

Philipp Hilbert. *Crypto-native product owner who ships.*

Positioning, ten years of fintech and B2B SaaS product ownership, now applied to wallets, on/off-ramps, and digital-asset infrastructure at the intersection of payments and compliance.

§ WHY JOBGETHER'S PARTNER COMPANY

The role sits exactly at the intersection I have been building toward: crypto infrastructure, payments, and compliance-constrained product delivery in a fully remote, agile environment. The explicit call for deep understanding of wallets, on/off-ramps, crypto cards, and trading is not a stretch requirement for me, it describes the domain I have spent eight years in as an active participant, analyst, and builder. The detail about serving as the central point of reference for scope, priorities, and key decisions across engineering, design, legal, and marketing maps precisely to how I have operated at Rohde & Schwarz and EMIL Group. *That is exactly the kind of ownership structure where my cross-functional range compounds.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude**, requirements drafting, edge-case generation, spec review
- **Claude Code**, in-repo refactors and backlog automation
- **GPT**, research synthesis and stakeholder communication drafts
- **Cursor / VSCode**, working alongside engineering in the codebase
- **Lovable**, rapid front-end prototyping for discovery validation
- **Framer**, design-heavy wireframes and clickthrough mockups
- **n8n**, multi-agent and agentic workflow orchestration
- **Gamma.app**, structured stakeholder and executive update decks

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, PostgreSQL, Kotlin, Kubernetes, ArgoCD, Helm, OpenShift, Docker, Dagster, dbt, Kafka, REST APIs, GitOps, CI/CD pipelines, MongoDB, JavaScript; working familiarity with DuckDB, Terraform, and Argo Workflows from hands-on platform and data engineering ownership.

§ SIDE PROJECT

CRYPTO BACKTESTING AND TRADING INFRASTRUCTURE [GITHUB.COM/HILBERTP](https://github.com/HilbertP) →

Personal framework for algorithmic strategy research and live execution across centralized and decentralized venues.

- Backtesting engine for crypto markets with support for perpetual futures, spot, and DEX-sourced liquidity data.
 - Multi-agent coordinator-implementer-evaluator architecture running shared task queues under guardrails I designed.
 - Active integration with Hyperliquid, Bitget, Jupiter, 1inch, and Across Protocol; liquidation heatmap analysis via Coinglass and Hyblock Capital.
 - Directly relevant to on/off-ramp product ownership: the framework builds firsthand understanding of execution quality, slippage, routing, and the infrastructure layer that makes crypto payments function at scale.
-

§ HOW I WOULD WORK AT THE COMPANY

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow each cross-functional team, engineering, compliance, design, to map the current backlog state, identify where requirements are ambiguous or acceptance criteria are missing, and locate the three blockers most likely to delay the next release.

WEEK 2

Slice and sharpen.

Take the highest-priority initiative, challenge its scope against user and business impact, rewrite the epics into shippable slices with clear acceptance criteria, and close the first alignment loop with engineering and legal on edge cases.

WEEK 3+

Ship and instrument.

Drive the first delivery to done-done: validated against the original problem, measured against a pre-agreed success metric, and documented as a reference template for how scope and requirements work on this team.

I COVER LETTER

Dear hiring team,

I am applying for the Product Owner role because it matches both my professional background and my genuine domain investment. I have spent ten years owning product delivery in complex, regulated, technically demanding environments, B2B SaaS, national data platforms, defence AI infrastructure, and payments, and I have spent eight years as an active crypto user and builder. The combination of those two things is precisely what this role asks for.

On the product execution side: my track record is in exactly the situations this role describes. At EMIL Group I built a claims module from zero with no specification and no internal precedent, running discovery directly with a pilot customer's specialists, and simultaneously restructured a 17-person delivery organisation that had stalled. Velocity returned, client trust returned, and an almost complete senior exodus stopped at a single departure. At Rohde & Schwarz I owned full delivery of an AI data platform module for a European defence programme, requirements, backlog, release definition, rollout, and cut deployment times from several days to under forty minutes by resolving an infrastructure blocker engineering had not cracked in over a year. At Scheidt & Bachmann I was Product Owner for a payment and point-of-sale integration team in a fully SAFe organisation, managing cross-team dependencies and PI planning across geographies. Writing clear requirements, challenging scope, unblocking execution, and giving structured updates to executives are habits, not aspirations.

On the crypto side: my engagement goes well beyond user familiarity. I actively trade and manage assets across centralized and decentralized venues including Hyperliquid, Bitget, Jupiter, 1inch, and Across Protocol, using perpetual futures, spot, DEX aggregation, and cross-chain bridging. I work with liquidation heatmaps and analytics platforms such as Coinglass and Hyblock Capital, and I analyze execution concepts including slippage, price impact, routing, and

market microstructure. I have built a personal backtesting engine for crypto markets and a multi-agent framework for algorithmic strategy research and live execution. I co-founded Kvitt Payment Solutions, a mobile payments platform built from zero through PSP integration, settlement flows, and full user experience, later acquired and operated by Sparkasse. I understand wallets, on/off-ramps, and the infrastructure layer that makes crypto payments function at scale from the inside, not from a product brief.

What I bring to the cross-functional demands of this role: I keep engineering and legal and design in the same room from the start, because requirements written without those perspectives collapse at the edge cases. I define what would count as success before we build, and I instrument the product so the answer can be observed rather than debated. I have operated as the central point of reference for scope, priorities, and key decisions in every role I have held, and I am comfortable holding unemotional conversations with stakeholders whose priorities I need to challenge or re-sequence.

I would welcome the opportunity to speak in more detail about how my background maps to your specific product challenges.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Ten years of product ownership across fintech, B2B SaaS, regulated data platforms, and defence AI infrastructure, combined with eight years of hands-on crypto engagement spanning trading, infrastructure analysis, and personal tool development. I translate high-level strategy into shippable slices, maintain backlog discipline under ambiguity, and align engineering, design, compliance, and business functions around measurable outcomes. I have rebuilt stalled delivery organisations, owned zero-to-one product builds with no specification, and driven execution from discovery through production rollout in safety-critical and compliance-constrained environments.

§ CORE STRENGTHS

- Backlog ownership and scope challenge under regulatory and business constraints
- Zero-to-one product builds: discovery through delivery with no internal precedent
- Cross-functional alignment across engineering, design, legal, compliance, and business

- Crypto and payments domain depth: wallets, on/off-ramps, DEX, perpetuals, PSP integration
 - Requirements engineering: user flows, acceptance criteria, edge-case analysis
 - Stakeholder communication: structured executive updates, risk escalation, decision documentation
 - Delivery execution: timeline tracking, blocker identification, release ownership
 - Data-informed prioritisation: instrumented products, measurable success criteria
 - AI-native tooling applied to product and requirements work
-

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 2025, PRESENT

Product Manager, B2B Marketplace for the Construction Industry

- Owned full product vision, strategy, and discovery for a zero-to-one two-sided B2B marketplace
- Designed user journeys across three sides: contractors, workers, and internal operations
- Applied AI tooling end-to-end, from interview through vetting and selection, to keep internal operations viable at minimal headcount

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI and Data Platform (FCAS defence programme)

- Full ownership from discovery to production: requirements, backlog, release definition, rollout for a module of the central AI backbone of a European defence programme
- Reduced deployment times from several days to 20, 40 minutes; resolved an infrastructure blocker engineering had not solved in over a year
- Delivered reproducible pipelines with complete provenance and audit trails for safety-critical machine learning use
- Steered a multinational team of architects, data scientists, engineers, and QA across geographies

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Data and Analytics Platform

- Owned a national analytics platform on a warehouse-grade ETL stack used by policy makers and researchers across Germany
- Introduced automated ETL orchestration and standardised CI/CD, reducing manual release risk

- Served as deputy IT security officer: compliance, governance, and data lineage under a recurring audit cycle

EMIL GROUP 2022, 2022

Product Manager, B2B SaaS Platform

- Built a claims module from zero with no specification and no internal precedent, running discovery directly with a pilot customer's claim specialists
- Restructured a 17-person delivery organisation into effective, outcome-owning teams; restored velocity and client trust; stopped an almost complete senior exodus
- Instrumented the claim flow so that churn per process step became the leading prioritisation metric
- Delivered modules across product configuration, pricing, underwriting, policy issuance, and document workflow automation

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Application (iOS and Android)

- Shipped a hospital application across two platforms for several distinct user groups
- Implemented the interface into the incumbent clinical system landscape directly
- Cut an overambitious roadmap to the highest-value ten percent of features and held the line

BUNDESDRUCKEREI 2021, 2021

Product Owner, National Health Data Platform

- Owned secure data structures and identity management for national pandemic monitoring programmes under the highest privacy and regulatory requirements

SCHEIDT & BACHMANN 2020, 2021

Product Owner, Integration Team, Fuel and Convenience Retail

- Product Owner of the integration team turning research outcomes into releasable point-of-sale, payment, and forecourt system integration
- Backlog ownership in a fully SAFe organisation: PI planning, release train coordination, cross-team dependency management
- Operated across a complex matrix organisation spanning geographies and disciplines

AOK ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of an internal procurement platform serving roughly 20,000 employees across three regional health insurers

- Managed catalogue and API integration into legacy systems and approval workflows per organisational unit
-

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built a mobile payments platform from zero: PSP integration, settlement flows, onboarding, full user experience
- Platform acquired and operated by Sparkasse
- As CFO: owned accounting, financial planning, and investor reporting

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Shipped quantum-secure encryption across a three-layer hardware and software architecture to enterprise customers under a sub-two-minute installation constraint
- Owned backup, restore/checkpoint, and data-encryption product architecture

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO and CFO

- Took a nanotechnology product from laboratory to investor rounds
 - Owned finance, HR, and the ERP rollout
-
