

Philipp Hilbert. *Outcome-first Product Owner for AI-augmented delivery teams.*

Positioning, 10-year PM with backlog-to-production ownership, AI-native tooling, and a payments founder background ready to drive Corpay's Corporate Payments delivery.

§ WHY CORPAY

Corpay is building the infrastructure layer that makes commercial payments work at scale, fuel, payables, toll, lodging, across 80 countries and millions of business users. The job description makes it explicit that this team is actively building with AI-assisted code generation and an evolving AI-driven SDLC, not just evaluating whether to start. That specificity matters: it signals a team that has already moved past the pilot phase and needs a PO who can think in both product intent and execution mechanics at the same time. My background includes building a mobile payments platform from zero, owning PSP integration and settlement flows, and running backlog delivery in regulated, cross-functional environments. *That is exactly the intersection where my payments domain and AI-native delivery habits become immediately useful.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo implementation and spec generation
- **GPT**, user story drafting and acceptance criteria refinement
- **Cursor / VSCode**, AI-assisted development environment
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy interface iteration

- **Gamma.app**, stakeholder communication and documentation
 - **n8n**, multi-agent orchestration and workflow automation
 - **GitHub Copilot**, inline code assistance and review
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin, JavaScript, PostgreSQL, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Docker, GitOps, OpenShift, Dagster, dbt, Kafka, Argo Workflows, Terraform, Jenkins, iOS and Android mobile integration, Shopware, SAFe PI planning tooling.

§ SIDE PROJECT

JOB APPLICATION AGENT [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

A multi-agent framework that automates structured job application workflows end-to-end.

- Coordinates a queue-based pipeline of coordinator, implementer and evaluator agents under guardrails designed for repeatable, auditable output.
 - Built on a shared file-queue architecture with role separation between planning, execution and validation agents.
 - Replaces a workflow that previously required a four-person team; operates part-time with one human in the loop.
 - Demonstrates the same AI-assisted SDLC mechanics Corpay's team is actively building toward.
-

§ HOW I WOULD WORK AT CORPAY

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the Scrum team and key business partners, read existing backlog items and acceptance criteria, and identify where intent translation breaks down between business goals and what engineers actually receive.

WEEK 2

Sharpen the backlog.

Run the first mob session, tighten the top ten backlog items to clear outcome-driven criteria, and establish a shared definition of what "ready" and "done" mean for this team's delivery cadence.

WEEK 3+

Ship and close loops.

Own the first release readiness check, track delivered stories against defined success measures, and feed findings back into refinement, closing the loop between what was intended and what was shipped.

I COVER LETTER

Dear Hiring Team,

I am applying for the Product Owner role in Corpay's Corporate Payments division. Commercial payments infrastructure is a domain I know from the inside: I co-founded Kvitt Payment Solutions, a mobile payments platform built from zero with full PSP integration, settlement flows, and consumer onboarding, which was subsequently acquired and operated by Sparkasse. That experience taught me the difference between payments as a product decision and payments as an engineering exercise, and why confusing the two is expensive.

What drew me specifically to this posting is the sentence about "actively building with AI-assisted code generation." That is not aspirational language for me, it is how I have worked for the past two years. I run a multi-agent framework in which coordinator, implementer and evaluator agents work a shared queue under guardrails I designed. With AI development tooling and a human in the loop I now deliver the output a four-person team produced full-time a year ago: requirements, interface design, frontend and backend, automated regression, architecture and operations. My usefulness in a PO role is not that I can write the code, it is that I understand the full value chain well enough to structure backlog items so that AI-assisted generation actually works rather than producing technically correct but intent-misaligned output.

My record on backlog ownership and team alignment is concrete. At EMIL Group I inherited a 17-person delivery organisation that had stalled and was losing its senior engineers. I restructured it into teams that could own something end to end, restored velocity, rebuilt client trust, and stopped what had been an almost complete talent exodus. At Rohde & Schwarz I owned full product delivery for a module of the FCAS AI backbone, from discovery through backlog, release definition, and rollout, in a multinational team spanning architects, data scientists, engineers and QA, and reduced deployment times from several days to under 40 minutes by resolving an infrastructure blocker engineering had not cracked in over a year. At

Scheidt & Bachmann I operated as PO in a fully SAFe organisation, running PI planning, release train coordination and cross-team dependency management for payment and forecourt systems in a complex matrix structure. That breadth, startup founder, enterprise delivery, defence programme, regulated data platform, is not accidental. It reflects an approach to product work where the skill being developed is pattern recognition across delivery environments, not just depth in one.

The qualities your description calls out, facilitation of mob sessions, comfort with ambiguity, backlog discipline, AI tooling in a professional context, are not areas I am building toward. They are the way I work now, and I can demonstrate each with named projects and measurable outcomes.

I would welcome the opportunity to talk through how my background maps to the specific delivery problems your Corporate Payments team is working on.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Philipp Hilbert is a product owner and product manager with 10 years of experience driving backlog-to-production delivery across B2B SaaS, regulated data platforms, defence programmes and payment infrastructure. He is known for translating ambiguous business intent into structured, outcome-driven work, for rebuilding team alignment in stalled delivery organisations, and for operating as an AI-native practitioner across the full software value chain. His payments background includes co-founding a mobile payments platform acquired by Sparkasse, and his AI working mode, multi-agent orchestration, AI-assisted story refinement, AI-assisted code generation, is a current daily practice, not a roadmap item.

§ CORE STRENGTHS

- Outcome-driven backlog ownership and continuous refinement
- Facilitation of mob sessions and cross-functional requirements alignment
- AI-assisted story clarity, acceptance criteria generation, and delivery efficiency
- Payment platform product design: PSP integration, settlement flows, consumer onboarding
- Stakeholder alignment across business, engineering, QA, compliance, and data science

- Restructuring stalled delivery organisations and restoring team velocity
 - SAFe PI planning, release train coordination, cross-team dependency management
 - Risk-first discovery: resolving the largest uncertainty first with the cheapest instrument
 - Full value chain fluency: discovery, requirements, test automation, delivery, and operations
-

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 2025, PRESENT

Product Manager, B2B Marketplace for the Construction Industry

- Owns product vision, strategy and discovery for a two-sided B2B marketplace matching construction firms with workers, removing the headhunter as middleman
- Designed AI-assisted vetting and interview workflows enabling one person to run the full day-to-day operation
- Optimised user journeys across three distinct sides: contractors, workers and internal operations staff
- Shipped messaging integration into WhatsApp and Telegram, the channels the user base actually operates in

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI and Data Platform (FCAS defence programme)

- Owned a module of the central AI backbone for a European defence programme, from discovery through backlog, release definition and rollout
- Reduced deployment times from several days to 20, 40 minutes; resolved an infrastructure blocker engineering had not solved in over a year
- Delivered reproducible ML training pipelines with complete provenance and audit trails for safety-critical use
- Steered a multinational team spanning architects, data scientists, engineers and QA

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Data and Analytics Platform

- Owned backlog and delivery for a national analytics platform on a warehouse-grade ETL stack, used by policy makers and researchers across Germany
- Introduced automated ETL orchestration and standardised CI/CD, reducing manual pipeline intervention
- Served as deputy IT security officer: compliance, governance and data lineage under a recurring audit cycle

EMIL GROUP 2022

Product Manager, B2B SaaS Platform

- Restructured a 17-person delivery organisation into effective teams; restored velocity, client trust, and stopped a near-complete senior engineer exodus
- Built a claims module from zero with no prior specification, running discovery directly with a pilot customer's claim specialists
- Instrumented the claim flow so that churn per process step became the leading prioritisation metric
- Delivered modules across product configuration, pricing, underwriting, policy issuance and document workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Application (iOS and Android)

- Shipped a hospital application across two platforms for multiple distinct user groups
- Implemented the interface into the incumbent clinical system landscape directly
- Cut an overambitious roadmap to the most important ten percent of features, recovering delivery focus

BUNDESDRUCKEREI 2021

Product Owner, National Health Data Platform

- Owned backlog and requirements for secure data structures and identity management under the highest national privacy requirements, supporting pandemic monitoring programmes

SCHEIDT & BACHMANN 2020, 2021

Product Owner, Integration Team (Fuel and Convenience Retail)

- PO of the integration team, turning research outcomes into releasable integration across point-of-sale, payment and forecourt systems
- Ran PI planning, release train coordination and cross-team dependency management in a fully SAFe organisation
- Managed cross-geography, cross-discipline matrix stakeholders through release cycles

AOK ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of an internal procurement platform serving roughly 20,000 employees across three regional health insurers
- Managed catalogue and API integration into legacy systems and approval workflow configuration per organisational unit

ENERCON 2019

Project Lead, IT Modernisation

- Delivered full IT modernisation of a manufacturing site in the wind energy sector, covering hardware, servers, switches and communication lines
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built a mobile payments platform from zero: PSP integration, settlement flows, consumer onboarding, full payment user experience
- Acquired and operated by Sparkasse
- As CFO owned accounting, financial planning and investor reporting across the full operating period

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Co-owned product architecture for quantum-secure encryption across a three-layer hardware and software stack, shipped to enterprise customers under a sub-two-minute installation constraint
- Delivered the full product as PO, including backup, restore and checkpoint architecture

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO and CFO

- Took a nanotechnology product from laboratory stage through investor rounds
 - Owned finance, HR and the ERP rollout across the full lifecycle
-
