

Philipp Hilbert. *Product Owner for finance-facing digital infrastructure.*

Positioning, nearly ten years translating operational complexity into dev-ready stories, now stepping into DACHSER's invoicing digitisation.

§ WHY DACHSER

DACHSER is digitising core financial operations – invoicing, purchasing, billing logic – through a custom platform called CUBI, inside a family-owned logistics company with a genuinely long time horizon. That combination of operational depth and deliberate product investment is rare, and the Product Owner role sits exactly where operational domain knowledge and structured requirements engineering meet. The posting signals that this team is building something meaningful from a clean slate rather than wrapping legacy workarounds. *That is exactly the kind of problem where careful backlog ownership compounds over time.*

§ HONEST FRAMING

My direct experience in accounts-payable or invoicing software is limited; my background is in public-sector analytics, InsurTech policy administration, and data platform work rather than dedicated billing systems. The transferable mechanic is strong: I have repeatedly translated complex, rule-heavy business processes – insurance product configuration, labour market indicator pipelines, clinical workflow integration – into structured, testable implementation stories inside Scrum teams.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting and edge-case generation
- **GPT**, stakeholder communication drafts and story refinement
- **GitHub Copilot**, in-repo assistance during implementation support cycles
- **Cursor / VSCode**, specification and lightweight scripting
- **Gamma.app**, structured workshop and stakeholder decks
- **Lovable**, rapid UI prototyping for early discovery
- **n8n**, workflow automation and agentic loop design
- **Framer**, design-heavy concept exploration

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin with Spring Boot, Python, Django, JavaScript, PostgreSQL, MongoDB, REST APIs, dbt, Dagster, DuckDB, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Bitbucket, Git, MicroStrategy, Redpanda, CGM API integration, Ionic, AngularJS, low-code insurance platform tooling, Shopware.

§ SIDE PROJECT

BACKTESTING ENGINE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Self-built crypto market backtesting infrastructure and agent framework.

- Implements a file-queue-based agent orchestration loop for strategy execution and evaluation.
- Built on Python with modular pipeline architecture to separate data ingestion, signal generation, and position management.
- Connected to live venue data from Hyperliquid and aggregated sources for realistic slippage and execution modelling.
- Demonstrates the same structured thinking applied to CUBI: decompose a complex rule-bound domain into testable, independently shippable components.

§ HOW I WOULD WORK AT DACHSER

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the CUBI team's existing Scrum ceremonies, read the current backlog and acceptance criteria, interview stakeholders in finance and procurement to map where requirement ambiguity is costing sprint velocity.

WEEK 2

Sharpen the backlog.

Refine the top-priority stories to INVEST standard, surface missing acceptance criteria, and align with the engineering team on definition of done for the invoicing and purchasing flows.

WEEK 3+

Ship and close loops.

Own the sprint review cycle, release stories that meet DoD, and establish a lightweight stakeholder update cadence so finance and procurement stay informed without derailing the development team.

I COVER LETTER

Dear Anna Bernardi and the DACHSER Digital Product Group Finance team,

DACHSER is building CUBI – a purpose-built invoicing and purchasing system – inside one of Europe's largest privately held logistics companies. That is a meaningful product problem: financial operations at DACHSER's scale involve complex billing logic, multi-party approval flows, and strict auditability requirements, and the Product Owner role is the person who keeps all of that tractable for an engineering team. I want to do that work.

My clearest parallel is the Emil Group engagement, where I joined a B2B InsurTech platform mid-delivery. The product domain was similarly rule-heavy: insurance product configuration, underwriting logic, claims handling, policy issuance, and document management – each with its own approval logic and regulatory constraints. I rebuilt sprint discipline by splitting a 17-person team into coherent Scrum units, reintroduced velocity tracking, and delivered the Claims Center module from concept to production rollout. The deeper challenge there was not the software; it was restoring enough stakeholder trust that the business would engage honestly with

prioritisation decisions. I did that through structured weekly product workshops and transparent communication of technical complexity – the same muscles the CUBI role will require.

At Rohde & Schwarz, I operated as the effective Product Manager inside a defence programme where requirements arrived incomplete and infrastructure blockers were the norm. I delivered autonomous feature sets end-to-end: writing user stories, supporting implementation, running testing, and managing GitOps rollout. I also unblocked a platform-level OpenShift issue independently that engineers had deprioritised for over a year, delivering it in a week. That degree of technical engagement is how I protect sprint commitments rather than escalating blockers upward.

At the Bundesagentur für Arbeit, I was responsible for data transformation, lineage, and auditability on a public analytics platform – the same categories of concern that a billing system raises around transaction traceability and financial audit trails. I introduced Dagster for automated ETL, standardised CI/CD, and served as Deputy IT Security Officer with focus on data governance. Structured, rule-bound data with compliance implications is familiar territory.

My academic background in Wirtschaftsingenieurwesen at TU Berlin, with a logistics specialisation, means I understand the operational context DACHSER works in – not just as a service provider but as a network with its own cost structure and allocation logic. That context matters when translating stakeholder requests from the finance department into stories that the development team can actually build.

I am based in Berlin and open to relocating to Munich. I look forward to the conversation.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Owner and Product Manager with nearly ten years of experience translating complex, rule-bound operational workflows into structured, dev-ready requirements inside Scrum teams. Background spans InsurTech policy and claims platforms, public-sector data products, and defence-grade AI data management – consistently in environments where stakeholder interests are divergent, requirements are incomplete, and delivery pressure is real. Technically fluent across backend, data, and infrastructure tooling, with the ability to unblock implementation issues independently rather than relying solely on escalation. Low ego, high agency, comfortable in hybrid and distributed team settings.

§ CORE STRENGTHS

- Translating operational domain logic into INVEST-standard user stories
- Scrum ownership: backlog prioritisation, sprint discipline, velocity recovery
- Stakeholder alignment across finance, engineering, QA, and compliance
- Requirements engineering in rule-heavy, auditability-sensitive domains
- Cross-functional delivery ownership end-to-end
- Technical fluency sufficient to unblock infrastructure and implementation issues
- Workshop facilitation and structured stakeholder communication
- Data lineage, audit trails, and governance-aware product design
- Founding-level pragmatism: decisions with incomplete information, low overhead

§ PROFESSIONAL EXPERIENCE

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Delivered Claims Center module from concept to production rollout inside a B2B insurance platform serving primary insurers, reinsurers, MGAs, and brokers.
- Re-established sprint discipline after sustained delivery pressure; split a bloated 17-person team into smaller, effective Scrum units and introduced ownership and deputy roles.
- Reintroduced velocity tracking and structured refinement practices; restored stakeholder trust through weekly product workshops and transparent communication of technical constraints.
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation.
- Reduced senior developer attrition from near-total to a single departure through stable, predictable sprint management.

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end – user stories, acceptance criteria, implementation support, testing, and GitOps rollout – inside a defence-programme AI data platform (FCAS).
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD.

- Unblocked a platform-level OpenShift issue independently that engineers had deprioritised for over a year; delivered the feature in one week.
- Responsible for data transformation, auditability, and full data provenance with multinational stakeholders across architecture, data science, backend, frontend, and QA.

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features on the Arbeitsmarktmontor analytics platform: labour shortage analytics, regional comparison tooling, and modernised admin interfaces.
- Introduced Dagster for automated ETL and indicator generation; migrated legacy systems to Kubernetes.
- Served as Deputy IT Security Officer with responsibility for compliance, governance, and data lineage.
- Standardised CI/CD with full test integration at build time.

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on iOS and Android.
- Integrated CGM interface into hospital information system workflows under tight deadlines.
- Built stakeholder trust through transparent communication of legacy API and external database constraints.

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware.
- Responsible for backup, restore, checkpoint, and encryption product design with a target of under two minutes setup time for non-technical users.

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built group-based P2P payment product from concept through mobile app prototype, PSP integration, and full UX/UI design.

- Later acquired and operated by Sparkasse.

AOK HEALTH INSURANCE – ITSCARE (VIA PROJUNCTA) 2019, 2020

Proxy Product Owner

- Led migration of internal webshop to Shopware, including complex product catalogue and API integration and customisable approval policies.

BUNDESDRUCKEREI 2021

Product Owner, COVID-19 Data Platform

- Delivered secure data structures and identity management for RKI projects DIM and DESH.
