

Philipp Hilbert. *Senior Product Owner for mobile digital products at scale.*

Positioning, nearly ten years translating complex operational workflows into shipped digital products, now applying that to ADAC's mobile ecosystem.

Dear ADAC Recruiting Team,

I am applying for the Senior Product Owner Mobile role because the challenge it describes – owning mobile digital products across a large, multi-divisional organisation with real operational complexity – is precisely where I have done my best work.

At Emil Group, I inherited a 17-person delivery team that had lost sprint discipline and was haemorrhaging client trust. Within weeks I restructured the team into smaller Scrum units, reintroduced velocity tracking and ownership models, and rebuilt stakeholder confidence through structured weekly product workshops. The analogy to ADAC is direct: large ecosystems with many internal stakeholders require Product Owners who are as comfortable in a refinement session as they are in a boardroom, and who can translate business intent from Versicherungen or Loyalty into dev-ready user stories without losing fidelity in either direction.

At Rohde & Schwarz, working on a government defence programme, I owned a complex backlog across data scientists, backend engineers, QA, and a multinational architect team. I delivered autonomous feature sets end-to-end – from user story to acceptance criteria to GitOps rollout – and reduced deployment cycle times from several days to under 40 minutes by introducing ArgoCD-based pipelines. Technical fluency is not a nice-to-have for me; it is how I unblock delivery when no one else can.

At CLINET Platforms, I built a mobile-first app for hospitals covering digital anamnesis, therapy plans, patient document storage, and transport coordination – running iOS and Android in parallel with a small team and strict delivery timelines. The ADAC mobile product surface – self-service, mobility, travel – has a different domain but the same structural challenge: multiple backend systems, multiple user types, and user journeys that must feel seamless despite considerable technical complexity underneath.

On the AI dimension: I use AI tools daily as a product operator, not as a novelty. Claude and GPT accelerate my requirements work, edge-case identification, and stakeholder documentation. Lovable and Framer let me validate interaction concepts before engineering cycles begin. I am genuinely interested in how AI features can improve the ADAC member experience – from proactive breakdown assistance to personalised travel recommendations – and I know how to define those features in ways that are implementable rather than aspirational.

I am a German native speaker and operate at C2 in English, as demonstrated in the Qcrypt AG product launch presentation linked in my profile. I am open to relocating to Munich and available within four weeks of an offer.

Best regards, *Philipp Hilbert*
