Dear genua team,

I am applying for the Product Owner role focused on cooperative products. The position maps closely onto work I have done repeatedly: taking a product that spans multiple external partners and internal teams, finding the integration seams where requirements go ambiguous, and driving it through to a coherent, shippable result.

At Rohde & Schwarz, I owned a data management platform for the FCAS defence programme – a multinational environment with strict audit requirements, multiple engineering disciplines, and a hard dependency on external data standards. I delivered features end-to-end, including user stories, acceptance criteria, implementation support, and GitOps-based rollout, while managing the cross-functional team and reporting to programme stakeholders. Separately, I served as deputy IT security officer at the Federal Employment Agency, where compliance, data lineage, and governance were daily constraints, not afterthoughts. That combination of delivery ownership and security-conscious thinking is directly relevant to what genua builds.

The cooperative product dimension is where I feel most at home. At Emil Group, the InsurTech platform integrated products from primary insurers, reinsurers, MGAs, brokers, and underwriters into a single configurable system. My job was to translate contradictory external requirements into a coherent backlog, re-establish sprint discipline in a team that had lost it, and rebuild client trust through structured communication – weekly workshops, transparent risk reporting, and consistent delivery. Earlier, at Qcrypt AG, I was the Product Owner for a quantum-secure encryption product built on true-RNG hardware, a role that included deputy IT security responsibilities and direct partner coordination. I delivered a product positioned around simplicity (sub-two-minute setup) in a domain that tends toward complexity for its own sake.

I define and prioritise requirements using market-oriented scoring and explicit risk framing – value, usability, feasibility, and viability – rather than loudest-voice-wins. I track KPIs from the

start of a product cycle, not as a retrospective exercise. And I am comfortable presenting status, risk, and trade-offs to senior stakeholders and external partners with the same clarity I use internally.

Genua's growth trajectory in the security product space, combined with the explicit mandate to manage the full product lifecycle across partner integrations, makes this a role I would take seriously from day one. I am based in Berlin, speak German natively, and am open to the Kirchheim location.

Best regards, *Philipp Hilbert*
