

Philipp Hilbert. *Product Owner who turns governance complexity into clear, shipped increments.*

Positioning, ten years of B2B SaaS product ownership, AI-native execution, and stakeholder alignment across regulated environments — exactly what modern board governance demands.

§ WHY BOARDWISE

Boardwise sits at the intersection of high-stakes governance workflows and the practical challenge of embedding AI into environments where trust and auditability are non-negotiable — that is a product problem I find genuinely interesting. The explicit focus on Microsoft-ecosystem AI integration (Copilot, LLM-based features within M365 and Azure) maps directly to the infrastructure-aware, AI-native way I already work. The posting names stakeholder management at board and management level as a core requirement, which aligns with the regulated, senior-audience delivery contexts I have operated in at Rohde & Schwarz and the Federal Employment Agency. *That is exactly the type of product environment where clarity of ownership and low-ego execution compound into real outcomes.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, edge-case generation, spec review
- **GPT**, research synthesis and stakeholder communication drafts
- **GitHub Copilot**, in-repo feature support and acceptance-criteria validation
- **Cursor / VSCode**, code-level product exploration and rapid prototyping
- **Lovable**, front-end prototype builds for early stakeholder alignment

- **Framer**, design-heavy mockups and user-flow visualisation
- **n8n**, agentic workflow automation and integration prototyping
- **Gamma.app**, structured presentation and roadmap communication

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin (Spring Boot), JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Argo Workflows, OpenShift, Docker, Jenkins, Dagster, dbt, DuckDB, MicroStrategy, AngularJS, Ionic, Redpanda, Bitbucket, Git, Shopware, low-code insurance platform tooling, CGM API integration, M365 / Office 365.

§ SIDE PROJECT

BACKTEST ENGINE & DEV-AGENT FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A personal infrastructure project building a crypto market backtest engine alongside a custom multi-agent developer framework.

- Implements file-queue-based agent loops for autonomous task routing across development subtasks.
- Architecture separates the orchestration layer from execution agents, allowing independent scaling of each.
- Integrates live and historical market data pipelines for strategy evaluation across multiple venues.
- Demonstrates the same agentic workflow design and LLM-assisted development patterns directly applicable to AI feature integration work at Boardwise.

§ HOW I WOULD WORK AT BOARDWISE

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Interview engineering leads, UX, and key stakeholders to map the current backlog state, understand where the Microsoft-ecosystem AI integration work stands, and identify the three highest-friction handoff points between business requirements and delivery.

WEEK 2

Sharpen and slice.

Rewrite the top backlog items with clear acceptance criteria and explicit AI-feature scoping, and run one structured refinement session to validate technical feasibility against the M365 and Azure constraints named in the posting.

WEEK 3+

Ship and close loops.

Own the first increment through to delivery, establish a lightweight stakeholder update rhythm at management level, and lock in a prioritisation cadence that keeps the AI feature roadmap visibly connected to governance outcomes.

I COVER LETTER

Dear Boardwise team,

Governance tooling sits at a specific product intersection: the workflows are high-stakes, the stakeholders are senior, the tolerance for ambiguity in requirements is low, and the pressure to show AI-driven value is high without sacrificing the auditability that boardrooms require. That combination is exactly the type of product problem I have spent the last several years working on in different forms.

At Rohde & Schwarz I owned an AI data management platform for the European FCAS defence programme, where data provenance, transparency, and reproducibility were contractual requirements, not optional features. I translated multinational stakeholder requirements into dev-ready user stories, delivered autonomous feature sets end-to-end through GitOps rollout, and led a cross-functional team of architects, data scientists, and frontend and backend engineers. The AI and auditability challenges there are structurally similar to what Boardwise faces: embedding intelligence into a high-trust environment where the outputs must be explainable.

At the Federal Employment Agency I owned backlog and delivery for a public-sector analytics platform, served as Deputy IT Security Officer, and managed a full migration to Kubernetes. That role required the same senior-stakeholder management discipline your posting names – presenting to ministry-level contacts, aligning compliance and data-governance requirements with engineering capacity, and keeping delivery moving despite shifting political priorities. At Emil Group I rebuilt delivery stability for a 17-person InsurTech team in a prototype-stage environment under significant client pressure, which required precisely the structured backlog ownership and transparent stakeholder communication your posting asks for.

On the Microsoft-ecosystem requirement: I have hands-on experience with Office 365 and M365 tooling from client delivery work, and my current AI-native workflow – which includes using LLMs for spec generation, edge-case analysis, and acceptance-criteria review alongside GitHub Copilot for in-repo work – translates directly into the Copilot and LLM-feature integration work you are driving. I also bring a working understanding of Azure-hosted infrastructure from adjacent project contexts.

I am based in Berlin, hold German as my native language and English at C2, and am available with four weeks' notice. I would welcome a conversation about how the product ownership role fits into Boardwise's current roadmap phase.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product Owner and Product Manager with nearly ten years of experience owning B2B SaaS backlogs in regulated, high-complexity environments. Has delivered AI data platforms, public-sector analytics products, InsurTech modules, and mobile healthcare apps from concept through production rollout. Experienced in senior and board-level stakeholder management, Microsoft-ecosystem delivery (M365, Office 365), and the full agile discipline of backlog ownership, sprint facilitation, and continuous value flow. Operates AI-native: LLM-assisted requirements engineering, rapid prototyping, and agentic workflow design are day-to-day practice, not aspirational additions.

§ CORE STRENGTHS

- Backlog ownership and structured prioritisation in Kanban and Scrum
- Translating board-level and management requirements into dev-ready user stories
- Senior and C-level stakeholder management across business, engineering, and compliance
- AI feature integration into production B2B SaaS products
- Microsoft-ecosystem delivery: M365, Office 365, Azure-adjacent infrastructure
- Cross-functional team leadership across engineering, UX, data, and QA
- Delivery stability recovery in prototype-stage and high-pressure environments
- Deputy IT Security Officer experience: compliance, governance, data lineage

- AI-native execution: LLM-assisted spec, GitHub Copilot, rapid front-end prototyping

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI Data Transformation

- Owned backlog for a central AI and data management platform (FCAS European defence programme), translating multinational stakeholder requirements into prioritised, dev-ready increments
- Delivered autonomous feature sets end-to-end: user stories, acceptance criteria, implementation support, testing, and GitOps-based rollout via ArgoCD
- Led cross-functional team of architect, data scientists, backend and frontend engineers, and QA
- Enabled ML training and evaluation on curated datasets with transparent audit trails, full data provenance, SafeAI and ExplainableAI concepts
- Reduced deployment times from several days to 20–40 minutes through GitOps introduction
- Unblocked an infrastructure-level OpenShift issue independently; delivered in one week a feature that had been blocked for over a year

FEDERAL EMPLOYMENT AGENCY (BUNDESAGENTUR FÜR ARBEIT) 2023, 2024

Product Manager, Public Data Analytics

- Owned product backlog and delivery for the Arbeitsmarktmonitor, a public-sector analytics platform for regional labour market and demographic data
- Managed senior stakeholder communication with ministry-level contacts; aligned compliance and governance requirements with engineering capacity
- Served as Deputy IT Security Officer with focus on compliance, governance, and data lineage
- Delivered new features including labour shortage analytics, flexible regional comparison, and modernised admin tooling
- Introduced Dagster for automated ETL and indicator generation; migrated legacy systems to Kubernetes; standardised CI/CD with full test integration

EMIL GROUP 2022, 2022

Product Manager, InsurTech SaaS Platform

- Owned backlog for a B2B InsurTech platform serving primary insurers, reinsurers, MGAs, brokers, and underwriters

- Re-established sprint discipline and delivery stability in a prototype-stage, high-pressure client environment
- Split a bloated 17-person team into smaller Scrum units; introduced ownership and deputy concepts, velocity tracking, and structured refinement
- Designed and delivered a Claims Center module from concept to production rollout
- Regained client trust through structured weekly product workshops and transparent stakeholder communication
- Delivered modules across product configuration, pricing, underwriting, policy issuance, document management, and workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Healthcare App

- Owned backlog and delivery for a mobile-first pilot app across iOS and Android for hospital clients
- Delivered core flows for digital anamnesis, meal and therapy plans, transport, chat, and patient document storage
- Communicated technical complexity (legacy APIs, external databases) transparently to stakeholders to maintain trust and set realistic delivery expectations
- Integrated CGM interface into hospital information system workflows

§ FOUNDER & EARLY-STAGE EXPERIENCE

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Owned product architecture for a quantum-secure encryption product based on one-time-pad keys and true random number generator hardware
- Designed the product for setup under two minutes with no technical knowledge required
- Served as deputy IT security officer; responsible for attack vector mitigation and security governance

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Founded a group-based P2P payments product built on a P2P backbone; owned full UX/UI design and mobile app prototype
- Managed PSP integration and payment flow design; product was later acquired and operated by Sparkasse

AOK HEALTH INSURANCE – ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of internal webshop to Shopware, including complex product catalogue and API integration and customisable approval policy workflows

BUNDESDRUCKEREI 2021, 2021

Product Owner, COVID-19 Data Platform

- Owned backlog for RKI projects DIM and DESH; responsible for secure data structures and identity management
