

Philipp Hilbert. *Product Owner for high-security mobile platforms.*

Positioning, a hands-on Product Owner with ten years in regulated, security-sensitive environments, ready to take ownership of the Apple indigo Trust product line from day one.

§ WHY MATERNA VIRTUAL SOLUTION

The Trust product family sits at the intersection of mobile platform engineering, regulatory compliance, and real government accountability – a combination that rarely appears in a single product role. The job description calls out VS-NfD classification, BSI alignment, and Zero Trust architecture in the same breath, which requires a Product Owner who is comfortable both in the backlog and in a room with security auditors and procurement officers. That combination is not common, and it is precisely where my experience at Rohde & Schwarz (FCAS), Bundesdruckerei (RKI), and the Federal Employment Agency (IT-SV deputy) has sharpened me. The signal that stands out concretely: Materna holds a VS-NfD approval for Apple indigo – that is an asset most software companies will never earn, and defending and extending it through responsible product evolution is the kind of stewardship I find genuinely compelling. *That is exactly the environment where my strengths compound.*

§ HONEST FRAMING

I have not shipped software inside the Apple Enterprise or MDM/device management stack specifically, so day one will involve a learning curve on Apple Business Manager, Supervised mode mechanics, and the indigo platform internals. What I do bring is a proven pattern of parachuting into technically dense, regulated product environments – defence (FCAS), public health identity (Bundesdruckerei), labour market data (BSI-adjacent compliance as IT-SV) – and

becoming the person who translates between security architects, engineers, and institutional stakeholders within weeks, not months.

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, edge-case generation, stakeholder document preparation
 - **GPT**, user story refinement and acceptance criteria reviews
 - **GitHub Copilot**, in-repo support during implementation sprints
 - **Cursor / VSCode**, lightweight code navigation and PR review
 - **Lovable**, rapid UI prototype generation for early discovery
 - **Framer**, design-heavy stakeholder mockups
 - **Gamma.app**, internal product briefings and roadmap presentations
 - **n8n**, agentic workflow automation and process prototyping
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kotlin (Spring Boot), Python, Django, JavaScript, AngularJS, Ionic, PostgreSQL, MongoDB, Redpanda, Kubernetes, ArgoCD, Argo Workflows, Helm, OpenShift, Jenkins, Bitbucket, GitOps pipelines, dbt, Dagster, DuckDB, MicroStrategy, REST APIs, Docker, CI/CD with full test integration at build time.

§ SIDE PROJECT

QCRYPT AG – QUANTUM-SECURE ENCRYPTION PRODUCT [YOUTUBE.COM/WATCH?V=NT06F71LGFE](https://www.youtube.com/watch?v=NT06F71LGFE) →

One-time-pad encryption with true random number generator hardware, built for non-technical end users.

- Owned the full product architecture for backup, restore/checkpoint, and data-encryption flows.
- Architecture centred on OTP keys generated by true-RNG hardware – no software entropy, no key reuse, no network dependency.
- Delivered a setup flow targeting under two minutes with zero technical knowledge required on the user side.

- Directly relevant: demonstrates hands-on security product ownership, deputy IT security officer experience, and the ability to communicate encryption concepts to non-technical government and enterprise buyers – core to the indigo stakeholder landscape.

§ HOW I WOULD WORK AT MATERNA VIRTUAL SOLUTION

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the existing Trust product team, read every open backlog item and acceptance criterion against the VS-NfD approval documentation, and produce a written gap map of where requirements traceability is strong and where it is thin.

WEEK 2

Align and sharpen.

Run a structured refinement session with engineering and security stakeholders to close the highest-risk story gaps identified in week one, producing acceptance criteria that are auditable and testable.

WEEK 3+

Own and ship.

Take full backlog ownership, lead sprint planning and refinement independently, and deliver the first prioritised story set with clear regulatory traceability from BSI requirement through to acceptance test.

I COVER LETTER

Dear Materna Virtual Solution team,

I am applying for the Product Owner Trust Products / Apple indigo role because it combines three things that have defined my best work: security-sensitive product environments, institutional stakeholders who expect precision rather than marketing, and a product that carries genuine regulatory weight. The VS-NfD approval for Apple indigo is not a feature – it is a compliance artefact that shapes every product decision downstream, and I understand what it takes to operate inside that kind of constraint.

My most directly relevant experience is at Rohde & Schwarz, where I owned a central AI and data management platform inside the FCAS European defence programme. That environment required me to translate multinational security requirements into executable user stories, maintain full data provenance and audit trails for SafeAI and ExplainableAI compliance, and unblock infrastructure-level problems in OpenShift independently when engineering capacity was unavailable. Before that, at the Federal Employment Agency, I served as Deputy IT Security Officer while simultaneously owning the product backlog for the Arbeitsmarktmonitor – a dual role that forced me to hold compliance and delivery velocity in balance every sprint. Earlier still, at Bundesdruckerei, I owned the product backlog for the RKI's DIM and DESH platforms, where secure data structures and identity management were non-negotiable table stakes, not optional enhancements.

My security product ownership goes back further than my employment history. As co-founder and Product Owner at Qcrypt AG, I owned the architecture for a quantum-secure one-time-pad encryption product built on true random number generator hardware, and I served as deputy IT security officer there as well. The product was designed specifically to be deployable by non-technical users in under two minutes – a constraint that required exactly the kind of security-usability balancing act that mobile VS-NfD workplaces demand. I documented and promoted that product in English for enterprise and government buyers, which I mention because the role requires verhandlungssichere English and I want to point to a concrete artifact: the YouTube video linked in my profile shows me presenting Qcrypt's value proposition in a business context.

On the process side, I have restructured and stabilised delivery teams under pressure more than once. At Emil Group, I inherited a 17-person Scrum team that had lost sprint discipline entirely, split it into smaller units with clear ownership, reintroduced velocity tracking, and rebuilt client trust in a prototype-stage environment through structured weekly workshops. That experience taught me that Product Owner effectiveness in security-sensitive B2B environments depends as much on stakeholder communication and delivery credibility as it does on backlog craft.

I am based in Berlin and genuinely open to relocating to Munich, which I understand to be your primary office. I am available within four weeks of an offer. I would welcome the opportunity to discuss how my background maps to the specific challenges the Trust product line is facing right now.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Hands-on Product Owner and Product Manager with nearly ten years of experience in regulated, security-sensitive software environments. Background spans defence AI platforms (FCAS/Rohde & Schwarz), public sector data compliance (Federal Employment Agency, Bundesdruckerei), quantum-secure encryption product ownership (Qcrypt AG), and B2B SaaS delivery. Comfortable operating where requirements derive from BSI guidelines, compliance audits, and institutional stakeholders rather than market metrics alone. Strong in cross-functional alignment across security, engineering, and government procurement audiences. Fluent in AI-native product execution and autonomous feature delivery.

§ CORE STRENGTHS

- Translating regulatory and security requirements into dev-ready stories
 - Backlog ownership in compliance-constrained environments
 - Deputy IT security officer experience, governance and data lineage
 - Cross-functional alignment across security, engineering, and government stakeholders
 - Sprint discipline, team restructuring, velocity recovery
 - Security product architecture: encryption, audit trails, data provenance
 - AI-native product execution and rapid prototyping
 - Stakeholder communication for non-technical institutional buyers
 - Founder-level pragmatism, low ego, high agency
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered a central AI and data management platform inside the FCAS European defence programme with full data provenance, audit trails, SafeAI and ExplainableAI compliance
- Maintained regulatory traceability across multimodal datasets (image, audio, tabular) for multinational security stakeholders
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps rollout
- Reduced deployment times from several days to 20–40 minutes by introducing ArgoCD-based GitOps

- Unblocked infrastructure-level issues in OpenShift independently; delivered in one week a feature that had been blocked for over a year
- Led cross-functional team: architect, data scientists, backend/frontend engineers, QA

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Served as Deputy IT Security Officer (IT-SV) with responsibility for compliance, governance, and data lineage across the Arbeitsmarktmonitor platform
- Delivered new analytical features including labour shortage analytics and flexible regional comparison tools
- Introduced Dagster for automated ETL and reproducible indicator generation
- Migrated legacy systems to Kubernetes and standardised CI/CD with full test integration at build time

EMIL GROUP 2022

Product Manager, InsurTech SaaS Platform

- Re-established sprint discipline and delivery stability in a B2B regulated SaaS environment; split a 17-person team into smaller Scrum units with clear ownership and deputy concepts
- Designed and delivered a Claims Center module from concept to production rollout
- Rebuilt client trust through structured weekly product workshops in a prototype-stage environment
- Delivered modules across product configuration, underwriting, policy issuance, document management, and workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered a mobile-first iOS and Android pilot app for hospitals under strict deadline and regulatory constraints
- Built stakeholder trust through transparent communication of technical complexity involving legacy APIs and external hospital information systems
- Delivered core flows including digital anamnesis, patient document storage, and CGM interface integration into KIS workflows

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner / Deputy IT Security Officer

- Owned product architecture for backup, restore/checkpoint, and data-encryption flows on a quantum-secure OTP product built on true random number generator hardware
- Defined and enforced the constraint that setup must complete in under two minutes with no technical knowledge required – core to government and enterprise buyer acceptance
- Served as deputy IT security officer; responsible for attack vector documentation and mitigation posture
- Presented the product in English to enterprise and government buyers (video sample available)

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Co-founded a group-based P2P payments startup; owned PSP integration, full UX/UI design, and mobile app prototype
- Later acquired and operated by Sparkasse

BUNDESDRUCKEREI – COVID-19 DATA PLATFORM 2021

Product Owner

- Owned backlog for RKI projects DIM and DESH; secure data structures and identity management in a high-stakes public health context

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Migrated internal webshop to Shopware including complex catalogue and API integration and configurable approval policies for a regulated insurance procurement environment
