workshops – all within a single quarter. The context was different from automotive assistance, but the underlying problem is identical to what large digital product organisations face: too many stakeholders, unclear ownership, and a backlog that reflects political compromises rather than user value. At Rohde & Schwarz I owned end-to-end feature delivery on a government-grade AI data platform within the FCAS programme, coordinating architects, data scientists, backend and frontend engineers, and QA across multinational teams. I reduced deployment cycles from several days to under 40 minutes by introducing GitOps with ArgoCD – a concrete example of how I treat infrastructure friction as a product problem, not an engineering-only concern.

My mobile product experience comes from CLINET Platforms, where I built a patient-facing iOS/Android app covering digital anamnesis, meal planning, therapy scheduling, transport, and document management. The challenge there was representing complex legacy hospital APIs (CGM/KIS) as simple, reassuring mobile flows for patients who were already stressed. I led a small team under tight deadlines, maintained transparent communication with hospital stakeholders about technical constraints, and kept scope ruthlessly focused on the highest-leverage features. The skill set transfers directly to ADAC's self-service and mobility journeys.

ADAC's cross-departmental scope – from Pannenhilfe and Versicherungen to Gesundheit and Vertrieb – is not a complication I want to avoid; it is the kind of environment where structured product ownership creates the most visible value. I am fluent in running stakeholder workshops with non-technical audiences, writing epics that engineering can execute without a follow-up meeting, and surfacing the dependency risks before they become sprint blockers. I also bring a modern AI-native working style: I use Claude and GPT to accelerate discovery synthesis and spec generation, Lovable and Framer for rapid mobile prototyping, and agentic workflow tools to automate the repeatable coordination overhead that slows product teams down.

I am based in Berlin, fully open to relocating to Munich, and available within four weeks of an offer. I would welcome the chance to discuss the current product priorities and how I can contribute from day one.

Best regards, *Philipp Hilbert*
