Dear Peter Park team,

Your product sits at a friction point most people notice only when it fails: paying to park. The promise – no barriers, no paper tickets, seamless mobile payment – is straightforward. The engineering reality, where SaaS platform logic has to stay tightly coupled to IoT hardware deployed across hundreds of physical sites, is considerably more complex. That combination of platform depth, physical constraint, and high-volume consumer UX is one I have navigated in adjacent settings and find genuinely motivating.

At Emil Group I inherited a B2B SaaS platform that had lost sprint discipline under delivery pressure. I split a bloated seventeen-person team into smaller Scrum units, reintroduced velocity tracking, and rebuilt structured refinement from scratch. Within weeks the team was shipping reliably again. Client trust, which had eroded during a difficult prototype phase, came back through weekly product workshops where I translated technical complexity into honest timelines. That pattern – restoring clarity, then building forward – is one I would bring to Peter Park's product team from day one.

At Rohde and Schwarz I owned end-to-end delivery on a government-contract data platform: user stories through acceptance criteria, implementation support, GitOps rollout. I reduced deployment times from several days to under forty minutes by introducing ArgoCD. That level of delivery ownership, reaching into infrastructure when needed to unblock the team, is how I naturally operate. For a product that relies on IoT devices working reliably in the field, that fluency across software and hardware layers matters.

On AI integration specifically: I use tools such as Claude, GPT, GitHub Copilot, and n8n daily as a working part of my product process, not as experiments. I draft specs with LLM assistance, generate edge-case test scenarios, and prototype flows in Lovable or Framer before engineering cycles open. Peter Park's call for a PM who continuously identifies and integrates AI to improve process quality is a mandate I take literally rather than aspirationally.

I am Berlin-based, willing to relocate to Munich, speak German natively and English at C2, and can be available within four weeks of an offer. I would be glad to walk through any of the above in a conversation.

Best regards, *Philipp Hilbert*
