Dear BR-DGE Team,

Payment orchestration is one of the few product domains where a wrong prioritisation decision does not just slow growth, it directly costs merchants conversion at checkout. That accountability is what drew me to this role. I founded Kvitt Payment Solutions, a mobile P2P payments product that was acquired by Sparkasse and operated inside the girocard ecosystem. That experience gave me a ground-level understanding of PSP relationships, payment edge cases, and the merchant-facing complexity that sits beneath any clean API surface. BR-DGE's platform addresses that complexity at enterprise scale, and the inflection point you describe, scaling the team, deepening partnerships with Visa and Worldpay, entering new markets, is a moment I want to be part of.

Your posting specifically calls out vibe coding as a working practice, not a nice-to-have. I use prototyping tools daily: Lovable for front-end mockups I can put in front of a merchant persona or an internal stakeholder in the same afternoon, Claude Code for in-repo spec generation and edge-case analysis, and n8n for automating the repetitive parts of discovery synthesis. At construct8, my construction-staffing marketplace, I built and iterated the entire product surface solo using this stack, WhatsApp and Telegram as the product layer, LLM agents handling funnel steps, SQL for conversion analysis. The point is not that I can code; it is that I can move from a problem framing to something tangible fast enough that engineering can react to real signal rather than written requirements alone.

At Rohde & Schwarz I led the AI and data platform for the FCAS European defence programme, a 15-person cross-functional team, Scrum in Jira and Confluence, GitOps rollout with ArgoCD that cut deployment time from days to 30 minutes. At EMIL Group I shipped the Claims Center from concept to production for a B2B SaaS insurance platform and restructured an 18-person delivery organisation into three focused teams when it was losing engineers and client trust. Both experiences sharpened the same muscle BR-DGE needs: translating a complex technical platform into a roadmap that both a merchant CFO and a backend engineer can get behind.

Your "nice to have" includes iGaming background. I spent years as a semi-professional poker player and a hand reviewer on PokerStrategy.com, enough domain depth to understand the payment flows, the risk tolerances, and the user behaviours specific to that segment if BR-DGE is pursuing it.

The role you describe, strategic ownership of a core platform domain, close partnership with the VP of Product, and genuine influence over product direction in a high-growth FinTech, matches both where I am and where I want to go. I would welcome a conversation about which domain you have in mind and what the first 90 days look like.

Best regards, *Philipp Hilbert*
