

Philipp Hilbert. *Senior Product Owner for mobile digital products at scale.*

Positioning, nearly ten years translating complex operational workflows into shipped digital products, now applying that to ADAC's mobile ecosystem.

§ WHY ADAC

ADAC operates one of Germany's most complex multi-service ecosystems – spanning mobility, insurance, travel, and health – and is now investing seriously in digital self-service and mobile-first experiences. The posting names wallet solutions, mobile websites, and cross-divisional alignment across Pannenhilfe, Loyalty, and Versicherungen as live concerns, which is exactly the kind of multi-stakeholder, multi-surface challenge where structured backlog ownership and delivery discipline pay off most. What makes this role genuinely interesting is the sheer breadth of user journeys ADAC can unlock digitally – from roadside assistance to travel booking to membership services – all converging in a single mobile product layer. *That is the kind of compound product surface where clear ownership and iteration discipline create real leverage.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, edge-case generation, stakeholder communication
- **GPT**, research synthesis, backlog refinement support
- **GitHub Copilot**, in-repo implementation support
- **Cursor / VSCode**, AI-assisted development and spec validation
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy interaction flows

- **Gamma.app**, structured presentation and workshop materials
 - **n8n**, workflow and notification automation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, Ionic, PostgreSQL, MongoDB, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, Bitbucket, dbt, Dagster, DuckDB, MicroStrategy, REST APIs, Redpanda, Git, GitOps pipelines, Low-code insurance platform, Shopware, CGM API integration.

§ HOW I WOULD WORK AT ADAC

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Walk the existing mobile product landscape – ADAC app, mobile web, wallet touchpoints – interview key stakeholders across Pannenhilfe, Mobility, and Mitgliederservice, and map where the backlog reflects real user journeys versus where it reflects internal org structure.

WEEK 2

Slice and prioritise.

Run a structured backlog review with the agile team: identify which Epics have clear acceptance criteria, which are stalled on cross-divisional dependencies, and propose a prioritisation framework aligned with measurable self-service KPIs.

WEEK 3+

Ship and iterate.

Establish a cadence of weekly stakeholder updates, sprint reviews with concrete demo artefacts, and hypothesis-driven feature experiments – closing the loop between user feedback, analytics, and the next iteration.

I COVER LETTER

Dear ADAC Recruiting Team,

I am applying for the Senior Product Owner Mobile role because the challenge it describes – owning mobile digital products across a large, multi-divisional organisation with real operational complexity – is precisely where I have done my best work.

At Emil Group, I inherited a 17-person delivery team that had lost sprint discipline and was haemorrhaging client trust. Within weeks I restructured the team into smaller Scrum units, reintroduced velocity tracking and ownership models, and rebuilt stakeholder confidence through structured weekly product workshops. The analogy to ADAC is direct: large ecosystems with many internal stakeholders require Product Owners who are as comfortable in a refinement session as they are in a boardroom, and who can translate business intent from Versicherungen or Loyalty into dev-ready user stories without losing fidelity in either direction.

At Rohde & Schwarz, working on a government defence programme, I owned a complex backlog across data scientists, backend engineers, QA, and a multinational architect team. I delivered autonomous feature sets end-to-end – from user story to acceptance criteria to GitOps rollout – and reduced deployment cycle times from several days to under 40 minutes by introducing ArgoCD-based pipelines. Technical fluency is not a nice-to-have for me; it is how I unblock delivery when no one else can.

At CLINET Platforms, I built a mobile-first app for hospitals covering digital anamnesis, therapy plans, patient document storage, and transport coordination – running iOS and Android in parallel with a small team and strict delivery timelines. The ADAC mobile product surface – self-service, mobility, travel – has a different domain but the same structural challenge: multiple backend systems, multiple user types, and user journeys that must feel seamless despite considerable technical complexity underneath.

On the AI dimension: I use AI tools daily as a product operator, not as a novelty. Claude and GPT accelerate my requirements work, edge-case identification, and stakeholder documentation. Lovable and Framer let me validate interaction concepts before engineering cycles begin. I am genuinely interested in how AI features can improve the ADAC member experience – from proactive breakdown assistance to personalised travel recommendations – and I know how to define those features in ways that are implementable rather than aspirational.

I am a German native speaker and operate at C2 in English, as demonstrated in the Qcrypt AG product launch presentation linked in my profile. I am open to relocating to Munich and available within four weeks of an offer.

Best regards, *Philipp Hilbert*

§ BEARING

Senior Product Owner with nearly ten years of experience owning complex digital products across regulated industries, multi-stakeholder enterprises, and mobile-first platforms. Background spans InsurTech SaaS, public-sector analytics, government AI programmes, healthcare mobile apps, and founder-level product building. Brings end-to-end delivery ownership – from backlog architecture and sprint facilitation to GitOps rollout and stakeholder alignment – with genuine technical fluency that unblocks teams rather than creating bottlenecks. AI-native in daily practice: uses LLM-assisted workflows, rapid prototyping tools, and hypothesis-driven experimentation as standard operating mode.

§ CORE STRENGTHS

- Cross-divisional stakeholder management in large organisations
 - Agile backlog ownership: Epics, Features, User Stories at scale
 - Mobile product delivery across iOS, Android, and mobile web
 - Hypothesis-driven product discovery and experiment design
 - Sprint discipline, team restructuring, and delivery recovery
 - Technical fluency enabling independent unblocking of engineering issues
 - AI-native execution: daily use of LLM tools in product workflows
 - Requirements engineering for complex operational workflows
 - German-native, English C2: seamless switching in mixed teams
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end – user stories, acceptance criteria, implementation, testing, GitOps rollout – on a government programme with multinational stakeholders
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA through complex delivery cycles
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD

- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature that had been blocked for over a year
- Improved data quality via reproducible transformation pipelines and audit trails with full provenance

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor platform serving regional labour market and demographic data at national scale
- Delivered features including labour shortage analytics, flexible regional comparison tools, and modernised admin tooling
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration at build time
- Migrated legacy systems to Kubernetes and managed major system upgrades across a live analytics platform

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned product delivery for a B2B InsurTech platform reducing insurance product time-to-market from over one year to under one week, serving primary insurers, reinsurers, MGAs, and brokers
- Designed and delivered a Claims Center module from concept to production rollout
- Restructured a bloated 17-person team into smaller, effective Scrum units and reintroduced velocity tracking, sprint ownership, and structured refinement practices
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Built a mobile-first pilot app for hospitals across iOS and Android, covering digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Integrated CGM interface into hospital information system workflows, managing legacy API complexity and external database dependencies
- Led a small team under tight deadlines with strict focus on highest-leverage features

- Built stakeholder trust through transparent communication of technical constraints and realistic delivery framing

EARLIER EXPERIENCE (SELECTED) 2013, 2021

Founder, Product Owner, Project Lead roles

- Product Owner, Bundesdruckerei COVID-19 Data Platform (2021): RKI projects DIM and DESH; secure data structures and identity management
- Proxy Product Owner, AOK Health Insurance ITSCare (2019–2020): migrated internal webshop to Shopware including complex catalogue and API integration and customisable approval workflows
- Product Owner, Qcrypt AG (2016–2018): quantum-secure encryption product based on one-time-pad keys and true-RNG hardware; deputy IT security officer; promoted product in English at international level
- Founder, Kvitt Payment Solutions (2013–2018): group-based P2P payments, PSP integration, full UX/UI design, mobile app prototype; later acquired and operated by Sparkasse
