

Philipp Hilbert. *Technical Product Manager, AI Stockbroking.*

Positioning, 13 years shipping regulated financial products, from P2P payments to defence AI, now focused on building trustworthy AI-native stockbroking at scale.

§ WHY BJAk

Bjak is doing something structurally hard: running a regulated, money-moving superapp across payments, insurance, and trading in a region where financial infrastructure is uneven and user trust has to be earned from scratch. The detail that stands out is the explicit framing that reliability, regulatory requirements, and third-party financial rails are fundamental to the product, not edge cases. That matches exactly how I think about fintech: correctness first, then speed, never the other way around. The AI Stockbroking vertical specifically puts LLM product judgment at the centre of a high-consequence system, which is the problem space I find most interesting right now. *That is exactly the kind of product where shallow AI enthusiasm gets expensive fast, and careful evaluation design wins.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GitHub Copilot**, pair programming and test scaffolding
- **Cursor**, context-heavy codebase navigation
- **Lovable**, rapid front-end prototyping
- **GPT**, evaluation drafts and edge-case generation
- **n8n**, agentic workflow orchestration
- **Framer**, design-heavy interface work
- **Gamma.app**, stakeholder decks and narratives

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kubernetes, OpenShift, Docker, ArgoCD, GitOps rollout and rollback, Jenkins, CI/CD pipelines, GitLab, Azure DevOps, REST APIs, Python, Kotlin with Spring Boot, Django, PostgreSQL, MongoDB, Kafka, Dagster, dbt, ETL pipeline design, SQL funnel analysis, Jira, Confluence, Figma.

§ SIDE PROJECT

CONSTRUCT8 [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

Two-sided B2B staffing marketplace built solo, zero to one, with LLM agents across the full funnel.

- Anonymity-until-payment model protecting both sides of the marketplace until commitment is made.
 - WhatsApp and Telegram as the primary product surface, keeping acquisition and retention inside channels users already trust.
 - LLM agents automate day-to-day operations so a single operator runs the funnel end-to-end.
 - Demonstrates the same product instinct Bjak needs: build for the constraint (trust, thin margins, real money on the line) not the ideal environment.
-

§ HOW I WOULD WORK AT BJAК

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the trading and payments flows end to end, map the third-party rails and their failure modes, identify where correctness guarantees are implicit rather than enforced, and locate the regulatory approval gates that block the next launch.

WEEK 2

Slice and validate.

Take the highest-risk AI feature in the stockbroking vertical, define its evaluation framework, what a wrong answer looks like, what the human override path is, and validate the framing with engineering and compliance before anything ships.

WEEK 3 +

Ship, close loops.

Drive the first vertical increment to production: acceptance criteria signed off with compliance, reconciliation checks instrumented, and a post-launch review scheduled so the team sees outcome data within days, not sprints.

I COVER LETTER

Dear Bjak team,

I am applying for the Technical Product Manager, AI Stockbroking role. I have spent 13 years shipping regulated financial products, from a P2P payments product acquired into the girocard ecosystem to an AI and data platform for a European defence programme, and the thing that has stayed constant is the conviction that money-moving products have to be correct before they can be clever. Bjak's framing that reliability, regulatory requirements, and third-party financial rails are fundamental to the product, not considerations around the edges, is exactly the standard I hold myself to.

My most relevant direct preparation for this role sits at the intersection of fintech and AI evaluation. At Rohde & Schwarz I owned an internal AI and data platform for the FCAS programme: a cross-functional team of 15+ engineers and data scientists, GitOps delivery with ArgoCD, and a deliberate choice to instrument two competing design directions and kill the one that recorded zero actual usage. That discipline, measure the outcome, not the output, is the same discipline AI stockbroking features require, where a confident-sounding model answer that is subtly wrong is worse than no answer at all. I build evaluation loops before I build features.

On the regulated and payments side, I took Kvitt Payment Solutions from zero to acquisition by Sparkasse, operating inside the girocard ecosystem. I have shipped KYC and compliance workflows in insurance at EMIL Group, handled identity management for the Robert Koch Institute programmes at Bundesdruckerei, and worked through clinical data privacy requirements at CLINET Platforms. I understand that regulatory approvals are not bureaucratic overhead, they are launch gates, and the PM's job is to clear them in parallel with engineering, not in sequence. I have done that across insurance, health insurance, and public-sector analytics.

I am genuinely AI-native in practice, not in description. I use Claude Code and Copilot daily for in-repo work, I have built multi-agent orchestration workflows with n8n and file-queue-based loops, and I have prototyped front-end surfaces with Lovable and Framer fast enough to run real user tests before a sprint closes. More importantly, I know when AI should not be used: I would not put an LLM in control of a ledger entry without a deterministic guard and a human override path, and I can articulate that boundary clearly enough that engineering and compliance both trust the decision.

Bjak is expanding from insurance into stockbroking across Southeast Asia, a region where the infrastructure is real but the margin for error on user trust is thin. I want to be the PM who owns that vertical end to end, builds the evaluation and safeguard layer the AI features need to be trusted, and ships products where the user is never misled about the state of their funds. I move fast, I clear the gates that actually block launch, and I leave my ego at home. I would be glad to work through a practical assessment at your pace.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Senior product manager with 13 years of product ownership across fintech, regulated data platforms, insurance, and defence AI. I own verticals end to end, strategy, technical design, delivery, and launch, with a strong foundation in system architecture, APIs, failure modes, and distributed systems. I have shipped payment products inside regulated financial rails, built AI platforms with explicit evaluation frameworks and human-in-the-loop design, and navigated KYC, GDPR, and compliance workflows as a core product concern, not an afterthought. I am AI-native in daily practice and precise about where deterministic systems must remain in control.

§ WHAT I CAN DO

Regulated Fintech and Payments: fintech, payments, P2P payments, insurance, KYC, transaction monitoring, girocard, PSP integration, regulatory approvals, platform compliance.

AI Products and Tooling: AI, LLM (large language model) agents, agentic workflows, evaluation loops, human-in-the-loop design, prompt and context engineering, Explainable AI (XAI), AI governance, EU AI Act.

Product Management: Product Manager, product roadmap, continuous discovery, MVP definition, A/B testing, user research, prioritisation, go-to-market, product lifecycle management, OKRs (Objectives and Key Results).

Product Ownership: data-driven requirements engineering, user stories, acceptance criteria, backlog refinement, sprint planning, velocity tracking, Jira, Confluence, Figma.

Agile and Scaled Delivery: Scrum, Kanban, SAFe (Scaled Agile Framework), PI planning, agile release trains, CI/CD, GitOps, ArgoCD, branching strategy, release gating.

Technical Environments: Kubernetes, Docker, OpenShift, REST APIs, Python, Kotlin, PostgreSQL, MongoDB, Kafka, Dagster, dbt, ETL pipeline design, Jenkins, GitLab, Azure DevOps.

Analytics and Data: data platform ownership, funnel and churn analysis, KPI definition, ETL, Dagster, dbt, PostgreSQL, MicroStrategy, Matomo.

Governance: GDPR (DSGVO), Deputy IT Security Officer, identity management, budget ownership, ROI reasoning.

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI AND DATA PLATFORM 2024-2025

Led FCAS AI and data platform across 15+ engineers; GitOps rollout cut deployment from days to 30 minutes; workflow instrumentation drove a 200% pipeline-run increase by killing a zero-click UI in favour of developer-code-first design.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC-SECTOR ANALYTICS 2023-2024

National labour-market data platform; Deputy IT Security Officer; introduced Dagster and dbt, cutting data-update effort by 75%; migrated bare-metal to containers; shipped full UI relaunch and ETL migration concurrently.

CLINET PLATFORMS · PRODUCT OWNER · HEALTHCARE MOBILE APP 2023

Cut roadmap to top 10% of features against agreed success measures; user acceptance rose more than fivefold; integrated CGM hospital information system, reducing digital anamnesis from 30 minutes to 5.

EMIL GROUP · PRODUCT MANAGER · INSURANCE B2B SAAS PLATFORM 2022

Restructured 18-person delivery org into three lean teams; senior-engineer attrition fell from near-total exodus to one departure; shipped Claims Center from concept to production; cut insurance-product time-to-market from months to under one week.

SCHEIDT & BACHMANN · PRODUCT OWNER INTEGRATION · RETAIL AND PAYMENTS 2021-2022

POS and forecourt systems; moved research results into production inside a fully SAFe setup with agile release trains and PI planning.

BUNDESDRUCKEREI · PRODUCT OWNER (INTERIM) · GOVERNMENT SECURE
DATA 2021

Data structures and identity management for Robert Koch Institute programmes DIM and DESH.

AOK ITSCARE · PRODUCT OWNER (PROXY) · HEALTH INSURANCE
PROCUREMENT 2019-2020

Migrated legacy system to Shopware for three AOK insurers and ~20,000 employees; still in production.

WALDBURG-ZEIL KLINIKEN · PRODUCT OWNER · HEALTHCARE CLINICAL
NETWORK 2017-2018

Wifi infrastructure rollout across nine hospitals.

§ FOUNDER & EARLY-STAGE EXPERIENCE

CONSTRUCT8 · FOUNDER AND PRODUCT MANAGER · CONSTRUCTION
STAFFING MARKETPLACE 2025-2026

Zero-to-one two-sided B2B marketplace; anonymity-until-payment model; LLM agents across the funnel; funnel analysis in SQL.

QCRYPT AG · CO-FOUNDER AND PRODUCT OWNER · QUANTUM-SECURE
ENCRYPTION 2016-2021

Shipped a three-layer hardware and software product with sub-two-minute install; later Chair of the board.

KVITT PAYMENT SOLUTIONS · FOUNDER AND CFO · FINTECH P2P
PAYMENTS 2013-2018

Built mobile group-based P2P payments from zero to acquisition by Sparkasse, operating inside the girocard ecosystem.

§ LANGUAGES

German, native (C2). English, C2, business and technical fluency.
