Dear Bybit Card Product team,

Bybit is building what very few companies have managed: a crypto-native payments stack that works at genuine consumer scale. The Bybit Card sits at the exact junction I find most interesting, where card network rules, real-time ledger mechanics, and crypto wallet UX have to resolve into something a user can tap at a checkout terminal without thinking twice. I want to own that problem.

My most directly relevant foundation is Kvitt Payment Solutions, a fintech P2P payments product I co-founded and took from zero to acquisition by Sparkasse inside the girocard ecosystem. That work forced me to understand payment processor integration, real-time settlement constraints, and the user-experience gap between how payments actually work and how people expect them to work. Building on top of a card network rather than around one is a new layer, and I treat it as that, a defined learning surface rather than a blocker.

Beyond payments, I bring the kind of crypto depth the role requires. I actively trade across CEX and DEX venues, including Hyperliquid, Bitget, Jupiter, and Across Protocol, and I study execution mechanics, perpetual futures, cross-chain bridging, DEX aggregation, slippage and routing, as infrastructure rather than speculation. I have spent eight years as a hands-on participant in digital asset markets, including time at the L2 layer with Polygon. That means I can translate the crypto-native side of the Bybit Card experience, wallet linking, stablecoin settlement, reward structures denominated in digital assets, without requiring a separate translation layer between product and the crypto reality the user lives in.

On the delivery side, I have led cross-functional teams of up to 15 engineers and data scientists through complex, regulated product cycles. At Rohde & Schwarz I owned an AI and data platform for a multinational defence programme; at Bundesagentur für Arbeit I ran a national analytics platform as deputy IT security officer while carrying a full infrastructure migration and UI relaunch in the same period. Both required exactly the skills the Bybit Card role describes: translating complex operational realities into prioritised roadmaps, driving go-to-market execution across internal and external stakeholders, and keeping the user journey legible while the underlying system is anything but simple.

I am based in Berlin, hold an EU passport, and am open to relocating to Dubai or working fully remote. My notice period is four weeks.

Best regards, *Philipp Hilbert*
