

Philipp Hilbert. *Payments infrastructure product owner with a decade of delivery and eight years of hands-on crypto.*

Positioning, ten years shipping regulated fintech products and eight years inside crypto markets, from CEX/DEX trading to on-ramp mechanics, ready to own Utorg's full execution cascade.

§ WHY UTORG

Utorg sits at a layer I find genuinely interesting: the infrastructure that makes crypto usable for people who are not crypto-native, stablecoins, on/off-ramps, custody, and card spend, all under MiCA and PCI DSS constraints that most teams underestimate. The job description names a specific discipline, cascade the product map into clear, well-scoped initiatives and make sure the right things ship on time, which is exactly the execution role I have held across fintech, insurance, and defence, in organisations where regulatory constraint was not a footnote but a first-class product requirement. The call-out for "solid understanding of crypto: wallets, on/off-ramps, cards, trading" as a must is where I differ from most PM candidates who come from fintech alone. *That combination of regulated-product discipline and genuine crypto fluency is not common, and it is what I bring.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo spec and edge-case generation
- **GPT**, requirements drafting and user-story refinement
- **Lovable**, rapid front-end prototyping

- **Framer**, interface design and clickthrough validation
 - **Gamma.app**, stakeholder and exec reporting
 - **n8n**, multi-agent workflow orchestration
 - **GitHub Copilot**, code review and implementation oversight
 - **Cursor / VSCode**, codebase navigation and light scripting
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, PostgreSQL, Kotlin, MongoDB, REST APIs, Kubernetes, ArgoCD, Helm, Dagster, dbt, DuckDB, Kafka, OpenShift, Jenkins, Docker, GitOps pipelines, Argo Workflows, Terraform, across production systems in defence, national government data platforms, and B2B SaaS.

§ SIDE PROJECT

CRYPTO BACKTEST ENGINE [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

A personal backtesting and trading-bot framework built to validate execution strategies across centralised and decentralised venues.

- Ingests tick and OHLCV data from CEX APIs and on-chain sources, normalises to a common schema, and runs strategy simulations with realistic slippage and fee models.
 - Built around a file-queue-based multi-agent loop: coordinator, implementer, and evaluator agents operate under guardrails I designed, reflecting the same AI-first execution model I apply professionally.
 - Covers perpetual futures, spot, and DEX aggregation mechanics, with attention to price impact, routing, and liquidation dynamics informed by Coinglass and Hyblock Capital analytics.
 - Directly relevant to Utorg's on/off-ramp and stablecoin rails: understanding execution quality, slippage, and market microstructure at this depth is what allows a PM to write acceptance criteria that hold up in production.
-

§ HOW I WOULD WORK AT UTORG

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the existing roadmap cadence, read every initiative brief in the backlog, map where strategy intent breaks down into ambiguous or untested scope, and identify which teams are blocked on cross-functional alignment, starting with the compliance and engineering boundary, which is where payment product decisions stall most often.

WEEK 2

Slice and sharpen.

Take the two or three initiatives with the highest delivery risk, break them into the smallest independently shippable slices, draft acceptance criteria against real user flows and regulatory edge cases, and pressure-test the scope with engineering and legal before anything is committed.

WEEK 3+

Ship and close loops.

Establish a weekly rhythm of progress reporting to execs with explicit trade-off framing, track delivery against commitments, surface blockers the day they appear rather than the day they are due, and instrument each shipped feature so the team can answer within two weeks whether it moved the metric it was built for.

I COVER LETTER

Utorg's job description names a concrete execution gap: a product owner who can hold the full context from strategic intent to shipped feature, keep cross-functional teams aligned, and make commitments land. That is not a generic PM role; it is a specific discipline that only works when the person holding it genuinely understands the product domain, not just the delivery mechanics. I want to explain why I am a precise fit for both.

On the product domain: I have eight years of hands-on experience in crypto markets, which I can speak to in operational terms. I actively trade spot and perpetual futures across Hyperliquid, Bitget, Jupiter, and Bitfinex. I use DEX aggregation via 1inch, bridge assets across chains via Across Protocol, and manage custody across self-custodial and institutional wallets. I study execution quality, slippage, price impact, liquidation dynamics, routing, using Coinglass and Hyblock Capital analytics. I have also built a backtesting and trading-bot framework from scratch, designed around the same AI-native multi-agent architecture I use in my professional product work. That background means I can read a user flow for an on/off-ramp or a crypto card and immediately see the edge cases, the regulatory pinch points, and the UX decisions that will hurt retention, without needing to be educated on the domain first.

On regulated-product delivery: at Rohde & Schwarz I owned an AI data platform module inside a European defence programme, where safety-critical data provenance, full audit trails, and multinational compliance constraints were not optional. At Bundesagentur für Arbeit I acted as deputy IT security officer while owning a national analytics platform under a recurring audit cycle. At Bundesdruckerei I owned identity management and secure data structures for pandemic monitoring under the highest privacy requirements. These environments taught me that compliance and shipping speed are only in tension if you treat them as separate concerns. The solution is to build regulatory requirements into acceptance criteria before refinement, not after, which is a habit rather than a process.

On cross-functional execution: at EMIL Group I inherited a 17-person delivery organisation that had stalled and was losing its senior engineers. I restructured the teams, restored velocity, and rebuilt client trust, with one departure instead of the near-complete exodus that had been underway. The lever was not process; it was context. Teams that understand the why behind an initiative make better local decisions and push back on weak scope earlier. I bring the business problem and the evidence into refinement, and I stay in the room when engineering and design are working through it, rather than handing off a requirements document.

Utorq is building the rails that will make self-custodial, stablecoin-native finance usable at scale across 130+ countries, under MiCA authorisation and PCI DSS Level 2 constraints. That is exactly the kind of infrastructure problem I want to own: technically complex, regulatory-constrained, and consequential for the people who depend on it. I would be glad to walk through any of the above in a conversation at your convenience.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Philipp Hilbert is a product owner and product manager with ten-plus years of experience shipping regulated software across fintech, defence, national government, and B2B SaaS. He combines execution discipline, backlog ownership, cross-functional alignment, requirements engineering, and delivery tracking, with genuine crypto fluency built over eight years of hands-on participation in CEX and DEX markets, on/off-ramp mechanics, perpetual futures, bridging, and self-custodial wallet management. He operates as an AI-native practitioner: using multi-agent frameworks, rapid prototyping tools, and LLM-assisted spec generation to compress the distance between discovery and shipped feature. He is at his best in environments where

regulatory constraint is a first-class product requirement and where the cost of shipping the wrong thing is high enough to take discovery seriously.

§ CORE STRENGTHS

- Cascade from strategy to shippable scope without losing the why
 - Crypto domain fluency: wallets, on/off-ramps, cards, perpetuals, DEX mechanics
 - Cross-functional alignment across engineering, design, legal, and compliance
 - Requirements engineering and acceptance criteria under regulatory constraint
 - AI-native execution: multi-agent frameworks, rapid prototyping, LLM-assisted spec
 - Risk-first discovery: resolve largest uncertainty first, with cheapest instrument
 - Backlog discipline: ruthless prioritisation, scope challenge, delivery tracking
 - Data-informed decisions: instrumentation, ETL fluency, BI and SQL literacy
 - Stakeholder communication: clear written requirements, structured exec reporting
-

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 2025, PRESENT

Product Manager, B2B Marketplace for the Construction Industry

- Defined product vision, strategy, and principles for a zero-to-one two-sided B2B marketplace; running continuous discovery across contractors, workers, and operations staff
- Designed full AI-assisted user journey covering interview, vetting, and day-to-day operations, enabling a single person to run the business end to end
- Addressed a difficult messaging reality, users live in WhatsApp and Telegram, and shaped the product around the channels rather than against them

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI and Data Platform (FCAS defence programme)

- Owned a module of the central AI backbone for a European defence programme: full lifecycle from discovery through requirements, backlog, release definition, and production rollout
- Reduced deployment times from several days to 20, 40 minutes; resolved an infrastructure blocker engineering had not cracked in over a year
- Delivered reproducible pipelines with complete data provenance and audit trails for safety-critical machine learning training and evaluation
- Steered a multinational team of architects, data scientists, engineers, and QA across Kubernetes, OpenShift, GitOps, Kotlin, Python, PostgreSQL, and Kafka

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Data and Analytics Platform

- Owned national analytics platform on a warehouse-grade ETL stack used by policy makers and researchers across Germany
- Introduced automated ETL orchestration and standardised CI/CD; reduced manual intervention in release cycles
- Acted as deputy IT security officer: compliance, governance, and data lineage under a recurring audit cycle

EMIL GROUP 2022

Product Manager, B2B SaaS Platform

- Delivered modules across product configuration, pricing, underwriting, policy issuance, and document workflow automation for a B2B insurance platform
- Built a claims module from zero with no specification and no internal precedent, running discovery directly with a pilot customer's claims specialists
- Restructured a 17-person delivery organisation into effective teams; restored velocity, rebuilt client trust, and stopped an almost complete senior-engineer exodus at a single departure
- Instrumented the claim flow so that churn per process step became the leading prioritisation metric

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Application (iOS and Android)

- Shipped a hospital application across two platforms for multiple distinct user groups; implemented the interface into the incumbent clinical system landscape personally
- Cut an overambitious roadmap to the most impactful ten percent of features, unblocking delivery

BUNDESDRUCKEREI 2021

Product Owner, National Health Data Platform

- Owned secure data structures and identity management for national pandemic monitoring programmes under the highest privacy and compliance requirements

SCHEIDT & BACHMANN 2020, 2021

Product Owner, Integration Team (Fuel and Convenience Retail)

- Product Owner of the integration team downstream of research: translating research outcomes into productive, releasable integration across point-of-sale, payment, and forecourt systems

- Managed backlog in a fully SAFe organisation: PI planning, release train coordination, and cross-team dependency management across a complex multinational matrix

AOK ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of an internal procurement platform serving approximately 20,000 employees across three regional health insurers, including catalogue and API integration into legacy systems
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built a mobile payments platform from zero: PSP integration, settlement flows, user onboarding, and full end-to-end user experience; acquired and operated by Sparkasse
- As CFO, owned accounting, financial planning, and investor reporting

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Co-founded and owned product architecture for a quantum-secure encryption product across a three-layer hardware and software stack, shipped to enterprise customers under a sub-two-minute installation constraint
- Promoted the product publicly in English to enterprise audiences

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO and CFO

- Took a nanotechnology product from laboratory stage through investor rounds; owned finance, HR, and ERP rollout
-
