

Philipp Hilbert. *Senior Product Manager, identity and trust infrastructure.*

Positioning, fintech founder turned platform PM: I have shipped from zero-to-one, led cross-functional teams of 15+, and rebuilt broken delivery organisations.

Dear Clera team,

Identity and trust infrastructure is a product category where the consequences of a wrong decision propagate silently for months before they surface as customer churn or regulatory friction. That is precisely why it attracts me. I have spent the last five years as a product manager in environments where getting the foundations right was not optional: a national labour-market analytics platform at the Bundesagentur für Arbeit where I was also deputy IT security officer, a B2B SaaS platform for insurers and reinsurers at EMIL Group, and a defence AI data platform for the FCAS European programme at Rohde & Schwarz. Across all three I owned the roadmap end-to-end, worked directly with engineering on architecture trade-offs, and held accountability for both delivery velocity and long-term product quality.

The posting asks for someone who can reason about how individual features interact within a larger product ecosystem and anticipate second-order effects. I recognise that language because it describes the failure mode I have spent the most time correcting. At Rohde & Schwarz I instrumented two competing workflows, one UI-led, one developer-code-first, and the elegant UI one recorded exactly zero clicks. Redirecting strategy based on that finding increased pipeline runs by 200% and avoided months of wasted engineering. At CLINET Platforms I inherited a roadmap a five-person team could not deliver, cut it to the top 10% of features against agreed success measures, and watched user acceptance rise more than fivefold. Scope discipline and systems thinking are the same skill.

Beyond employed roles, I have direct fintech and payments experience as a founder. Kvitt Payment Solutions, a mobile group-based P2P payments product I built from zero, was acquired and is operated inside the girocard ecosystem by Sparkasse. I understand B2B platform dynamics from the identity layer upward: at Bundesdruckerei I worked on data structures and identity management for Robert Koch Institute programmes, and at Qcrypt AG I co-founded and owned the product architecture for quantum-secure encryption targeting enterprise buyers. That combination, fintech founder, identity and security domain, B2B platform PM, maps closely onto what Clera is building.

I work fully remote, am based in Berlin, and operate entirely within EU timezones. I communicate in writing the way this posting describes: decisions documented, assumptions explicit, reasoning transparent, so distributed teams stay aligned without synchronous overhead. I would be glad to talk about what the next twelve months of the roadmap look like and what you think the hardest product problem is right now.

Best regards, *Philipp Hilbert*
