

Philipp Hilbert. *AI Product Manager for real-estate intelligence.*

Positioning, a hands-on PM with six years of B2B SaaS delivery and a working AI-native stack, ready to turn Engel & Völkers data into production-grade AI features.

§ WHY ENGEL & VÖLKERS

Engel & Völkers sits at the intersection of a data-rich, relationship-driven industry and a genuine mandate to digitise it – the job description makes clear this is not an exploration exercise but delivery work with multinational stakeholder reach. The explicit requirement to identify concrete AI use cases across business units, translate them into regulated, scalable implementations, and drive internal adoption is exactly the product surface I have been operating on: at Rohde & Schwarz for a government AI data platform, and at the Federal Employment Agency for a public analytics product used across German regions. The Hamburg headquarters and international franchise network create the kind of cross-cultural, cross-functional complexity I navigate well. *That is exactly the environment where my strengths compound.*

§ HONEST FRAMING

I have not worked in real-estate or PropTech directly. The transferable mechanic is strong: every role I have held required mapping unfamiliar operational workflows – insurance product life cycles at Emil Group, hospital patient flows at CLINET, defence data pipelines at Rohde & Schwarz – into structured requirements and then shipping them. Domain knowledge in real estate is acquirable in weeks; the underlying PM craft is not.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, spec drafting, edge-case generation, code review
- **GPT**, stakeholder communication drafts and structured analysis
- **Gemini**, cross-model validation and document summarisation
- **GitHub Copilot**, in-editor implementation support
- **Cursor / VSCode**, AI-assisted refactoring and test generation
- **Lovable**, rapid front-end prototyping
- **n8n**, multi-agent workflow orchestration
- **Gamma.app**, internal presentation and use-case communication

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Jenkins, Dagster, dbt, DuckDB, Docker, Redpanda, MicroStrategy, Shopware, AngularJS, Ionic, CGM API integration, GitOps pipelines, CI/CD with full test integration.

§ HOW I WOULD WORK AT ENGEL & VÖLKERS

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow advisors, listing managers, and internal ops teams to map the actual information flows behind a property transaction, identifying where manual steps, data gaps, or repeated decisions could absorb an AI layer.

WEEK 2

Scope and slice.

Draft a ranked use-case shortlist with rough feasibility signals – what existing data is available, which GPT or Gemini API surface fits, what regulatory constraint applies – and pressure-test it with the tech team and one key business stakeholder.

WEEK 3+

Build, validate, ship.

Move the highest-confidence use case into a prototype using Lovable or a thin API wrapper, run a structured test with a real advisor cohort, and establish the feedback loop and KPI baseline before broader rollout.

I COVER LETTER

Dear Katharina,

The role you have posted is product work I have been doing for the past three years, just in different industries. At Rohde & Schwarz I owned the full product lifecycle for an AI data management platform inside the FCAS defence programme: requirements, prototyping, testing, GitOps rollout, and stakeholder alignment across architects, data scientists, and government clients. At the Federal Employment Agency I delivered labour market analytics on a platform used across German regions, introduced Dagster for automated ETL pipelines, and served simultaneously as Deputy IT Security Officer – exactly the regulatory awareness the Engel & Völkers posting calls out. The domain changes; the discipline does not.

What draws me specifically to this role is the use-case identification scope. Engel & Völkers operates across 35 countries with over 16,000 people under one brand, which means the potential surface for AI automation – listing descriptions, lead qualification, advisor support tooling, document processing, market analytics – is large and largely unmapped. I know how to take that surface seriously: start with the operational workflow, find the decision that is currently manual and repeated, confirm the data is actually there, and build the smallest thing that proves value before scaling. That is how the Claims Center module at Emil Group got from concept to production, and how an infrastructure feature at Rohde & Schwarz that had been requested for over a year got delivered in one week.

On the tooling side, I work daily with GPT, Claude, and Gemini for specification, edge-case generation, and structured analysis. I have built multi-agent automation workflows in n8n and designed agentic pipelines in file-queue-based architectures. I understand Low-Code and No-Code tools not as workarounds but as prototyping accelerators that let a PM validate a use case before committing engineering resources. The posting's explicit mention of Make, n8n, and API fluency matches my current working environment precisely.

My German is native and my English is C2 – the YouTube link in my profile is a product pitch I recorded for Qcrypt AG's quantum-encryption product if you want a spoken sample. I am based in Berlin, open to the hybrid model at the Hamburg HQ, and available within four weeks of an offer.

I would welcome a conversation about where the AI use-case pipeline currently stands and where you see the most immediate leverage.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Manager with nearly ten years of experience translating complex operational workflows into scalable software. Background spans AI data platforms in regulated government and defence environments, public analytics, B2B InsurTech SaaS, and healthcare mobile applications. Fluent in AI-native workflows including GPT, Claude, Gemini, GitHub Copilot, n8n, and rapid prototyping tools. Comfortable with cross-functional stakeholder alignment across business, engineering, data science, compliance, and executive layers. Six years of dedicated B2B SaaS PM experience with a consistent track record from MVPs to scalable production rollouts.

§ CORE STRENGTHS

- AI use-case identification, scoping, and regulated implementation
- End-to-end feature delivery: requirements to GitOps rollout
- B2B SaaS backlog management and sprint discipline
- Translating business requirements into user-centred, dev-ready specs
- Multi-agent workflow design with n8n and API orchestration
- Cross-functional alignment across business, engineering, and compliance
- Data quality, provenance, and ETL pipeline ownership
- Rapid prototyping with Low-Code, No-Code, and LLM-assisted tools
- German native and English C2, effective with multinational stakeholders

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned the full product lifecycle for a central AI and data management platform within the FCAS European defence programme – research, requirements, prototyping, testing, and GitOps-based rollout
- Delivered automated data quality filtering, tagging, reproducible transformation pipelines, and audit trails with full data provenance aligned to SafeAI and ExplainableAI requirements
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature requested from engineers for over a year
- Led cross-functional team including architect, data scientists, backend and frontend engineers, and QA with multinational stakeholders

Tech: Kotlin (Spring Boot), Python, PostgreSQL, MongoDB, Redpanda, Kubernetes, Argo Workflows, ArgoCD, OpenShift

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Advanced the Arbeitsmarktmonitor analytics platform for regional labour market and demographic data, serving users across German regions
- Introduced Dagster for automated ETL and indicator generation; standardised CI/CD with full test integration at build time
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage – directly relevant to regulatory requirements named in the posting
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Delivered labour shortage analytics, flexible regional comparison, and modernised admin tooling

Tech: Python, Django, JavaScript, PostgreSQL, dbt, Dagster, DuckDB, MicroStrategy, Kubernetes, Jenkins

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation on a B2B SaaS platform for insurers, reinsurers, MGAs, and brokers
- Designed and delivered a Claims Center module from concept to production rollout
- Re-established sprint discipline; split a bloated 17-person team into effective Scrum units with ownership and deputy concepts, reintroducing velocity tracking and structured refinement
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops

Tech: Low-code platform, Java, HTML/CSS, Kubernetes, REST APIs

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage on a mobile-first iOS and Android pilot app for hospitals
- Integrated CGM interface into hospital information system workflows; communicated technical complexity of legacy APIs transparently to stakeholders
- Led a small team under tight deadlines with strict focus on highest-leverage features

Tech: AngularJS, Ionic, Python, Kubernetes, CGM API integration

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner / Deputy IT Security Officer

- Owned product architecture for quantum-secure encryption based on one-time-pad keys and true random number generator hardware; USP: setup under two minutes, no technical knowledge required
- Served as deputy IT security officer; managed attack vector analysis and compliance framing

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Founded and built a group-based P2P payment platform; handled PSP integration, full UX/UI design, and mobile app prototype
- Later acquired and operated by Sparkasse

AOK HEALTH INSURANCE / ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware including complex catalogue and API integration and customisable approval policies
