

Philipp Hilbert. *Scrum Product Owner with deep engineering context.*

Positioning, hands-on PM with nearly ten years of backlog ownership, microservice environments, and cross-functional delivery who brings real development experience to stakeholder and sprint work.

§ WHY PŸUR

PŸUR operates large-scale distributed systems under continuous commercial pressure, which means product decisions carry immediate infrastructure consequences – the kind of environment where shallow requirements fail fast and visible. The job description explicitly calls for microservice architecture fluency as a prerequisite, not a bonus, and that matches exactly how I have worked across FCAS, the Bundesagentur, and Emil Group. Working at scale in a regulated, infrastructure-heavy domain with multiple POs aligning across a roadmap is the operating model I function best in. *That is exactly the environment where my strengths compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, spec drafting and acceptance-criteria generation
- **GPT**, stakeholder communication and summary work
- **GitHub Copilot**, in-editor implementation support
- **Cursor / VSCode**, codebase navigation and refactors
- **Gamma.app**, roadmap and stakeholder presentations
- **n8n**, workflow automation and agent orchestration
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy mock-ups and demo flows

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, JavaScript, PostgreSQL, MongoDB, Redpanda, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Django, dbt, Dagster, DuckDB, Jenkins, Bitbucket, REST APIs, AngularJS, Ionic, MicroStrategy, Docker, GitOps pipelines, Jira, Confluence.

§ HOW I WOULD WORK AT PÿUR

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Sit with each stakeholder group to map the current requirement flow from business ask to story-ready ticket, identify where handoffs lose information, and audit the existing backlog for clarity and prioritisation logic against stated company priorities.

WEEK 2

Slice and sharpen.

Pick the two or three highest-priority epics, work with architects and the team to decompose them into well-formed stories with clear acceptance criteria and dependency maps, and surface any timing implications to management before they become surprises.

WEEK 3+

Ship and track.

Drive the first sprint with full ceremony discipline, instrument KPIs and ROI proxies for the delivered increment, and establish a visible progress artefact – a lightweight roadmap view – that keeps management and stakeholders informed without consuming team capacity.

I COVER LETTER

Dear PÿUR team,

Scrum Product Ownership at PÿUR sits at the intersection of business requirements, microservice architecture, and multi-team coordination. That specific combination is where I have spent most of the last four years: at Rohde & Schwarz on a distributed data platform with

Kubernetes, Argo Workflows, and multinational stakeholders; at the Bundesagentur für Arbeit managing an analytics platform with ETL, CI/CD, and a deputy IT security officer role; and at Emil Group rebuilding sprint discipline and backlog ownership for a B2B SaaS platform in a 17-person team that had lost delivery rhythm. In each case, the core challenge was the same: translate incomplete business requirements into structured, dev-ready stories inside a system that was moving in production.

The requirement for genuine microservice architecture knowledge is one I take seriously. At Rohde & Schwarz I owned features end-to-end through Kubernetes-based GitOps rollout using ArgoCD and Argo Workflows, reduced deployment times from multiple days to under an hour, and independently resolved infrastructure-level OpenShift blockers that had stalled the project. At the Bundesagentur I managed a migration to Kubernetes and standardised CI/CD with full test integration. I do not just understand the architecture layer as a Product Owner talking to engineers – I have navigated it hands-on, which changes the quality and precision of requirements I can produce.

On the multi-team coordination side, the Emil Group engagement is the most relevant example. I inherited a fragmented 17-person team, split it into smaller Scrum units with clear ownership, reintroduced velocity tracking and structured refinement, and rebuilt client trust through weekly product workshops. The company's roadmap commitments had been invisible to management; I made delivery progress visible through KPIs and structured communication – exactly the mechanic your job description calls out. Reducing senior developer attrition from near-total to a single departure was the outcome I am most proud of, because it reflected a restored working environment rather than a one-time delivery win.

My technical background – original degree in Wirtschaftsingenieurwesen at TU Berlin, years of hands-on Python and Kotlin work, and current AI-native tooling – means I can evaluate feasibility claims from engineering teams with genuine understanding, write acceptance criteria that hold up in review, and communicate timing implications to management with credibility on both sides of the conversation. Jira and Confluence are the tools I live in daily; backlog hygiene and epic structure are not process overhead for me but the primary product artefact.

I am based in Berlin, available within four weeks, and looking forward to a conversation about the specific software components this role owns and the current shape of the product team structure.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager and Product Owner with nearly ten years of experience translating complex operational workflows into scalable software systems across AI platforms, public data analytics, InsurTech SaaS, and regulated environments. Carries genuine development experience including GitOps rollouts, microservice debugging, and ETL pipeline design, which directly improves the quality of requirements produced and the speed of alignment with engineering teams. Comfortable managing multiple stakeholders with competing priorities, driving sprint discipline in teams that have lost it, and making roadmap progress visible to management through structured KPIs. Fluent in Scrum and Scaled Agile operating models. Native German, C2 English.

§ CORE STRENGTHS

- Requirements engineering in microservice and distributed environments
 - Epic and story structuring with architecture-level precision
 - Multi-stakeholder prioritisation and roadmap communication
 - Sprint discipline recovery and backlog management
 - Cross-functional alignment across engineering, QA, data, and compliance
 - KPI and ROI-oriented product thinking
 - Hands-on technical fluency: Kubernetes, GitOps, REST APIs, Python
 - AI-native tooling for spec, prototyping, and workflow automation
 - Founder-level pragmatism with low ego and high delivery ownership
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned end-to-end feature delivery across a Kubernetes-based microservice platform: user stories, acceptance criteria, implementation support, testing, and ArgoCD-based GitOps rollout
- Reduced deployment times from multiple days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level OpenShift issues independently; delivered in one week a feature the project lead had been requesting from engineers for over a year

- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA
- Delivered data transformation, provenance, and auditability features with multinational stakeholders under the FCAS defence programme

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new platform features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation; migrated legacy systems to Kubernetes
- Standardised CI/CD with full test integration at build time
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage
- Managed major system upgrades with full stakeholder communication across technical and non-technical audiences

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Split a bloated 17-person team into smaller, effective Scrum units; introduced ownership and deputy concepts that restored delivery stability
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Rebuilt client trust in a prototype-stage environment through structured communication and weekly product workshops
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation, including a Claims Center module from concept to production rollout
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on iOS and Android
- Integrated CGM interface into hospital information system workflows
- Managed stakeholder trust through transparent communication of legacy API and external database constraints

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned product architecture for backup, restore/checkpoint, and data-encryption modules on a quantum-secure one-time-pad encryption product
- Served as deputy IT security officer; defined attack vector mitigation and audit trail requirements
- Designed for sub-two-minute setup with no required technical knowledge, targeting non-technical enterprise buyers

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded group-based P2P payment product; owned PSP integration, full UX/UI design, and mobile app prototype
- Product later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of internal webshop to Shopware including complex catalogue and API integration and configurable approval policies
