
Philipp Hilbert. *AI-native product leader bridging enterprise delivery and intelligent systems.*

Positioning, ten years delivering complex B2B digital products, now applying that rigour to AI-powered experiences for enterprise and government clients.

§ WHY HALIAN / THIS ORGANISATION

The role sits at an intersection I have been working toward deliberately: enterprise and government clients, AI-native tooling, and the expectation that the product manager owns the full arc from ambiguous problem to shipped experience. The posting's emphasis on bridging business, technology, and user needs while driving measurable outcomes matches the pattern of every role I have taken since 2020. The explicit call for experience with LLMs, AI agents, automation, and RAG architectures is not a list of aspirations for me, it is a description of my current working week. *That is the kind of brief where I produce the most useful work, and where the gap between what the team expects and what I deliver tends to be the largest.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo specification, refactoring, and agentic task delegation
- **GPT**, requirement synthesis, edge-case generation, and stakeholder document drafting
- **Cursor / VSCode**, AI-assisted exploration of unfamiliar codebases
- **Lovable**, rapid frontend prototyping without a designer in the room
- **Framer**, design-heavy interface mockups and interactive prototypes
- **Gamma.app**, client-facing decks and workshop materials assembled in minutes

- **n8n**, multi-agent workflow orchestration and automation pipelines
 - **GitHub Copilot**, inline code review and implementation acceleration
-

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Kubernetes, OpenShift, ArgoCD, Helm, GitOps, Docker, Kafka, Dagster, dbt, DuckDB, PostgreSQL, MongoDB, Python, Kotlin, JavaScript, REST APIs, Argo Workflows, Terraform, Jenkins, CI/CD pipeline design, ETL orchestration, and data provenance tooling in safety-critical environments.

§ HOW I WOULD WORK AT THIS ORGANISATION

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Attend every client-facing session as an observer, map the current product definition workflow end to end, and identify where the largest uncertainty lives, whether that is in requirements, technical feasibility, or stakeholder alignment on what AI should actually do.

WEEK 2

Prototype, validate early.

Pick the single highest-uncertainty assumption and run the cheapest instrument that can settle it, a click-through mockup, a working Lovable prototype, or a structured client workshop, before any engineering commitment is made.

WEEK 3+

Ship, close loops.

Own the first PRD for an AI-enabled feature, instrument it for measurable outcomes from day one, and establish the feedback loop between client input and backlog priority that keeps the team building the right thing rather than the specified thing.

I COVER LETTER

Dear Hiring Team,

The brief you have written describes something I have been building toward across my last four roles: owning AI-enabled digital products for enterprise and government clients, from the first ambiguous conversation through to a measured outcome. That is not a trajectory I adopted recently because the market moved in that direction. It is the thread that runs from the Bundesagentur für Arbeit analytics platform through Rohde & Schwarz's AI data backbone for a European defence programme, and into the multi-agent development framework I run today.

At Rohde & Schwarz I owned a module of the central AI pipeline for the FCAS programme, multimodal data ingestion, provenance and audit trails, and reproducible ML training datasets. I reduced deployment times from several days to under forty minutes by resolving an infrastructure blocker engineering had not closed in over a year, and I did it by understanding the Kubernetes and GitOps stack well enough to find the constraint rather than defer to specialists. That technical depth is what separates a product manager who can evaluate AI feasibility from one who must accept whatever the engineering team reports. Your posting asks for exactly that judgment, and I have exercised it in production environments where the cost of getting it wrong was not a missed sprint but a failed audit.

Client-facing work is the other dimension your posting weights heavily. I have led workshops with government procurement officers, presented roadmaps to executive steering committees inside a German federal agency, and rebuilt client trust at EMIL Group after inheriting a delivery organisation that had stalled. Rebuilding trust with enterprise clients is not a communication skill, it is a product skill. It requires showing people a concrete next step, a small bet that resolves something real, before you ask them to commit to a larger plan. I treat every stakeholder conversation as discovery: what does the client actually believe the product should do, and how does that differ from what we are building?

The AI-native working mode your organisation describes is not an aspiration I am growing into. I currently run a coordinator-implementer-evaluator agent framework with a shared task queue, where I produce requirements, interface prototypes, backend logic, automated tests, and deployment configuration in the time a small team needed a year ago. I use Claude Code, Lovable, n8n, and Framer daily. That compression of the product delivery cycle is what allows a senior product manager to operate at the pace your clients expect from an innovation-focused organisation. It is also what allows me to evaluate AI capabilities and limitations honestly, I have watched these systems fail in production and I know where the guardrails need to go.

I would welcome the opportunity to discuss how this experience maps to the specific products and clients your organisation is building for. I am willing to relocate to Abu Dhabi and available at short notice.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Philipp Hilbert is a product manager with ten years of experience delivering complex B2B and government digital products across defence, public sector, insurance, and payments. His current focus is AI-enabled product development: he runs a multi-agent framework in production, builds with frontier models daily, and has owned AI data pipelines in safety-critical environments. He brings technical depth in data infrastructure, MLOps tooling, and cloud-native deployment alongside a structured approach to discovery, stakeholder alignment, and measurable outcomes.

§ CORE STRENGTHS

- AI product definition: agents, LLMs, RAG architectures, and automation pipelines
 - Enterprise and government stakeholder management, including executive presentation
 - Full product lifecycle ownership from discovery through production rollout
 - Technical fluency across cloud-native infrastructure, ETL, and ML tooling
 - Multi-agent framework design and agentic workflow orchestration
 - Workshop facilitation and client trust rebuilding in high-ambiguity environments
 - Rapid prototyping with Lovable, Framer, and AI-assisted front-end tooling
 - Risk-first discovery: resolving the largest uncertainty with the cheapest instrument
 - Cross-functional leadership across engineering, design, QA, and data science
-

§ PROFESSIONAL EXPERIENCE

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI and Data Platform, FCAS European Defence Programme

- Owned the full lifecycle of an AI data backbone module: requirements, backlog, release definition, and production rollout on Kubernetes and OpenShift
- Designed reproducible pipelines with complete data provenance and audit trails for safety-critical ML training and evaluation datasets
- Reduced deployment times from several days to 20, 40 minutes by resolving an infrastructure blocker that engineering had not closed in over a year

- Steered a multinational team of architects, data scientists, engineers, and QA across geographies and disciplines

CONSTRUCT8 2025, PRESENT

Product Manager, B2B Marketplace for the Construction Industry

- Owned vision, strategy, and discovery for a zero-to-one two-sided marketplace matching construction firms with workers
- Designed AI-assisted workflows covering interview, selection, and vetting to allow a single operator to run the full day-to-day business
- Mapped user journeys across three distinct sides: contractors, workers, and internal operations staff

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Data and Analytics Platform

- Delivered automated ETL orchestration and standardised CI/CD for a national analytics platform used by policy makers and researchers across Germany
- Served as deputy IT security officer: compliance, data lineage, and governance under a recurring audit cycle
- Stack: Python, PostgreSQL, Dagster, dbt, Kubernetes

EMIL GROUP 2022, 2022

Product Manager, B2B SaaS Platform

- Delivered modules across product configuration, pricing, underwriting, policy issuance, and document workflow automation for an insurtech platform
- Built a claims module from zero, no specification, no internal precedent, running discovery directly with a pilot customer's claims specialists
- Restructured a 17-person delivery organisation into effective teams; restored velocity, client trust, and stopped an exodus of senior engineers
- Instrumented the claim flow so that churn per process step became the leading prioritisation metric

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Application (iOS and Android)

- Shipped a hospital application across two platforms for several distinct user groups
- Implemented the interface into the incumbent clinical system landscape directly, without delegating the integration work
- Cut an overambitious roadmap to the most important ten percent of features to hit a delivery deadline

BUNDESDRUCKEREI 2021, 2021

Product Owner, National Health Data Platform

- Owned secure data structures and identity management for national pandemic monitoring programmes under the highest privacy and compliance requirements

SCHEIDT & BACHMANN 2020, 2021

Product Owner, Integration Team, Fuel and Convenience Retail

- Turned research outcomes into releasable integrations across point-of-sale, payment, and forecourt systems in a fully SAFe organisation
- Owned backlog in a PI planning and release-train cadence, managing cross-team dependencies across geographies

AOK ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of an internal procurement platform serving roughly 20,000 employees across three regional health insurers, with catalogue and API integration into legacy systems and per-unit approval workflows

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built a mobile payments platform from zero: PSP integration, settlement flows, onboarding, and full user experience; acquired and operated by Sparkasse
- As CFO owned accounting, financial planning, and investor reporting across the full lifecycle

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Shipped quantum-secure encryption across a three-layer hardware and software architecture to enterprise customers under a sub-two-minute installation constraint
- Owned backup, restore/checkpoint, and data-encryption product architecture end to end

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO and CFO

- Took a nanotechnology product from laboratory to investor rounds; owned finance, HR, and the ERP rollout
