

Philipp Hilbert. *Product Owner for digital banking infrastructure.*

Positioning, nearly ten years owning complex software products end-to-end – from requirements to release – now applying that discipline to banking-grade platforms.

§ WHY FINANZ INFORMATIK

Finanz Informatik operates at a scale and with a mandate that most IT organisations only aspire to: hundreds of savings banks depending on a shared platform, where configuration management and release quality are not nice-to-haves but load-bearing pillars. The posting is explicit about the breadth of the Product Owner role – requirements, specification, test, documentation, release information, and support – which is precisely the full-cycle ownership model I have practised across defence, public sector, and InsurTech environments. The mention of medialer Vertrieb as a project context is a concrete signal that the platform is actively evolving rather than simply being maintained. *That is exactly the environment where structured delivery discipline and product curiosity compound.*

§ HONEST FRAMING

I have not worked inside a banking core-system or savings-bank IT vendor previously; my financial-product background comes from the payments and InsurTech side. The transferable mechanic is strong: I have spent years turning complex, regulation-adjacent, multi-stakeholder requirements into structured user stories and stable sprint deliveries in environments where ambiguity and legacy constraints were the norm.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting and edge-case generation
 - **GPT**, specification review and user story refinement
 - **GitHub Copilot**, in-repo implementation support
 - **Cursor / VSCode**, assisted code navigation and review
 - **Lovable**, rapid front-end prototyping
 - **Gamma.app**, structured stakeholder documentation
 - **n8n**, workflow and integration design
 - **Framer**, design-heavy prototype work
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, OpenShift, Argo Workflows, Dagster, dbt, DuckDB, Jenkins, Bitbucket, Git, MicroStrategy, Redpanda, Ionic, Shopware, low-code insurance platforms.

§ SIDE PROJECT

BACKTEST ENGINE & DEV AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Self-built crypto market backtest engine and autonomous dev-agent framework.

- Implements a file-queue-based agent loop for autonomous development tasks and multi-agent orchestration.
 - Backtest engine designed for perpetual futures and spot strategies with market microstructure awareness.
 - Active development tracked across multiple repositories on GitHub.
 - Demonstrates end-to-end autonomous delivery capability directly relevant to agentic and integration product work.
-

§ HOW I WOULD WORK AT FINANZ INFORMATIK

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Walk the Internet-Filiale framework with the team, read existing user stories and release documentation, and map where specification hand-offs currently lose fidelity between business request and engineering ticket.

WEEK 2

Slice and clarify.

Pick the highest-friction backlog items, rewrite them as properly sized user stories with explicit acceptance criteria, and validate the result with both the technical leads and internal customer contacts.

WEEK 3+

Own and deliver.

Take full cycle responsibility for a defined functional area – requirements through release information – and establish a repeatable refinement rhythm that reduces back-and-forth between specification and implementation.

I COVER LETTER

Dear Hiring Team at Finanz Informatik,

The Internet-Filiale is infrastructure in the truest sense: tens of millions of banking customers touch it every day without knowing its name, and the savings banks that depend on it need it to be reliable, well-documented, and continuously improving. That combination of platform scale and craft-level attention to specification is what draws me to this role.

My background is in exactly the kind of full-cycle Product Owner work your posting describes. At Rohde & Schwarz I owned a defence-critical AI data platform end-to-end – from initial requirements workshops with multinational stakeholders through user story writing, acceptance criteria, implementation support, test, and GitOps rollout. At the Federal Employment Agency I held the additional responsibility of Deputy IT Security Officer while simultaneously driving new analytics features and managing Kubernetes migrations. In both cases the job was to hold the product together across engineering, QA, compliance, and external clients simultaneously. That is the posture I would bring to the Internet-Filiale framework.

At Emil Group I inherited a team that had lost sprint discipline under delivery pressure, a product in prototype state, and clients who had stopped trusting the roadmap. I split a bloated seventeen-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product workshops until client confidence returned. I mention this

not as a turnaround story but as evidence that I take the organisational and communication side of a Product Owner role as seriously as the specification work itself.

Earlier in my career I co-founded Kvitt Payment Solutions, a group-based P2P payments product that was later acquired and operated by Sparkasse. The product ran on PSP integrations and mobile-first UX. That Sparkasse context is not lost on me: the Sparkassen-Finanzgruppe is the distribution layer my own early product eventually joined, and I have a concrete sense of what banking customers and savings-bank staff actually need from a digital branch interface.

The role asks for someone who is eigenverantwortlich, lösungsorientiert, and genuinely motivated to shape a product rather than just process tickets. That is an accurate description of how I prefer to work. I look forward to the conversation.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Owner and Product Manager with nearly ten years of full-cycle delivery experience across regulated, infrastructure-grade software environments. Specialises in translating complex, multi-stakeholder requirements into structured, dev-ready specifications and stable sprint deliveries. Proven across defence (FCAS), public-sector analytics, InsurTech SaaS, and healthcare – always in environments where legacy constraints, compliance obligations, and shifting priorities are the baseline, not the exception. Operates with low overhead, high accountability, and strong cross-functional communication.

§ CORE STRENGTHS

- Full-cycle PO ownership: requirements through release documentation
- Structured user story writing and acceptance criteria discipline
- Cross-functional stakeholder alignment across business, engineering, and QA
- Sprint discipline restoration and backlog management under delivery pressure
- Technical fluency enabling direct engagement with engineering teams
- Regulated and compliance-adjacent product environments
- Client trust building through transparent, structured communication
- Configuration management and release coordination awareness

- AI-native workflow integration for specification and delivery acceleration

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level issues in OpenShift independently, delivering in one week a feature engineers had not shipped in over a year
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA
- Responsible for data transparency, audit trails, and full data provenance with multinational stakeholders

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Standardised CI/CD with full test integration at build time and managed major Kubernetes system upgrades
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Introduced Dagster for automated ETL and indicator generation, replacing manual processes

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline: split a bloated 17-person team into focused Scrum units, reintroduced velocity tracking and structured refinement
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Integrated CGM interface into hospital information system workflows
- Built stakeholder trust through transparent communication of technical complexity involving legacy APIs and external databases

§ FOUNDER & EARLY-STAGE EXPERIENCE

- **Co-Founder, CDO & Head of HR – Smart Soil Technologies (2021):** Digital tooling, financial planning, and investor relations for a vertical farming technology company.
- **Product Owner – COVID-19 Data Platform, Bundesdruckerei (2021):** RKI projects DIM and DESH; secure data structures and identity management.
- **Proxy Product Owner – AOK Health Insurance ITSCare (2019–2020):** Migration of internal webshop to Shopware including complex catalogue and API integration and customisable approval policies.
- **Project Lead – Enercon (2019):** Full IT modernisation of a specialist manufacturing site.
- **Product Owner – Qcrypt AG (2016–2018):** Quantum-secure encryption product; served as deputy IT security officer.
- **Founder & CFO – Kvitt Payment Solutions (2013–2018):** Group-based P2P payments; PSP integration, full UX/UI design, mobile app prototype. Later acquired and operated by Sparkasse.
