

Philipp Hilbert. *Product Owner who ships, not just prioritizes.*

Positioning, a hands-on Product Owner with ten years translating complex workflows into working software, ready to own the Mobexo roadmap from backlog to production.

§ WHY MOBEXO

Fleet management sits at the intersection of operational complexity, legacy processes, and genuine digitisation opportunity – exactly the kind of domain where a structured Product Owner creates compounding value. The posting names Azure OpenAI and React Native in the same stack as Dynamics CRM and SAP, which signals a team serious about building real software, not demo-ware. The explicit note that Scrum Inc rules apply, with 3-week sprints and real ceremonies, matches how I have worked at Rohde & Schwarz and Emil Group. *That combination of engineering rigour and direct customer contact is exactly the environment where I do my best work.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, spec drafting and edge-case generation
- **GPT**, stakeholder communication drafts and requirement analysis
- **GitHub Copilot**, in-repo feature work and acceptance-criteria refinement
- **Cursor / VSCode**, daily development environment
- **Lovable**, rapid UI prototyping before handing to designers
- **Framer**, design-heavy wireframe iterations
- **Gamma.app**, roadmap and stakeholder presentations
- **n8n**, automated workflow and agent orchestration

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Delivered production features across Kotlin (Spring Boot), Python, Django, JavaScript, PostgreSQL, MongoDB, Kubernetes, ArgoCD, Argo Workflows, OpenShift, Jenkins, Bitbucket, dbt, Dagster, DuckDB, MicroStrategy, REST APIs, AngularJS, Ionic, and Shopware; worked directly with Azure DevOps pipelines, and have hands-on experience integrating external APIs including CGM KIS interfaces and PSP connectors.

§ HOW I WOULD WORK AT MOBEXO

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the dev teams and key account contacts, map the current backlog state in Azure DevOps against the stated roadmap, and identify the single highest-friction item blocking the next sprint.

WEEK 2

Slice and validate.

Translate the top-priority stakeholder need into a concrete, sliced user story with acceptance criteria, walk it through refinement with the dev team, and confirm feasibility against the Azure Functions and Cosmos DB constraints.

WEEK 3+

Ship and communicate.

Own sprint planning end-to-end, deliver the first incremental feature to production, and establish a regular cadence of written stakeholder updates that connect each release to the Mobexo fleet digitisation vision.

I COVER LETTER

Dear Mobexo team,

Fleet management digitisation is a domain where the gap between what customers need and what legacy systems deliver is still wide. The Mobexo stack – Azure OpenAI alongside Dynamics CRM, React Native mobile apps, and SAP integration – tells me the team is building serious software to close that gap, not just wrapping spreadsheets in a web interface. That is the kind of product challenge I am drawn to.

My most recent role at Rohde & Schwarz was a government contract inside the FCAS defence programme, where I owned a central AI and data management platform for multimodal datasets. Working with multinational stakeholders in a high-stakes, regulated environment required exactly the balance the Mobexo posting describes: rational feature prioritisation, clear communication of the Mobexo vision equivalent, and the ability to move a cross-functional team – architect, data scientists, backend and frontend engineers, QA – without losing delivery momentum. I reduced deployment times from several days to 20–40 minutes by introducing GitOps, and I independently unblocked an OpenShift infrastructure issue that had been on the engineer backlog for over a year, delivering it in one week.

At Emil Group, an InsurTech B2B SaaS platform, I took over a sprint process that had effectively collapsed. A bloated 17-person team was missing velocity entirely. I split it into smaller Scrum units, reintroduced structured refinement, and recovered client trust through weekly product workshops and transparent communication. That experience maps directly to what the Mobexo posting asks for: stakeholder management with key customers, intuitive prioritisation of competing needs, and keeping a distributed, international dev team aligned on a shared vision.

Earlier, at the Proxy Product Owner role for AOK ITSCare, I led the migration of an internal webshop to Shopware, including complex catalogue and API integration with customisable approval policies – a project that required translating non-technical procurement requirements into dev-ready specifications under tight constraints. And at Qcrypt AG as Product Owner, I owned a quantum-secure encryption product end-to-end, including serving as deputy IT security officer, which gave me early experience bridging product, engineering, and security concerns in a regulated context.

Mobexo sits at an interesting moment: a fleet digitisation platform backed by a 150-year-old family company's infrastructure, moving fast on Azure and mobile. I am ready to own the roadmap, align the stakeholders, and ship working software in 3-week cycles. I would welcome a conversation.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Owner and Product Manager with nearly ten years of experience turning complex operational workflows into scalable software. Background spans regulated B2B SaaS platforms, government data analytics, defence AI systems, and early-stage founder environments. Comfortable in international, distributed dev teams operating under structured Scrum with real delivery pressure. Fluent in Azure DevOps-based pipelines, sprint discipline, stakeholder communication, and AI-native product execution. Brings a founder's pragmatism: low ego, high agency, and a consistent focus on shipping working software over managing process theatre.

§ CORE STRENGTHS

- Roadmap ownership with rational, evidence-based prioritisation
 - Backlog management and sprint discipline across 3-week Scrum cycles
 - Stakeholder alignment across business, engineering, QA, and key accounts
 - Translating operational customer needs into dev-ready requirements
 - Cross-functional team leadership including distributed international teams
 - AI-native product execution and rapid prototyping
 - Azure DevOps, CI/CD pipelines, and cloud-native infrastructure fluency
 - Mobile product delivery (iOS and Android)
 - Founder-level pragmatism with delivery focus
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout via ArgoCD
- Led a cross-functional team including architect, data scientists, backend and frontend engineers, and QA with multinational stakeholders
- Reduced deployment times from several days to 20–40 minutes by introducing GitOps
- Independently resolved an OpenShift infrastructure blocker that had been on the engineer queue for over a year – delivered in one week
- Built a central AI and data management platform for multimodal datasets with full data provenance and audit trails

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Delivered new analytics features including labour shortage dashboards, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation, standardised CI/CD with full test integration at build time
- Migrated legacy systems to Kubernetes and managed major system upgrades
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Re-established sprint discipline: split a bloated 17-person team into smaller, effective Scrum units and introduced ownership and deputy concepts
- Reintroduced velocity tracking and structured refinement practices; regained client trust through weekly product workshops
- Designed and delivered a Claims Center module from concept to production rollout
- Reduced senior developer attrition from near-total to a single departure

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Delivered core mobile flows across iOS and Android: digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Integrated CGM interface into hospital information system workflows
- Built stakeholder trust through transparent communication of technical complexity including legacy APIs and external database constraints

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Product Owner

- Owned quantum-secure encryption product end-to-end: backup, restore, checkpoint, and data-encryption architecture
- Served as deputy IT security officer; product required setup under two minutes with no technical knowledge from the end user
- Delivered English-language product promotion and market development

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder & CFO

- Built a group-based P2P payments product on a P2P backbone including PSP integration, full UX/UI design, and mobile app prototype
- Product was later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE (PROXY PRODUCT OWNER) 2019, 2020

- Led migration of internal webshop to Shopware including complex catalogue and API integration and customisable approval policies
