Dear CHG-MERIDIAN Team,

The tesma Product Manager role caught my attention because it combines two things I find genuinely interesting: structured platform product management in a B2B environment and a sustainability angle that is increasingly shaping enterprise procurement decisions. I have spent nearly ten years as a Product Manager and Product Owner in regulated, compliance-sensitive environments – InsurTech, public sector analytics, European defence – and in every one of those engagements the core challenge was the same: translate ambiguous operational requirements into sprint-ready engineering work without losing the business logic in translation. That is the exact mandate in your posting.

At Emil Group I inherited an InsurTech platform where a 17-person Scrum team had lost its sprint rhythm under delivery pressure and client trust was eroding. I restructured the team into smaller, accountable units, reintroduced velocity tracking and structured refinement, and rebuilt the client relationship through weekly product workshops. Within weeks we were shipping again and senior developer attrition dropped from near-total to a single departure. The combination your posting asks for – backlog and sprint management as the central interface between business requirements and technical implementation – is something I have done under pressure, not just in theory.

At Rohde & Schwarz, working on a government AI platform under the FCAS programme, I was responsible for data transformation, audit trails, and a cross-functional team spanning architects, data scientists, backend and frontend engineers, and QA. I delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout. I also independently resolved an infrastructure-level OpenShift issue that the project lead had been requesting from the engineering team for over a year – I delivered it in one week.

That hands-on problem-solving disposition, the willingness to go deep rather than escalate, is what I bring to a role like this one.

For the sustainability and product controlling dimensions of tesma, my background at the Federal Employment Agency is relevant. There I served as Deputy IT Security Officer while simultaneously owning the product roadmap for a public analytics platform, managing stakeholder reporting, compliance, and data lineage alongside feature delivery. I understand what product reporting against defined KPIs actually requires at the process level, not just the dashboard level.

I write and speak German natively and English at C2. I am open to relocating to the Munich area. I look forward to discussing how my background fits the team's needs.

Best regards, *Philipp Hilbert*
