

Philipp Hilbert. *Platform product manager for user engagement at scale.*

Positioning, ten years building platform products across fintech, healthcare, and defence, now focused on the engagement infrastructure that keeps 80 million users informed without burning them out.

§ WHY BYBIT

Bybit has built one of the few consumer crypto platforms that competes on trust rather than just liquidity, the 80-million-user base and 200-country footprint create exactly the kind of governance problem I find genuinely hard: how do you send the right message to the right user at the right moment when your audience spans dozens of regulatory regimes, dozens of languages, and the full spectrum from first-time buyer to active perpetuals trader? The posting's call for a centralized communication calendar and a cross-channel frequency control layer is the specific, unglamorous infrastructure work that determines whether a notification platform helps retention or destroys it. I have built the underlying mechanics, consent management, event-triggered pipelines, A/B testing frameworks, cross-team governance, across insurance SaaS, public-sector analytics, and fintech payments. *That combination of platform discipline and crypto-native context is not common, and it is exactly what this role needs.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GitHub Copilot**, day-to-day pair programming
- **Cursor / VSCode**, context-aware editing and debugging
- **Lovable**, rapid front-end prototyping

- **GPT**, research synthesis and edge-case generation
 - **Framer**, design-heavy wireframing
 - **n8n**, agentic workflow automation
 - **Gamma.app**, stakeholder presentation drafts
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kubernetes, ArgoCD, Helm, Docker, GitOps rollout and rollback, CI/CD with Jenkins and GitLab, Dagster, dbt, PostgreSQL, MongoDB, REST APIs, Python, Kotlin (Spring Boot), Django, SQL, Kafka, Jira, Confluence, Matomo, MicroStrategy, Figma, Miro.

§ SIDE PROJECT

CONSTRUCT8 [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Two-sided B2B marketplace for construction staffing, built zero-to-one solo.

- Anonymity-until-payment model that protects both firms and workers until commitment is confirmed.
 - WhatsApp and Telegram as the primary product surface, meeting users where they already operate.
 - LLM agents across the funnel so a single operator runs sourcing, matching, and follow-up day-to-day.
 - Proves end-to-end platform thinking relevant to Bybit's user engagement challenge: segmentation, lifecycle stage, consent, and channel choice all solved with one person and no external tooling budget.
-

§ HOW I WOULD WORK AT BYBIT

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the teams sending Push, Email, SMS, and In-App messages today, map every trigger, every approval step, and every gap in attribution, before touching a single priority or roadmap item.

WEEK 2

Audit, then slice.

Identify the three highest-friction points in the current governance flow, likely overlapping sends, missing consent signals, or no cross-channel frequency cap, and cut each to a scoped, shippable problem statement.

WEEK 3+

Ship, measure, close.

Land the first governance improvement with a measurement baseline attached, so iteration one has a real before/after and the engagement platform owns its own success criteria from day one.

I COVER LETTER

Dear Hiring Team at Bybit,

Notification platforms fail in a predictable way: they start as a convenience for one team, grow into a shared channel that every business unit treats as free, and end up as a channel users tune out or opt out of entirely. Fixing that requires more than a better send-time model, it requires a governance layer, a consent architecture, and a measurement framework that the whole organization trusts. That is the problem your posting describes, and it is the kind of platform product work I have spent the last several years doing.

At Rohde & Schwarz I owned an internal AI and data platform for the FCAS programme and led a cross-functional team of 15 engineers and data scientists. The hardest part was not the technical architecture, it was building a governance mechanism that prevented 15 teams from each optimising their own slice of the platform at the expense of the whole. I instrumented competing workflows, killed the beautiful UI that recorded zero production clicks, and redirected the roadmap based on what the data actually showed. That discipline, measure first, prioritise second, ship third, is what I would apply to Bybit's communication calendar and frequency control layer from day one.

At the Bundesagentur für Arbeit I owned a national labour-market analytics platform and served as Deputy IT Security Officer. That role required me to hold consent management, data governance, and delivery velocity in the same hand simultaneously, the same balance your posting calls for when it asks for someone who can coordinate across Engineering, Data, Compliance, and Operations without losing forward momentum. I integrated Dagster and dbt into the ETL pipeline, migrated a bare-metal system into containers, and ran a full UI relaunch inside the same delivery window, saving roughly 75% of the time per data update cycle.

My crypto and fintech context is not superficial. I co-founded Kvitt Payment Solutions, a mobile group-based P2P payments product that was acquired by Sparkasse and operated inside the girocard ecosystem. I have eight years of hands-on crypto experience across CEX and DEX venues, Hyperliquid, Jupiter, 1inch, Across Protocol, including perpetual futures, DEX aggregation, and cross-chain bridging. I understand how Bybit's users think about money, trust, and notification fatigue in ways that a PM without crypto exposure simply cannot replicate from a job description. I am also building my own backtesting engine and trading bot infrastructure, which gives me direct intuition for the kind of event-triggered, data-driven decision logic your engagement platform needs to support.

The AI-powered personalization capabilities in your roadmap, optimal send-time prediction, intelligent segmentation, personalized content generation, are areas where I have moved from experimentation to production. I use Claude Code, GitHub Copilot, Cursor, and n8n daily, not as productivity novelties but as delivery infrastructure. I can sit with your data scientists and your engineers and have a substantive conversation about how to instrument, evaluate, and govern an AI-powered messaging layer rather than just signing off on someone else's proposal.

I would welcome the chance to discuss how my platform governance experience and crypto-native context translate into immediate value for the notification control roadmap.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Product manager with 13 years of ownership across platform products in fintech, defence AI, public-sector analytics, insurance, and healthcare. I have built governance layers, consent architectures, data pipelines, and cross-team prioritisation frameworks in regulated, high-stakes environments. At Bybit I would own the communication governance platform end-to-end: channel orchestration, user preference management, frequency control, and the measurement framework that closes the loop on every send.

§ WHAT I CAN DO

Platform and Engagement Governance: cross-channel frequency control, communication calendar management, consent management, user preference management, workflow management, permission and approval mechanisms, prioritisation frameworks, rules engines

Data and Analytics: A/B testing, user segmentation, cross-channel attribution, funnel and churn analysis, KPI definition, ETL (extract, transform, load), Dagster, dbt, PostgreSQL, Matomo, MicroStrategy

AI Products and Tooling: LLM agents, agentic workflows, prompt and context engineering, human-in-the-loop design, AI governance, EU AI Act, Explainable AI (XAI); Claude Code, GitHub Copilot, Cursor, Lovable

Product Management: continuous discovery, product vision and roadmap, MVP definition, A/B testing, user research and interviews, prototyping, product lifecycle management, go-to-market support, prioritisation

Product Ownership: requirements engineering, user stories, acceptance criteria, backlog refinement, sprint planning, velocity and burndown, UAT, Jira, Confluence, Figma, Miro

Agile and Scaled Delivery: Scrum, Kanban, SAFe, ART, PI planning, GitOps rollout with ArgoCD, CI/CD, containerised environments

Fintech, Crypto, Web3: P2P payments, CEX/DEX mechanics, perpetual futures, AMMs, cross-chain bridging, girocard ecosystem, stablecoin and custody infrastructure, DeFi platform mechanics

Technical Environments: Kubernetes, Docker, REST APIs, Python, PostgreSQL, MongoDB, Kafka, Jenkins, GitLab, Azure DevOps

Stakeholder and Leadership: cross-functional team leadership up to 15 engineers, C-level reporting, workshop facilitation, conflict resolution, change management, GDPR, Deputy IT Security Officer

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ · PRODUCT MANAGER · DEFENCE AI AND DATA PLATFORM 2024-2025

Led 15+ engineers and data scientists on the internal AI and data platform for the FCAS European programme; GitOps delivery with ArgoCD cut rollout time from days to 30 minutes, and workflow instrumentation redirected roadmap priority to increase pipeline runs 200%.

BUNDESAGENTUR FÜR ARBEIT · PRODUCT MANAGER · PUBLIC-SECTOR ANALYTICS 2023-2024

Owned national labour-market analytics platform; integrated Dagster and dbt to save 75% of time per data update, migrated bare-metal to containers, ran full UI relaunch and ETL migration concurrently; served as Deputy IT Security Officer.

CLINET PLATFORMS · PRODUCT OWNER · HEALTHCARE MOBILE APP 2023

Cut an undeliverable roadmap to the top 10% of features against agreed success measures, user acceptance rose more than fivefold; shipped CGM hospital information system interface reducing anamnesis time from 30 minutes to 5.

EMIL GROUP · PRODUCT MANAGER · INSURANCE B2B SAAS 2022

Restructured an 18-person delivery organisation into three lean teams; attrition fell from near-total exodus to one departure; shipped the Claims Center from concept to production and cut time-to-market for new insurance products from months to under a week.

SCHEIDT & BACHMANN · PRODUCT OWNER INTEGRATION · RETAIL AND PAYMENTS POS 2021-2022

Moved research results into production across a matrix organisation in a fully SAFe setup with agile release trains and PI planning; domain: e-commerce and payments, forecourt POS systems.

BUNDESDRUCKEREI · PRODUCT OWNER (INTERIM) · SECURE GOVERNMENT DATA 2021

Data structures and identity management for the Robert Koch Institute DIM and DESH programmes.

AOK ITSCARE · PRODUCT OWNER (PROXY) · HEALTH INSURANCE E-COMMERCE 2019-2020

Migrated legacy procurement system to Shopware for three AOK insurers and roughly 20,000 employees; still in production; backlog refinement and user stories in Jira.

ENERCON · PROJECT LEAD · WIND ENERGY IT 2019

Full site IT modernisation end to end.

WALDBURG-ZEIL KLINIKEN · PRODUCT OWNER · CLINICAL NETWORK 2017-2018

Wifi infrastructure rollout across nine hospitals.

§ FOUNDER & EARLY-STAGE EXPERIENCE

CONSTRUCT8 · FOUNDER AND PRODUCT MANAGER · CONSTRUCTION STAFFING MARKETPLACE 2025-PRESENT

Zero-to-one two-sided B2B marketplace; anonymity-until-payment model, WhatsApp and Telegram as product surface, LLM agents across the funnel; funnel and conversion analysis in SQL.

QCRYPT AG · CO-FOUNDER AND PRODUCT OWNER · QUANTUM-SECURE
ENCRYPTION 2016-2021

Shipped a three-layer hardware-software product installing in under two minutes for enterprise buyers; later Chair of the board; domain: IT security, data encryption.

SMART SOIL TECHNOLOGIES · CO-FOUNDER, CDO AND CFO ·
NANOTECHNOLOGY 2018-2021

Took a fertiliser product from laboratory to investor rounds; owned financial planning and investor reporting.

KVITT PAYMENT SOLUTIONS · FOUNDER AND CFO · FINTECH P2P
PAYMENTS 2013-2018

Built group-based mobile P2P payments from zero to acquisition by Sparkasse; operated inside the girocard ecosystem.
