

Philipp Hilbert. *Operational product manager who ships, not just specifies.*

Positioning, ten years of translating complex operational workflows into scalable software, now applied to cyber and insurance.

§ WHY BAOBAB

InsurTech is one of the few verticals where operational complexity, regulatory constraints, and the demand for speed genuinely collide – and Baobab's stated mission to compress insurance product time-to-market is exactly the problem worth solving. The job description calls out ownership of policy administration configuration, underwriting rules, and document templates as core PM work, which is precisely the kind of structured logic ownership I exercised at Emil Group, where I delivered a Claims Center module from concept to production and rebuilt sprint discipline around a bloated 17-person team. The explicit expectation that you can debug API payloads without pulling in an engineer is not a nice-to-have here; it is table stakes, and that matches how I have worked across every role. *That is the kind of environment where moving fast and being precise are the same thing.*

§ HONEST FRAMING

My direct experience in cyber insurance as a product domain is limited; my InsurTech background is in the policy administration and workflow automation layer rather than in cyber risk modelling or underwriting methodology. The transferable mechanic is strong: I have owned end-to-end delivery of insurance platform modules – quoting, policy issuance, claims, document management – and I pick up domain logic quickly by working directly with operations and underwriting teams.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, edge-case generation, spec review
- **GPT**, research synthesis and workflow documentation
- **GitHub Copilot**, in-editor code assistance and acceptance criteria validation
- **Cursor / VSCode**, LLM-assisted development environment
- **Lovable**, rapid front-end prototyping
- **n8n**, multi-agent workflow automation
- **Gamma.app**, stakeholder presentations and discovery artefacts
- **Framer**, interactive prototypes for user testing

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Django, JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Bitbucket, Git, dbt, Dagster, DuckDB, Kotlin (Spring Boot), Redpanda, MicroStrategy, AngularJS, Ionic, CGM API integration, low-code insurance platform configuration, Shopware, Docker.

§ SIDE PROJECT

CRYPTO DEV AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

A personal infrastructure project building an autonomous development agent loop and a backtesting engine for crypto market strategies.

- Implements a file-queue-based agent loop that routes tasks to specialised sub-agents for code generation, testing, and deployment.
- Architecture uses Python orchestration with LLM-driven task decomposition and structured output validation.
- Active development with iterative backtesting modules covering perpetual futures, spot DEX routing, and liquidation heatmap analysis.
- Demonstrates the same agentic workflow and automation thinking that Baobab is looking for in AI-assisted internal tooling and process automation.

§ HOW I WOULD WORK AT BAOBAB

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow quoting, policy management, and renewals workflows end-to-end, mapping every manual handoff and every place where someone pastes something into a spreadsheet that should be a system event.

WEEK 2

Prioritise and specify.

Take the two or three highest-friction handoffs identified in week 1, write structured process flows and acceptance criteria, and validate them with the operations team before touching the platform.

WEEK 3+

Configure, ship, measure.

Begin configuring the policy administration platform for the first automation slice, instrument the change with a measurable baseline, and close the loop with a documented retrospective.

I COVER LETTER

Dear Baobab team,

I came across the Product Manager role at Baobab Risk Solutions and read the description carefully. What stood out was not the list of tools or the seniority level but the framing of the work itself: defining the logic is the product. That is exactly how I have approached PM work for the past decade, and it is a harder philosophy to find in job descriptions than it should be.

My most directly relevant experience is at Emil Group, where I joined a B2B InsurTech platform mid-delivery. The product covered the full insurance lifecycle – product configuration, pricing, underwriting, policy issuance, document management, and workflow automation. I delivered a Claims Center module from concept to production, re-established sprint discipline after the team had lost it under delivery pressure, and rebuilt client trust through structured weekly workshops. The platform served primary insurers, reinsurers, MGAs, and brokers, which means I have worked directly with the operational complexity that Baobab is trying to systematise. I know what it means to own underwriting rule configuration, document template logic, and

permission structures inside a policy administration platform, and I know how quickly that work stalls if the PM cannot hold the business logic clearly without engineering scaffolding.

On the technical side, I have always worked close to the implementation layer. At Rohde & Schwarz I independently unblocked an OpenShift infrastructure issue and delivered a feature in one week that the project lead had been requesting from engineers for over a year. At the Federal Employment Agency I served as Deputy IT Security Officer, standardised CI/CD pipelines, and migrated legacy systems to Kubernetes while shipping new analytics features in parallel. I am comfortable querying databases, reading and debugging API payloads, and specifying integrations in enough detail that engineers can start without a back-and-forth. That is not a claim about being a developer; it is a claim about not needing a translator for every technical conversation.

The AI-native workflow piece is genuine. I use Claude, GPT, and GitHub Copilot daily for requirements drafting, acceptance criteria generation, and edge-case identification. I have built a personal multi-agent framework using n8n and file-queue-based agent loops, and I have used Lovable and Framer for rapid prototyping that I can put in front of stakeholders within hours of a discovery conversation. I understand how LLMs can be applied to operational workflow automation not as a theoretical matter but as something I build with week to week.

The cyber insurance domain is new to me, and I will name that directly. My InsurTech background is in the platform and operations layer rather than in cyber risk modelling. What I bring is the operational PM execution the role requires: structured discovery, hands-on platform configuration, automation design, and the discipline to close delivery loops with data. I learn domain logic fast when I can work directly with underwriters and operations, which is how I have operated in every regulated environment I have been in.

I would welcome a conversation about where the biggest operational bottlenecks sit right now and whether my background is the right fit for working through them.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager with nearly ten years of experience translating complex operational workflows into scalable software systems. At Emil Group I owned end-to-end delivery on a B2B InsurTech platform covering product configuration, underwriting, policy issuance, claims, and document management. Comfortable operating close to the implementation layer: I query databases,

debug API payloads, and configure business logic without needing engineering support for every step. Fluent in AI-native workflows including LLM-assisted development, rapid prototyping with Lovable and Framer, and multi-agent automation with n8n. Low ego, high agency, oriented toward closing loops with data.

§ CORE STRENGTHS

- Translating operational workflows into structured, dev-ready requirements
 - Insurance platform configuration: underwriting rules, product attributes, document templates
 - Hands-on technical fluency: SQL, REST APIs, system integrations, CI/CD
 - AI-native product execution and agentic workflow automation
 - Sprint discipline, backlog ownership, and delivery stability under pressure
 - Cross-functional alignment across engineering, operations, and compliance
 - Rapid prototyping to validate ideas before committing engineering capacity
 - Data-informed decision-making and feature impact measurement
 - Founder-level pragmatism: direct, low-hierarchy, ownership-oriented
-

§ PROFESSIONAL EXPERIENCE

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation on a B2B InsurTech platform.
- Designed and delivered a Claims Center module from concept to production rollout.
- Configured insurance products and workflows including product attributes, permissions, underwriting rules, and document templates in the platform's policy administration layer.
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops.
- Re-established sprint discipline; split a bloated 17-person team into smaller Scrum units with clear ownership and deputy concepts.
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure.
- Reduced senior developer attrition from near-total to a single departure.

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout.
- Independently unblocked OpenShift infrastructure issues; delivered in one week a feature the project lead had been requesting from engineers for over a year.
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD.
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA.
- Improved data quality via filtering, tagging, reproducible transformation pipelines, and audit trails with full data provenance.
- Responsible for data transparency and auditability with multinational stakeholders.

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new analytics features including labour shortage analysis, flexible regional comparison, and modernised admin tooling.
- Introduced Dagster for automated ETL and indicator generation, replacing manual pipeline work.
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage.
- Migrated legacy systems to Kubernetes and managed major system upgrades.
- Standardised CI/CD with full test integration at build time.

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core patient flows including digital anamnesis, meal and therapy plans, transport, chat, and document storage on iOS and Android.
- Integrated CGM interface into hospital information system workflows, navigating legacy APIs and external database constraints.
- Built stakeholder trust through transparent communication of technical complexity under tight deadlines.

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for backup, restore/checkpoint, and data-encryption modules of a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware.
- Served as deputy IT security officer; responsible for attack vector mitigation and security compliance.
- Designed for setup under two minutes with no technical knowledge required.

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payment product on a P2P backbone, including PSP integration and full UX/UI design.
- Delivered a mobile app prototype; product later acquired and operated by Sparkasse.

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO & Head of HR / CFO & Project Lead

- Established full digital tooling, financial planning, ERP introduction, and investor relations for an agri-tech startup.
