

Philipp Hilbert. *Senior Product Manager for mobility-tech SaaS.*

Positioning, ten years of B2B SaaS product ownership, from regulated platforms to AI data systems, brought to bear on digitising everyday infrastructure.

§ WHY PETER PARK

Peter Park sits at an interesting intersection: a SaaS business whose physical layer is IoT hardware, whose customer base is B2B, and whose product problem is making parking invisible to the end user. That combination of software platform depth and real-world constraint mirrors environments I have worked in directly. The posting specifically calls out AI integration as a continuous responsibility, not a one-off initiative, which matches how I actually work. The ambition to replace friction-heavy legacy systems with seamless mobile payment flows is a product problem I find genuinely compelling. *That kind of infrastructure-meets-UX challenge is exactly where I am most effective.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, discovery synthesis and spec drafting
- **GPT**, stakeholder narrative and user story generation
- **GitHub Copilot**, in-sprint implementation support
- **Cursor / VSCode**, codebase-aware feature work
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy mock-ups and stakeholder reviews
- **Gamma.app**, roadmap and strategy presentations
- **n8n**, multi-step workflow and agent automation

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, Dagster, dbt, DuckDB, Django, AngularJS, Ionic, Redpanda, Bitbucket, Git, MicroStrategy, low-code platforms, CGM API integration.

§ HOW I WOULD WORK AT PETER PARK

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the backlog, join sprint ceremonies, and interview engineers and customer-facing colleagues to understand where the biggest gap sits between what the roadmap says and what customers actually need from the parking platform.

WEEK 2

Slice and validate.

Pick one underspecified initiative, run a structured refinement session with engineering and UX, and produce acceptance criteria sharp enough to start estimation – replacing ambiguity with a shippable slice.

WEEK 3+

Ship and close loops.

Take ownership of the backlog in full, introduce velocity tracking if absent, and begin the first data-informed priority review – tying roadmap items explicitly to customer retention and revenue impact.

I COVER LETTER

Dear Peter Park team,

Your product sits at a friction point most people notice only when it fails: paying to park. The promise – no barriers, no paper tickets, seamless mobile payment – is straightforward. The

engineering reality, where SaaS platform logic has to stay tightly coupled to IoT hardware deployed across hundreds of physical sites, is considerably more complex. That combination of platform depth, physical constraint, and high-volume consumer UX is one I have navigated in adjacent settings and find genuinely motivating.

At Emil Group I inherited a B2B SaaS platform that had lost sprint discipline under delivery pressure. I split a bloated seventeen-person team into smaller Scrum units, reintroduced velocity tracking, and rebuilt structured refinement from scratch. Within weeks the team was shipping reliably again. Client trust, which had eroded during a difficult prototype phase, came back through weekly product workshops where I translated technical complexity into honest timelines. That pattern – restoring clarity, then building forward – is one I would bring to Peter Park's product team from day one.

At Rohde and Schwarz I owned end-to-end delivery on a government-contract data platform: user stories through acceptance criteria, implementation support, GitOps rollout. I reduced deployment times from several days to under forty minutes by introducing ArgoCD. That level of delivery ownership, reaching into infrastructure when needed to unblock the team, is how I naturally operate. For a product that relies on IoT devices working reliably in the field, that fluency across software and hardware layers matters.

On AI integration specifically: I use tools such as Claude, GPT, GitHub Copilot, and n8n daily as a working part of my product process, not as experiments. I draft specs with LLM assistance, generate edge-case test scenarios, and prototype flows in Lovable or Framer before engineering cycles open. Peter Park's call for a PM who continuously identifies and integrates AI to improve process quality is a mandate I take literally rather than aspirationally.

I am Berlin-based, willing to relocate to Munich, speak German natively and English at C2, and can be available within four weeks of an offer. I would be glad to walk through any of the above in a conversation.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Senior Product Manager with ten years of experience across B2B SaaS, IoT-adjacent platforms, regulated environments, and AI data systems. Background combines rigorous requirements engineering, delivery ownership in cross-functional teams, and hands-on technical fluency across modern software stacks. Comfortable operating in ambiguity – where requirements are

incomplete, priorities shift fast, and teams need a PM who can restore clarity and keep shipping. AI-native in practice: LLM-assisted discovery, rapid prototyping, and agentic workflow design are embedded in daily work, not reserved for side projects.

§ CORE STRENGTHS

- B2B SaaS roadmap ownership with direct stakeholder accountability
 - Agile team restructuring and sprint discipline recovery
 - End-to-end delivery: user story through GitOps rollout
 - Data-driven backlog prioritisation and ROI framing
 - IoT and hardware-adjacent platform product fluency
 - Cross-functional alignment across engineering, QA, data science, and compliance
 - AI-native prototyping and LLM-assisted requirements engineering
 - User experience advocacy in consumer-facing mobile contexts
 - Founder-level pragmatism: high agency, low ego
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout via ArgoCD
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps pipelines
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature engineers had not shipped in over a year
- Led a cross-functional team of architect, data scientists, backend and frontend engineers, and QA across multinational stakeholders
- Improved data quality via filtering, tagging, and reproducible transformation pipelines with full audit trails

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new platform features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation, improving pipeline reliability and maintainability
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Standardised CI/CD with full test integration at build time
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins, Bitbucket, Git

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Re-established sprint discipline and delivery stability; split a bloated 17-person team into smaller, effective Scrum units with clear ownership and deputy roles
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation
- Designed and delivered a Claims Center module from concept to production rollout
- Reduced senior developer attrition from near-total to a single departure

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core mobile flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on iOS and Android
- Integrated CGM interface into hospital information system workflows
- Managed stakeholder trust through transparent communication of technical complexity involving legacy APIs and external databases

- Led a small team under tight deadlines with strict focus on highest-leverage features

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned backup, restore, checkpoint, and data-encryption product architecture for a quantum-secure encryption product built on one-time-pad keys and true random number generator hardware
- USP: setup under two minutes, no technical knowledge required
- Also served as deputy IT security officer

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payment product on a P2P backbone
- Responsible for PSP integration, full UX/UI design, and mobile app prototype
- Later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware including complex catalogue and API integration and customisable approval policies
-
