

Philipp Hilbert. *Product Owner for digital banking infrastructure.*

Positioning, nearly ten years owning complex software products end-to-end – from requirements to release – now applying that discipline to banking-grade platforms.

Dear Hiring Team at Finanz Informatik,

The Internet-Filiale is infrastructure in the truest sense: tens of millions of banking customers touch it every day without knowing its name, and the savings banks that depend on it need it to be reliable, well-documented, and continuously improving. That combination of platform scale and craft-level attention to specification is what draws me to this role.

My background is in exactly the kind of full-cycle Product Owner work your posting describes. At Rohde & Schwarz I owned a defence-critical AI data platform end-to-end – from initial requirements workshops with multinational stakeholders through user story writing, acceptance criteria, implementation support, test, and GitOps rollout. At the Federal Employment Agency I held the additional responsibility of Deputy IT Security Officer while simultaneously driving new analytics features and managing Kubernetes migrations. In both cases the job was to hold the product together across engineering, QA, compliance, and external clients simultaneously. That is the posture I would bring to the Internet-Filiale framework.

At Emil Group I inherited a team that had lost sprint discipline under delivery pressure, a product in prototype state, and clients who had stopped trusting the roadmap. I split a bloated seventeen-person team into focused Scrum units, reintroduced velocity tracking and structured refinement, and ran weekly product workshops until client confidence returned. I mention this not as a turnaround story but as evidence that I take the organisational and communication side of a Product Owner role as seriously as the specification work itself.

Earlier in my career I co-founded Kvitt Payment Solutions, a group-based P2P payments product that was later acquired and operated by Sparkasse. The product ran on PSP integrations and mobile-first UX. That Sparkasse context is not lost on me: the Sparkassen-Finanzgruppe is the distribution layer my own early product eventually joined, and I have a concrete sense of what banking customers and savings-bank staff actually need from a digital branch interface.

The role asks for someone who is eigenverantwortlich, lösungsorientiert, and genuinely motivated to shape a product rather than just process tickets. That is an accurate description of how I prefer to work. I look forward to the conversation.

Best regards, *Philipp Hilbert*
