

Philipp Hilbert. *AI Deployment Lead, applied at scale.*

Positioning, 13 years shipping AI and data products in defence, public sector, insurance, and fintech, now ready to do the same for Brain Co.'s regulated-institution clients in the Gulf.

Dear Brain Co. Hiring Team,

I am writing to apply for the AI Deployment Lead role based in Abu Dhabi and Doha. I have spent 13 years at the intersection of AI product delivery and institutional customers, defence, public sector, insurance, healthcare, payments, and I am now looking for the role where those years convert into the largest possible impact. Brain Co.'s mission to rebuild how institutions work, and your current phase of national-scale production deployments, is exactly that place.

The job description maps closely to what I have actually done. At Rohde & Schwarz I owned the AI and data platform for the FCAS European defence programme: I led a cross-functional team of 15 engineers and data scientists, managed agile sprints end to end, and championed the GitOps rollout that cut deployment time from days to 30 minutes. At EMIL Group I inherited a delivery organisation that was losing senior engineers and client trust simultaneously. I restructured it into three lean teams, stopped the attrition, and shipped the Claims Center from concept to production with no prior template. At Bundesagentur für Arbeit I was Deputy IT Security Officer while simultaneously driving a full infrastructure migration from bare-metal to containerised environments and rebuilding the ETL pipeline around Dagster and dbt. These are not adjacent experiences, they are the core of what the role asks for.

What I bring that is harder to list in a job description is the ability to stay in the room with a senior government or financial-services stakeholder and make the technical picture legible without dumbing it down. I have done that in German and English, in ministries and in commercial insurance, and I have done it when the news was bad. Trust with enterprise customers is earned slowly and lost instantly; I treat it accordingly.

On the technical side, I am fluent across the AI/ML stack that Brain Co. deploys: model deployment workflows, agentic pipelines, human-in-the-loop design, and the governance considerations that regulated buyers, government, finance, energy, bring to every conversation. I also understand the infrastructure underneath: Kubernetes, ArgoCD, CI/CD, containerised environments. I do not need the engineering team to translate for me, which means I can serve as a genuine bridge rather than a relay station.

Abu Dhabi and Doha are locations I am actively targeting. I am prepared to relocate and to travel regionally as the role requires. I am available at short notice and would welcome the chance to speak with your team.

Best regards, *Philipp Hilbert*
