Sehr geehrtes congstar-Team,

congstar holds a genuinely unusual position in the German mobile market: a brand that competes on simplicity and price while running on Deutsche Telekom's network infrastructure. That combination creates a product challenge that interests me – the app has to feel independent and approachable while the backend complexity of a full MVNO sits just beneath the surface. I have spent the last several years working in environments with exactly that kind of tension between visible simplicity and invisible complexity.

At Emil Group I inherited a B2B InsurTech platform where delivery had stalled, a 17-person scrum team was producing noise rather than output, and client trust was eroding. I split the team, reintroduced sprint discipline, rebuilt the backlog from scratch, and ran weekly product workshops until the client started looking forward to them rather than dreading them. The Claims Center module went from concept to production during that period. That experience taught me that backlog health is a cultural problem as much as a process one, and that a PO's most important job is often to create enough clarity that engineers can make good decisions independently.

At CLINET Platforms I owned a mobile-first hospital app across iOS and Android – the closest direct parallel to this role. The constraint environment there was severe: legacy CGM APIs, external hospital information systems, strict clinical workflows, and a small team with no slack. I made hard prioritisation calls daily, communicated technical blockers transparently to non-technical hospital stakeholders, and shipped core patient-facing flows on time. The discipline of working mobile-first, where screen real estate is scarce and every tap counts, shaped how I think about product decisions.

At Rohde & Schwarz I delivered autonomous feature sets end-to-end on a defence-grade AI data platform – writing user stories, supporting implementation, running acceptance testing, and managing GitOps-based rollout myself when the team was bottlenecked. That kind of hands-on fluency is not because I want to be an engineer; it is because I have found that a PO who can

read a PR, understand a deployment pipeline, and unblock an infrastructure issue independently earns a different kind of trust from development teams than one who cannot.

I am based in Berlin, hold German citizenship, and am available within four weeks of an offer. I would be glad to talk through how my experience maps to where the congstar app is heading.

Best regards, *Philipp Hilbert*
