Dear Hiring Team,

The role you have posted, Senior Product Manager for Financial Services and AI-Enabled Products, is the intersection I have been working toward. My thirteen years of product ownership span regulated environments that are structurally similar to enterprise banking software: public-sector analytics at the Federal Employment Agency, B2B insurance platforms at EMIL Group, a fintech payments product at Kvitt Payment Solutions taken from zero to acquisition inside the girocard ecosystem, and most recently a defence AI and data platform for the FCAS European programme. In each case, the hard part was not the backlog, it was translating regulatory obligations and operational constraints into scalable product decisions that engineering could actually deliver and that auditors and clients could actually accept.

The payments and financial infrastructure dimension of this role is one I can engage at a product-architecture level. At Kvitt Payment Solutions I owned the full P2P payment flow design, the PSP integration, and the edge-case handling that regulators and Sparkasse required before acquisition. At Scheidt & Bachmann I managed POS and forecourt payment integration in a SAFe organisation. I understand payment flows, transaction lifecycles, reconciliation, and the operational controls that sit around them, and I am honest that wholesale settlement infrastructure is territory I would be learning in this role rather than arriving with.

On the AI capability the posting names specifically: I apply AI practically rather than decoratively. At Rohde & Schwarz I redirected an entire platform strategy based on instrumented workflow analysis, the UI-led design recorded zero clicks, the developer-code-first path drove a 200% increase in pipeline runs. I use agentic workflows in n8n, write and review prompts and evaluation loops, and have shipped production systems where LLM agents run day-to-day operations autonomously. I know the difference between a useful copilot and an automation risk, and I am able to make that case credibly to compliance and executive stakeholders.

Stakeholder breadth is the other thing I want to address directly. The posting lists executive leadership, clients, engineering, compliance, and regulators as distinct audiences that need different things from the same product manager. I have navigated that simultaneously: at the Federal Employment Agency I was Deputy IT Security Officer while running an ETL migration and a full UI relaunch; at EMIL Group I restructured an 18-person delivery organisation to stop senior engineer attrition while simultaneously shipping the Claims Center from concept to production. The ability to hold the technical, regulatory, and business threads at the same time is where I am strongest.

Abu Dhabi and the UAE market are a genuine target for me, not a compromise. I am actively pursuing roles in the Gulf and am prepared to relocate on the standard notice period. I look forward to the opportunity to discuss how my background maps to the specific product area you are looking to staff.

Best regards, *Philipp Hilbert*
