

Philipp Hilbert. *Product Manager with a decade of cross-functional delivery.*

Positioning, ten years translating complex operational requirements into shipped software, now focused on a B2B platform where sustainability and product rigor intersect.

§ WHY CHG-MERIDIAN

CHG-MERIDIAN's tesma platform sits at the intersection of sustainability reporting, asset lifecycle management, and international B2B SaaS – a combination that rewards exactly the kind of structured requirements engineering and cross-functional sprint discipline I have built my career around. The posting explicitly calls out backlog and sprint management as a central responsibility, which is where I have repeatedly unblocked stalled delivery: at Emil Group I split a bloated 17-person team into focused Scrum units and restored velocity that had been lost under delivery pressure. The role of central interface between business requirements and technical implementation is one I have held on government, InsurTech, and healthcare platforms – each with its own compliance layer and its own impatient stakeholders. *That is precisely the environment where my strengths compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting and edge-case generation
- **GPT**, market and competitor research synthesis
- **GitHub Copilot**, in-repo scaffolding and acceptance criteria
- **Cursor / VSCode**, spec-to-prototype iteration

- **Lovable**, rapid front-end prototyping
 - **Framer**, design-heavy wireframe work
 - **Gamma.app**, stakeholder presentation decks
 - **n8n**, workflow automation and agent orchestration
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Django, JavaScript, PostgreSQL, MongoDB, Kotlin (Spring Boot), REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Bitbucket, Git, dbt, Dagster, DuckDB, MicroStrategy, Redpanda, Ionic, AngularJS, Shopware, low-code insurance platforms, CGM API integration, Azure DevOps (backlog and sprint tooling), Figma-compatible prototyping workflows.

§ SIDE PROJECT

CRYPTO BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

A personal infrastructure layer for algorithmic crypto strategy development and live execution research.

- Builds and runs backtests across CEX and DEX venues, including perpetual futures and spot DEX mechanics.
 - Architecture uses a file-queue-based agent loop with Python at the core and structured data pipelines feeding strategy evaluation.
 - Integrates analytics from Coinglass and Hyblock Capital for liquidation heatmap and market microstructure signals.
 - Demonstrates the systematic, data-driven product thinking directly transferable to KPI-oriented product controlling and structured knowledge-base maintenance at tesma.
-

§ HOW I WOULD WORK AT CHG-MERIDIAN

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the product consulting team and existing sprint ceremonies, read every open backlog item, and map where requirements between business and engineering are ambiguous or contested.

WEEK 2

Triage and sharpen.

Run a structured backlog refinement session to surface acceptance criteria gaps, flag items missing business-viability framing, and align on the next sprint's definition of done.

WEEK 3+

Ship, report, close loops.

Take ownership of the first sprint review, produce the first product KPI report against defined metrics, and initiate the knowledge-base structure for tesma and sustainability product documentation.

I COVER LETTER

Dear CHG-MERIDIAN Team,

The tesma Product Manager role caught my attention because it combines two things I find genuinely interesting: structured platform product management in a B2B environment and a sustainability angle that is increasingly shaping enterprise procurement decisions. I have spent nearly ten years as a Product Manager and Product Owner in regulated, compliance-sensitive environments – InsurTech, public sector analytics, European defence – and in every one of those engagements the core challenge was the same: translate ambiguous operational requirements into sprint-ready engineering work without losing the business logic in translation. That is the exact mandate in your posting.

At Emil Group I inherited an InsurTech platform where a 17-person Scrum team had lost its sprint rhythm under delivery pressure and client trust was eroding. I restructured the team into smaller, accountable units, reintroduced velocity tracking and structured refinement, and rebuilt the client relationship through weekly product workshops. Within weeks we were shipping again and senior developer attrition dropped from near-total to a single departure. The combination your posting asks for – backlog and sprint management as the central interface between business requirements and technical implementation – is something I have done under pressure, not just in theory.

At Rohde & Schwarz, working on a government AI platform under the FCAS programme, I was responsible for data transformation, audit trails, and a cross-functional team spanning architects, data scientists, backend and frontend engineers, and QA. I delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout. I also independently resolved an infrastructure-level OpenShift issue that the project lead had been requesting from the engineering team for over a year – I delivered it in one week. That hands-on problem-solving disposition, the willingness to go deep rather than escalate, is what I bring to a role like this one.

For the sustainability and product controlling dimensions of tesma, my background at the Federal Employment Agency is relevant. There I served as Deputy IT Security Officer while simultaneously owning the product roadmap for a public analytics platform, managing stakeholder reporting, compliance, and data lineage alongside feature delivery. I understand what product reporting against defined KPIs actually requires at the process level, not just the dashboard level.

I write and speak German natively and English at C2. I am open to relocating to the Munich area. I look forward to discussing how my background fits the team's needs.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager and Product Owner with nearly ten years of experience turning complex operational workflows into sprint-ready requirements and shipped software. Proven delivery track record across InsurTech SaaS, public sector analytics, AI data platforms, and regulated healthcare – each requiring structured requirements engineering, backlog ownership, and cross-functional alignment between business and engineering. Experienced in introducing sprint discipline into stalled teams, rebuilding client trust in prototype-stage environments, and maintaining product controlling against defined KPIs. Equally comfortable writing Lastenheft-level specifications and facilitating refinement sessions with engineers.

§ CORE STRENGTHS

- Requirements engineering: Lastenheft, Pflichtenheft, acceptance criteria
- Backlog management and sprint discipline in cross-functional teams

- Cross-functional alignment: business, engineering, QA, compliance
 - Product controlling and KPI-based reporting
 - Market and competitive analysis translated into product measures
 - Go-to-market coordination with sales and consulting teams
 - Knowledge-base structuring and product documentation
 - AI-native tooling for rapid prototyping and spec generation
 - Founder-level pragmatism, low overhead, high delivery
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Led cross-functional delivery team (architect, data scientists, backend, frontend, QA) for a central AI data management platform under the FCAS European defence programme
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation, testing, and GitOps-based rollout
- Responsible for data transformation, audit trails, and full data provenance across multinational stakeholders
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Resolved an infrastructure-level OpenShift blocker independently, delivering in one week a feature that had been pending from engineers for over a year

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Owned roadmap and delivery for the Arbeitsmarktmonitor, a public analytics platform for regional labour market and demographic data
- Delivered features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration at build time
- Managed major system upgrades and Kubernetes migration of legacy components

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Managed B2B InsurTech platform reducing insurance product time-to-market from over one year to under one week
- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline: split a 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement
- Rebuilt client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered a mobile-first hospital app (iOS and Android) covering digital anamnesis, meal and therapy plans, transport, chat, and document storage
- Integrated CGM interface into hospital information system workflows
- Managed stakeholder trust through transparent communication of technical complexity involving legacy APIs and external databases

§ FOUNDER & EARLY-STAGE EXPERIENCE

- **Qcrypt AG (2016–2018), Product Owner:** Quantum-secure encryption product based on one-time-pad keys and true random number generator hardware. Setup under two minutes, no technical knowledge required. Also served as deputy IT security officer.
- **Kvitt Payment Solutions (2013–2018), Founder & CFO:** Group-based P2P payments. PSP integration, full UX/UI design, mobile app prototype. Later acquired and operated by Sparkasse.
- **AOK Health Insurance / ITSCare (2019–2020), Proxy Product Owner:** Migration of internal webshop to Shopware, including complex catalogue and API integration and configurable approval policies.
- **Bundesdruckerei / RKI (2021), Product Owner:** COVID-19 data platform (projects DIM and DESH). Secure data structures and identity management.
- **Smart Soil Technologies (2016–2021), Co-Founder / CFO / CDO:** Nanotechnology-based vertical farming substrate solutions. Digital tooling, financial planning, investor relations, HR build-out.
- **Enercon (2019), Project Lead:** Full IT modernisation of a specialist manufacturing site covering software, databases, hardware infrastructure, communications, Office 365, and SSO.
