

Philipp Hilbert. *Delivery experience leader with a decade of end-to-end product ownership.*

Positioning, ten years owning product roadmaps from discovery to rollout, now applying that discipline to Amazon's MENA delivery experience.

Dear Amazon DEX MENAT Hiring Team,

The delivery experience problem in MENA is structurally harder than in mature markets: address data is fragmented, customer expectations vary sharply between Gulf and Levant markets, and the last-mile infrastructure is still being built in real time. That operational complexity is exactly the kind of environment where rigorous product thinking, treating each roadmap bet as a falsifiable hypothesis, generates disproportionate value. It is why this role caught my attention immediately.

Over the past decade I have owned product roadmaps across regulated, operationally complex environments: a national health data platform at Bundesdruckerei (RKI), a public-sector labour-market analytics platform at Bundesagentur für Arbeit, a defence AI training pipeline at Rohde & Schwarz, and currently a zero-to-one B2B marketplace at construct8. In each case the mandate was similar to what you describe, business strategy, product execution, and operational excellence rolled into one accountability. At Rohde & Schwarz I drove a deployment rollout from days to thirty minutes by reframing the product's architecture from UI-heavy to developer-friendly, a decision I reached by working directly with the engineering team and the end users simultaneously. At EMIL Group I restructured a seventeen-person monolithic team into three nimble squads with clear leads, because the team structure was the bottleneck, not the backlog.

The financial rigour the job description calls for, quickly assessing the viability of key decisions, influencing senior leadership through data, is how I have operated throughout. Before building anything at Bundesagentur für Arbeit I co-authored the migration business case and had the success metric agreed in writing before the first sprint. At Scheidt & Bachmann I worked inside a SAFe release-train structure, aligning PI planning across payment, POS, and forecourt workstreams, which demanded exactly the cross-functional stakeholder discipline Amazon operates at.

My experience is strongest in European B2B SaaS and public-sector platforms; I am transparent that direct MENA market or P&L ownership experience is not on my record. What I bring instead is a track record of entering operationally complex, cross-functional environments, understanding the customer problem faster than the organisation expects, and shipping measurable improvements with small, focused teams. I am also actively targeting the UAE for relocation and view this posting as a long-term commitment, not a geographic experiment.

I would welcome the opportunity to discuss how this background maps to the specific execution challenges on the MENA DEX roadmap.

Best regards, *Philipp Hilbert*
