

Philipp Hilbert. *Product Owner for digital platforms that move real-world markets.*

Positioning, nearly ten years turning complex operational workflows into scalable digital products, now applied to sustainable mobility at Bikeleasing.

§ WHY BIKELEASING

Bikeleasing operates at the intersection of B2B SaaS, employer benefits, and regulated mobility – a combination where product decisions have direct downstream effects on tens of thousands of employers and millions of employees. The explicit call in the posting for a Product Owner who uses AI tools actively inside the product lifecycle, not just as a curiosity, signals a team that has moved past hype and into execution. The platform's scale – over 80,000 corporate clients already – means that a well-written user story or a sharper acceptance criterion has measurable impact on real commuters. *That is exactly the environment where structured, AI-assisted product thinking compounds.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, user story drafting, acceptance criteria, release notes, edge-case generation
- **GPT**, backlog analysis, stakeholder communication drafts, requirement synthesis
- **GitHub Copilot**, in-repo implementation support and code review
- **Cursor / VSCode**, spec-driven development and rapid feature exploration
- **Lovable**, front-end prototyping before dev commitment
- **Framer**, design-heavy wireframing and interactive mockups
- **Gamma.app**, structured product presentations and documentation

- **n8n**, workflow automation and agentic process design

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Production work has touched Kotlin with Spring Boot, Python, Django, JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Bitbucket, Dagster, dbt, DuckDB, MicroStrategy, Redpanda, AngularJS, Ionic, and low-code platform environments. API integration patterns, CI/CD pipeline standardisation, and GitOps rollout are part of the practical delivery record, not background reading.

§ HOW I WOULD WORK AT BIKELEASING

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Talk to engineers, support, and at least two active employer clients to understand where the platform creates friction today, and map that against the current backlog to find where the highest-leverage user stories are missing or underspecified.

WEEK 2

Sharpen and slice.

Take the two or three most impactful backlog items, rewrite them with precise acceptance criteria and testable edge cases – using Claude for the first draft, then reviewed with the team – and run a refinement session to surface hidden assumptions before sprint commitment.

WEEK 3+

Ship and close loops.

Accompany the first release end-to-end: support QA, write the release notes, gather immediate user feedback, and feed learnings back into the next sprint cycle to establish a continuous improvement rhythm the team can rely on.

I COVER LETTER

Dear Bikeleasing team,

Your platform sits at a point most B2B SaaS companies only aspire to: genuine scale, a clear social mission, and a product that still has significant room to grow in terms of user experience and technical sophistication. The job description mentions explicitly that you expect a Product Owner who uses AI tools not as a marketing point but as a practical accelerant across the entire product lifecycle – from requirement analysis to backlog refinement to release planning. That specificity caught my attention, because it matches how I have actually worked for the past several years.

At Rohde & Schwarz, where I owned the AI data management platform for the FCAS defence programme, I delivered features end-to-end – user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout – in a high-stakes, multinational environment where requirements were often incomplete and stakeholders spoke different technical languages. I used LLM-assisted workflows daily to accelerate specification quality and edge-case coverage. The result was measurable: deployment times dropped from several days to 20–40 minutes after I introduced GitOps with ArgoCD, and I unblocked infrastructure-level issues that engineers had deprioritised for over a year, delivering a critical feature in one week as sole developer.

At Emil Group, I inherited an InsurTech platform where a 17-person team had lost sprint discipline under delivery pressure. I split the team into focused Scrum units, reintroduced velocity tracking, and rebuilt client trust through structured weekly workshops. Churn of senior developers dropped from near-total to a single departure. The mechanics there – restoring predictability, sharpening requirement quality, moderating between business and engineering – are directly applicable to a fast-growing platform like yours, where scale is increasing the cost of imprecision.

My technical background – Python, REST APIs, Kubernetes, CI/CD, database fundamentals – means I can assess feasibility independently without becoming a bottleneck for engineering. I understand when a proposed feature is architecturally straightforward and when it carries hidden complexity. That fluency is what allows me to write user stories that engineers actually trust, rather than stories that need a separate translation step in every refinement session.

Bikeleasing is building infrastructure for a mobility shift that is still in its early innings in Germany. I would like to contribute to making that platform faster, cleaner, and more useful for the employers and employees who rely on it. I am available within four weeks of an offer and open to discussing the role in detail.

Best regards, *Philipp Hilbert*

§ BEARING

Product Manager and Product Owner with nearly ten years of experience building and shipping B2B digital platforms in regulated, high-complexity environments. Operated across InsurTech, public sector analytics, defence AI systems, and healthcare – always translating messy operational reality into precise, dev-ready requirements. AI-native in daily execution: LLM-assisted user story drafting, acceptance criteria, backlog analysis, and release documentation are part of the standard workflow. Technical fluency across APIs, cloud infrastructure, and data systems enables independent feasibility assessment without engineering bottlenecks. Comfortable restoring delivery discipline in stressed teams and rebuilding client trust in prototype-stage environments.

§ CORE STRENGTHS

- AI-assisted user story and acceptance criteria authoring
 - Translating operational workflows into dev-ready requirements
 - Backlog management, sprint discipline, and velocity recovery
 - Cross-functional alignment across engineering, business, and QA
 - Technical feasibility assessment without engineering dependency
 - Client trust rebuilding in prototype-stage and high-pressure environments
 - Workshop facilitation bridging technical and business perspectives
 - KPI-oriented prioritisation and iterative release planning
 - Founder-level pragmatism: low ego, high agency, bias for action
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout
- Used LLM-assisted workflows daily to accelerate specification quality and edge-case coverage across a multinational stakeholder environment
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD

- Unblocked infrastructure-level issues in OpenShift independently; delivered a feature the project lead had been requesting for over a year – completed in one week
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA
- Built a central AI and data management platform for multimodal datasets with full data provenance, audit trails, and SafeAI evaluation concepts

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Public Data Analytics

- Delivered labour shortage analytics, flexible regional comparison tooling, and modernised admin interfaces on the Arbeitsmarktmonitor platform
- Introduced Dagster for automated ETL and indicator generation, reducing manual pipeline maintenance
- Standardised CI/CD with full test integration at build time; migrated legacy systems to Kubernetes
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Designed interactive dashboards and community features serving regional planning stakeholders

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Designed and delivered a Claims Center module from concept to production rollout on a B2B platform reducing insurance time-to-market from over one year to under one week
- Re-established sprint discipline and delivery stability; split a bloated 17-person team into focused Scrum units and introduced ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices lost under delivery pressure
- Rebuilt client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage across iOS and Android
- Integrated CGM interface into hospital information system workflows, navigating legacy API constraints

- Maintained stakeholder trust through transparent communication of technical complexity under tight deadlines

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner & Deputy IT Security Officer

- Owned product architecture for backup, restore/checkpoint, and data-encryption modules on a quantum-secure one-time-pad encryption product
- Designed onboarding to be operable in under two minutes with no technical knowledge required
- Served as deputy IT security officer; responsible for attack vector assessment and compliance posture

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded a group-based P2P payment product; owned full UX/UI design, PSP integration, and mobile app prototype
- Later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware, including complex catalogue and API integration and customisable approval policy workflows
