

Philipp Hilbert. *Product Owner for high-assurance mobile security platforms.*

Positioning, a security-fluent Product Owner with a proven record in regulated environments, bringing deputy IT-security officer experience and end-to-end delivery ownership to Apple indigo.

§ WHY MATERNA VIRTUAL SOLUTION

The Apple indigo programme sits at the intersection of mobile platform depth, BSI compliance, and organisational change management in sovereign government contexts – a combination few product teams navigate well. Materna Virtual Solution is the rare company where security is not a checklist bolted onto a roadmap but the product's reason for existing, which changes how every trade-off is framed. The posting calls explicitly for someone who can translate regulatory requirements into user stories while holding relationships with administrators, buyers, and development simultaneously – that is precisely the shape of work I have done at Rohde & Schwarz on the FCAS programme and at the Bundesagentur für Arbeit as Deputy IT Security Officer. *That is exactly the kind of structured, high-stakes ownership environment where my strengths compound.*

§ HONEST FRAMING

I have not shipped products inside the Apple Enterprise or VS-NfD ecosystems specifically. My security product ownership (Qcrypt AG, Bundesagentur für Arbeit IT-SV role) and regulated-environment delivery (FCAS, Bundesdruckerei COVID platform) give me the underlying mechanics, but the Apple indigo toolchain and BSI approval process are domains I would be learning on the job. My transferable strength is translating dense regulatory and technical

constraints into a prioritised, developer-ready backlog – a pattern I have applied across defence, public sector, and healthcare.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting and edge-case generation
 - **GPT**, stakeholder communication and specification review
 - **GitHub Copilot**, in-repo development support
 - **Cursor/VSCode**, lightweight feature prototyping
 - **Lovable**, rapid UI mock-up and concept validation
 - **Framer**, design-heavy wireframing
 - **Gamma.app**, structured presentation of roadmap and sprint outcomes
 - **n8n**, agentic workflow automation
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, PostgreSQL, MongoDB, Kubernetes, ArgoCD, Argo Workflows, OpenShift, Helm, Terraform, Jenkins, Bitbucket, GitOps pipelines, Dagster, dbt, DuckDB, MicroStrategy, Redpanda, REST APIs, AngularJS, Ionic, CGM API integration, Shopware.

§ SIDE PROJECT

QCRYPT AG – QUANTUM-SECURE ENCRYPTION PRODUCT [YOUTUBE.COM/WATCH?V=NT06F71LGFE](https://www.youtube.com/watch?v=NT06F71LGFE) →

Co-founded and owned the product for a quantum-resistant, one-time-pad encryption platform targeting non-technical end users in secure communication contexts.

- Delivered a hardware-paired encryption product based on OTP keys generated by a true random number generator – zero trust in software entropy.
- Architected the backup, restore, and checkpoint flows, ensuring no key material was ever derivable from stored state.

- Drove the USP that setup required under two minutes and no technical background, making a cryptographically strong solution accessible to the administration audience Materna Virtual Solution serves.
- Served as deputy IT security officer throughout development, embedding security governance into the product lifecycle from the first sprint.

§ HOW I WOULD WORK AT MATERNA VIRTUAL SOLUTION

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the development teams and existing backlog, read the current roadmap against the Apple indigo certification requirements, and interview internal stakeholders in security, sales, and engineering to build a clear picture of where the prioritisation logic is solid and where it relies on tacit knowledge.

WEEK 2

Sharpen the backlog.

Work through the top-priority epics with the team, rewriting acceptance criteria where they are ambiguous, surfacing regulatory dependencies that could block a sprint, and producing a first-draft refinement of the backlog ordered by security-compliance value.

WEEK 3+

Ship and close loops.

Run the first sprint I own end-to-end – planning, daily coordination, review – and establish the stakeholder communication rhythm with external contacts in the public sector, so release planning reflects both delivery reality and approval timelines.

I COVER LETTER

Dear Hiring Team at Materna Virtual Solution,

Product ownership in the government security space demands a specific combination: enough technical depth to challenge engineering estimates, enough regulatory literacy to represent compliance requirements accurately to development teams, and enough communication discipline to keep administrators, security officers, and product management aligned without

creating an information bottleneck. My decade of product ownership across defence, public sector analytics, and regulated healthcare has been built around exactly that combination.

At Rohde & Schwarz, I owned the product for a central AI and data management platform within the European defence programme FCAS. That context required me to translate multinational stakeholder requirements – many of them classified or operationally sensitive – into developer-ready user stories while maintaining audit trails, data provenance, and SafeAI transparency concepts that would survive external review. I delivered feature sets autonomously from user story through acceptance criteria through GitOps-based rollout, reducing deployment cycles from several days to under forty minutes. The regulatory and operational pressure in that environment is the closest parallel I can offer to the Apple indigo context.

At the Bundesagentur für Arbeit, I served as Deputy IT Security Officer while simultaneously owning the Arbeitsmarktmonitor product. The dual role forced a habit I have carried since: treating security requirements not as constraints imposed after the fact but as inputs to the initial prioritisation. That is the mindset the VS-NfD and KRITIS context demands, and it is already how I run refinement.

Earlier, as co-founder and Product Owner at Qcrypt AG, I was responsible for a quantum-secure encryption product targeting public administration users. The product had to be cryptographically rigorous and operationally trivial – under two minutes to set up, no technical knowledge required. That tension between security depth and usability simplicity is precisely what the Apple indigo platform navigates: enterprise-grade mobile security that field personnel can actually use. I also served as deputy IT security officer at Qcrypt, which gave me early exposure to the governance and approval processes that products in this space must satisfy.

The role you have described – owning roadmap, backlog, stakeholder coordination, and release planning for the Trust product family – maps cleanly onto the scope I have held for the past several years. I am comfortable facilitating refinement with engineers in the morning and presenting a product strategy to public-sector decision-makers in the afternoon. I am fluent in Scrum, direct in written and spoken German and English, and comfortable with the kind of iterative, compliance-constrained delivery that Apple indigo requires. I would welcome a conversation about how my background fits the specifics of the role.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Manager and Product Owner with nearly ten years of experience across defence, public sector, regulated healthcare, and security products. Proven record of translating dense regulatory and technical constraints into prioritised, developer-ready backlogs, and of managing cross-functional stakeholder relationships from engineering to government buyers. Served as Deputy IT Security Officer at two separate organisations; co-founded and owned a quantum-secure encryption product for public administration. Equally comfortable running sprint ceremonies and briefing senior decision-makers on product strategy.

§ CORE STRENGTHS

- Regulatory requirements into developer-ready epics and stories
 - Security product ownership in government and defence contexts
 - Backlog management and sprint discipline under compliance pressure
 - Deputy IT Security Officer experience, audit trails, data governance
 - Cross-functional stakeholder alignment across engineering, security, and public sector
 - Quantum-resistant encryption and hardware security product background
 - End-to-end feature delivery, GitOps rollout, acceptance criteria ownership
 - Workshop facilitation for technical and non-technical audiences
 - AI-native product execution and rapid prototyping
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation – FCAS European Defence Programme

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout under multinational stakeholder oversight
- Implemented full data provenance, audit trails, and transparent evaluation concepts (SafeAI, ExplainableAI) meeting defence-grade traceability requirements
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps with ArgoCD across an OpenShift environment
- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature the project lead had been requesting from engineers for over a year

- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Public Data Analytics

- Served as Deputy IT Security Officer (IT-SV) with responsibility for compliance, governance, and data lineage – combining security oversight with active product ownership
- Delivered new platform features including labour shortage analytics and modernised admin tooling; introduced Dagster for automated ETL and indicator generation
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration at build time
- Managed structured stakeholder communication across public sector, legal, and engineering counterparts

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Redesigned sprint structure: split a bloated 17-person team into smaller Scrum units, reintroduced velocity tracking and structured refinement practices
- Delivered a Claims Center module from concept to production rollout on a B2B platform serving primary insurers, reinsurers, MGAs, and brokers
- Regained client trust in a prototype-stage environment through structured communication and weekly product workshops
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered iOS and Android pilot app for hospitals: digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Integrated CGM interface into hospital information system (KIS) workflows, navigating legacy API and external database constraints
- Communicated technical complexity transparently to clinical stakeholders, maintaining trust under tight delivery pressure

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Co-Founder, Product Owner & Deputy IT Security Officer

- Owned product architecture for a quantum-secure encryption platform based on one-time-pad keys and true random number generator hardware
- Responsible for backup, restore/checkpoint, and data-encryption product flows; no key material derivable from stored state
- Drove the core USP: full setup in under two minutes, no technical knowledge required – making cryptographically strong security accessible to non-technical government and administration users
- Served concurrently as deputy IT security officer, embedding security governance into the product lifecycle from inception

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payment product on a P2P backbone; owned PSP integration and full UX/UI design through to mobile app prototype
- Platform later acquired and operated by Sparkasse

BUNDESDRUCKEREI – COVID-19 DATA PLATFORM 2021

Product Owner

- Owned backlog for RKI projects DIM and DESH; responsible for secure data structures and identity management in a high-visibility public health context

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Managed migration of internal webshop to Shopware, including complex catalogue and API integration and configurable approval policies
