Dear Materna Virtual Solution team,

I am applying for the Product Owner Trust Products / Apple indigo role because it combines three things that have defined my best work: security-sensitive product environments, institutional stakeholders who expect precision rather than marketing, and a product that carries genuine regulatory weight. The VS-NfD approval for Apple indigo is not a feature – it is a compliance artefact that shapes every product decision downstream, and I understand what it takes to operate inside that kind of constraint.

My most directly relevant experience is at Rohde & Schwarz, where I owned a central AI and data management platform inside the FCAS European defence programme. That environment required me to translate multinational security requirements into executable user stories, maintain full data provenance and audit trails for SafeAI and ExplainableAI compliance, and unblock infrastructure-level problems in OpenShift independently when engineering capacity was unavailable. Before that, at the Federal Employment Agency, I served as Deputy IT Security Officer while simultaneously owning the product backlog for the Arbeitsmarktmonitor – a dual role that forced me to hold compliance and delivery velocity in balance every sprint. Earlier still, at Bundesdruckerei, I owned the product backlog for the RKI's DIM and DESH platforms, where secure data structures and identity management were non-negotiable table stakes, not optional enhancements.

My security product ownership goes back further than my employment history. As co-founder and Product Owner at Qcrypt AG, I owned the architecture for a quantum-secure one-time-pad encryption product built on true random number generator hardware, and I served as deputy IT security officer there as well. The product was designed specifically to be deployable by non-technical users in under two minutes – a constraint that required exactly the kind of security-usability balancing act that mobile VS-NfD workplaces demand. I documented and promoted that product in English for enterprise and government buyers, which I mention because the role

requires verhandlungssichere English and I want to point to a concrete artifact: the YouTube video linked in my profile shows me presenting Qcrypt's value proposition in a business context.

On the process side, I have restructured and stabilised delivery teams under pressure more than once. At Emil Group, I inherited a 17-person Scrum team that had lost sprint discipline entirely, split it into smaller units with clear ownership, reintroduced velocity tracking, and rebuilt client trust in a prototype-stage environment through structured weekly workshops. That experience taught me that Product Owner effectiveness in security-sensitive B2B environments depends as much on stakeholder communication and delivery credibility as it does on backlog craft.

I am based in Berlin and genuinely open to relocating to Munich, which I understand to be your primary office. I am available within four weeks of an offer. I would welcome the opportunity to discuss how my background maps to the specific challenges the Trust product line is facing right now.

Best regards, *Philipp Hilbert*
