Dear Hiring Team,

I am applying for the Product Owner, Patient Pathway role at Psychiatry UK. My background spans 13 years of product ownership in regulated industries, healthcare, insurance, public-sector analytics, and defence, and I have spent much of that time in exactly the position this role describes: holding clinical or operational complexity in one hand and commercial accountability in the other while a cross-functional team needs clear direction.

The work I am most proud of at CLINET Platforms illustrates why this role appeals to me. A five-person team was carrying a roadmap it could not realistically deliver. I cut it to the top ten percent of features against agreed success measures, implemented the CompuGroup Medical interface into hospital information system workflows, and reduced the digital anamnesis process from 30 minutes to five from form to database. That is the kind of outcome I want to replicate: fewer things, done properly, measured against patient impact rather than feature count. Psychiatry UK's fully remote care model means the patient pathway is the entire product surface, there is no clinic building to absorb friction, and that makes rigorous backlog prioritisation and data-driven decision-making more consequential, not less.

At the Bundesagentur für Arbeit I owned a national labour-market analytics platform as its Deputy IT Security Officer, introduced Dagster and dbt to eliminate manual data processing, and cut the time per quarterly data update by 75%. That project taught me how to translate messy, politically sensitive requirements into clean data pipelines and then hold stakeholders to KPI definitions they had pre-agreed, skills that transfer directly to monitoring pathway performance metrics and communicating trade-offs to clinical, operational, and commercial audiences at Psychiatry UK.

My commercial instincts were shaped early. I co-founded Kvitt Payment Solutions, built it to acquisition by Sparkasse inside the girocard ecosystem, and co-founded Qcrypt AG as its Product Owner, where I shipped a quantum-secure encryption product that installs in under two minutes because enterprise buyers would not accept longer. Revenue sustainability and operational scalability have never been abstract concerns for me; they are the conditions under which a product earns the right to keep existing.

I am a remote-first operator, comfortable with async collaboration across clinical, technical, and commercial stakeholders, and I hold a strong belief that user stories and acceptance criteria are a communication contract, not a documentation exercise. I would welcome the chance to talk through how my background maps onto Psychiatry UK's immediate pathway challenges.

Best regards, *Philipp Hilbert*
