

Philipp Hilbert. *Principal Product Manager, GCC Growth.*

Positioning, fintech PM with 13 years in regulated industries who ships working prototypes, not decks, and has already built a payments product taken to acquisition.

Dear Remitly Hiring Team,

Remitly's GCC growth charter sits at the intersection of the two things I find most technically interesting in product management: trust-dependent financial services for underserved communities, and the question of how far AI tooling can compress the distance between a customer insight and a shipped, validated feature. I have spent thirteen years at that intersection, most recently building the FCAS AI and data platform at Rohde & Schwarz and running product for a national labour-market analytics platform at the Federal Employment Agency, and I want to bring that experience to a consumer problem that genuinely matters.

The work I am most proud of is the kind the GCC role demands: deciding what to cut rather than what to add. At CLINET Platforms I inherited a roadmap a five-person team could not deliver. I reduced it to the top 10% of features against agreed success measures and user acceptance rose more than fivefold. At Rohde & Schwarz I instrumented two competing product strategies, a UI-led approach and a developer-code-first approach, and the UI-led one recorded exactly zero clicks in production. I redirected the strategy and pipeline runs increased 200%. Those are the kinds of data-informed decisions I would bring to acquisition, activation, and retention work across the Gulf.

On the builder dimension: I prototype my own ideas. My current side project, construct8, is a two-sided B2B marketplace I designed, built, and operate solo, using LLM agents across the qualification and routing funnel, with WhatsApp and Telegram as the product surface and funnel analytics in SQL. Earlier in my career I co-founded Kvitt Payment Solutions, a mobile P2P group payments product built inside the girocard ecosystem and eventually acquired and operated by Sparkasse. I understand KYC/AML constraints, payout-rail mechanics, and FX tradeoffs not as compliance overhead but as product design constraints that, handled well, become competitive moats. That is the fintech depth the posting asks for.

The GCC-specific context is one I am actively building. The Gulf's migrant and expatriate sender base, the customers Remitly is serving, faces a specific trust equation: speed and affordability matter, but so does payout reliability in the recipient country and confidence that money will arrive before a family payment is due. I have not shipped a product specifically for MENA users, and I would name that honestly as the one gap I am walking in with. What I bring instead is a track record of fast, structured customer discovery, I would treat the first weeks in this role as intensive listening, not strategy-presenting, and a method for turning qualitative empathy into quantitative experimentation that the data and engineering teams can act on.

I am based in Berlin, hold EU citizenship with no visa requirement, and am actively targeting the UAE: I am willing to relocate to Dubai or Abu Dhabi and work fully on-site if that is the right setup for this team. I would welcome the opportunity to talk about the GCC roadmap and what a first quarter of high-velocity experimentation could look like.

Best regards, *Philipp Hilbert*
