Dear Redington Hiring Team,

I am writing to apply for the Senior Product Manager role on Redington's B2B marketplace platform. With ten years of product ownership across B2B SaaS, healthcare, insurance, and e-commerce platforms, I have spent the majority of my career doing exactly what this role demands: turning complex operational ecosystems into scalable, measurable digital products.

The scope of the platform, onboarding, catalog, pricing, checkout, order management, financing, and fulfilment, maps closely to work I have already done. At AOK ITSCare, I migrated a legacy procurement system to Shopware for three insurance organisations and roughly 20,000 end users, owning the full backlog, user stories, and acceptance criteria in Jira. At EMIL Group, I shipped the Claims Center from concept to production on an 18-person delivery team, and cut time-to-market for new insurance product launches from months to under a week. Both projects required exactly the kind of cross-functional alignment between Engineering, Operations, Sales, and business stakeholders that the Redington posting describes.

The PMM dimension of this role is one I take seriously. At Rohde & Schwarz, I redirected product strategy based on direct workflow instrumentation, a UI-led feature had recorded exactly zero clicks, while a developer-code-first path drove a 200% increase in pipeline runs, and then led the go-to-market narrative for the shift. Translating a technical capability into a partner adoption story for Redington's channel ecosystem is the same mechanic, at a different altitude.

On the data and analytics side: I have defined KPIs, built ETL pipelines with Dagster and dbt, and used funnel and churn analysis in SQL to inform prioritisation. Data-driven decisions are not a process I follow, they are how I know whether a decision was right.

I am actively targeting the UAE and am ready to relocate to Dubai on short notice. Redington's position at the centre of the technology distribution supply chain, and the opportunity to build a platform that compounds across hundreds of channel partners, is the kind of scope I have been looking for.

I would welcome the chance to discuss how my background fits the role in more detail.

Best regards, *Philipp Hilbert*
