Dear Hiring Team at Halian,

I am applying for the Product Owner role based in Abu Dhabi. I have spent more than ten years owning product backlogs across regulated, complex and customer-facing digital environments, insurance SaaS, national health data platforms, clinical mobile applications and AI-data pipelines for defence, and the brief in this posting describes the core challenge I am brought in to solve: turning ambiguous business needs into well-prioritised, releasable increments, while keeping engineering, design, QA and stakeholders moving in the same direction.

The regulated-industry preference in the posting is a direct match. At CLINET Platforms I shipped a hospital application across iOS and Android for multiple distinct clinical user groups and integrated it myself into the incumbent clinical system landscape. At Bundesdruckerei I owned the product for a national pandemic health data platform under the highest privacy and compliance requirements Germany operates. At EMIL Group I delivered across product configuration, pricing, underwriting, policy issuance and document workflow automation for insurers, reinsurers and brokers, and I built the claims module from zero with no specification, running discovery directly with a pilot customer's claim specialists. These are not adjacent experiences; they are the domain.

At EMIL I also inherited a 17-person delivery organisation that had stalled and was losing its senior engineers. I restructured it into teams with genuine end-to-end ownership. Velocity returned, client trust returned, and what had been an almost complete exodus stopped at a single departure. I mention this because the role asks for strong stakeholder engagement and cross-functional collaboration, and the hardest version of that problem is not a difficult meeting,

it is a team that has stopped believing that good work changes outcomes. Repairing that is a leadership task, not a process task.

On tools: I work daily in Jira for backlog and sprint management, Miro for workflow mapping and refinement workshops, and Figma for collaborative design review with product and UX. I use AI tools, Claude, GPT, Lovable, Framer, not as novelties but as force multipliers that compress the time between a business requirement and a validated prototype.

Abu Dhabi is an explicit target location for me, not a compromise. I am prepared to relocate and to work fully on-site, and I am available within four weeks of an offer.

Best regards, *Philipp Hilbert*
