

Philipp Hilbert. *AI-native Product Manager for enterprise SaaS.*

Positioning, ten years shipping B2B SaaS products end-to-end, from regulated insurance platforms to defence-grade AI data pipelines, now bringing that breadth to HR tech.

§ WHY MÉTIER

métier operates in a domain where complexity is structural: strategic HR decisions touch compliance, data sensitivity, and multi-stakeholder trust simultaneously. The posting calls out RAG pipelines, vector databases, and LLM orchestration as advantages, which maps precisely to the infrastructure work I have been doing at the AI layer for the past two years. The expectation that the PM can challenge technical decisions constructively, not just collect requirements, is the working mode I default to. *That is exactly the environment where my strengths compound.*

§ AI-NATIVE STACK

Daily tools, not buzzwords.

- **Claude Code**, in-repo refactors and spec generation
- **GPT**, research, edge-case enumeration, draft PRDs
- **Cursor / VSCode**, AI-assisted development and review
- **Lovable**, rapid front-end prototyping
- **Framer**, design-heavy interface iteration
- **n8n**, multi-agent workflow orchestration
- **GitHub Copilot**, inline code assistance and test generation
- **Gamma.app**, stakeholder communication and discovery decks

§ TECHNICAL ENVIRONMENT

Shipped with, not just listed.

Python, Kotlin, PostgreSQL, MongoDB, REST APIs, Kubernetes, OpenShift, ArgoCD, Helm, Terraform, Docker, GitOps, Dagster, dbt, DuckDB, Kafka, Argo Workflows, Jenkins, AWS-compatible cloud infrastructure, microservices architectures, ETL orchestration pipelines, RAG pipeline concepts, and LLM API integration across Claude and GPT.

§ SIDE PROJECT

MULTI-AGENT DEV FRAMEWORK [GITHUB.COM/HILBERTP](https://github.com/hilbertp) →

A coordinator, implementer, evaluator agent loop running over a shared file queue, with guardrails I designed and own.

- Implements a three-role agent topology: coordinator decomposes tasks, implementer executes, evaluator gates output before merge.
 - Architecture uses a file-queue-based shared state model so agents remain stateless and individually replaceable.
 - Supports automated regression and end-to-end test generation as a first-class output, not an afterthought.
 - Directly relevant for a GenAI SaaS PM role: I have designed and operated the kind of agentic orchestration the engineering team will build into the product.
-

§ HOW I WOULD WORK AT MÉTIER

First weeks, concrete.

WEEK 1

Listen, map, find the gaps.

Shadow the claim and underwriting workflow sessions the job description references, map the current AI feature surface against the stated roadmap, and identify where model accuracy, latency, and cost trade-offs are being made implicitly rather than measured.

WEEK 2

Instrument, then prioritise.

Define the leading metrics for the two or three most contested product areas, so that the next sprint backlog is sorted by evidence rather than stakeholder volume.

WEEK 3+

Ship, close loops.

Deliver the first PRD that passes the engineering architecture review without a second round-trip, and instrument post-release model behaviour so the team has a data signal within days of rollout rather than weeks.

I COVER LETTER

Dear hiring team at métier,

Strategic HR is one of the few SaaS categories where data sensitivity, regulatory exposure, and genuine business-criticality collide inside a single product. That combination is exactly where the product discipline I have built over the past decade applies most directly. I have shipped B2B SaaS platforms for insurers, reinsurers and brokers at EMIL Group, run a national analytics platform at Bundesagentur für Arbeit under recurring audit cycles, and owned the AI data backbone module for a European defence programme at Rohde & Schwarz. Across all three, the constant was translating ambiguous, high-stakes requirements into working software under tight compliance constraints.

The posting specifically highlights RAG pipelines, vector databases, and LLM orchestration as differentiating experience. At Rohde & Schwarz I owned end-to-end delivery of reproducible ML training pipelines with full data provenance and audit trails, reducing deployment times from several days to under forty minutes and unblocking an infrastructure problem the engineering team had not resolved in over a year. I worked directly with data scientists and architects to make trade-off decisions on pipeline design, not as a relay for stakeholder requests but as a participant in the technical conversation. That is the working mode your posting describes, and it is the one I default to.

At EMIL Group I built a claims module from zero, with no specification and no internal precedent. I ran discovery directly with a pilot customer's claims specialists, instrumented the claim flow so that churn per process step became the leading prioritisation metric, and restructured a seventeen-person delivery organisation that had stalled. Velocity recovered, senior engineers stopped leaving, and client trust returned. The parallel to an HR SaaS product is direct: the domain expert user base, the compliance overlay, and the need to earn engineering alignment rather than assume it are structurally identical.

My AI-native working mode changes the economics of product work. Using Claude Code, GPT, Lovable, and a multi-agent framework I built and operate myself, I routinely deliver output that previously required a four-person team. For a GenAI SaaS PM role, this matters in two ways: I can prototype and validate faster than a team waiting on engineering cycles, and I understand from the inside what it actually costs to build, deploy, and monitor an LLM-backed feature,

which makes the accuracy-latency-cost trade-offs in the posting something I navigate from experience rather than theory.

I am available at four weeks' notice and happy to discuss the scope, team structure, and roadmap in detail.

Best regards, *Philipp Hilbert*

II CURRICULUM VITAE

§ BEARING

Philipp Hilbert is a product manager with ten years of experience shipping B2B SaaS platforms in regulated, compliance-heavy environments, including insurance, federal public sector, and safety-critical defence. He has owned AI and data platform products end-to-end, run discovery with enterprise customers under audit constraints, and restructured delivery organisations that had stalled. His current working mode is AI-native: he builds and operates a multi-agent framework, prototypes with LLM tooling daily, and treats the full software value chain, from discovery through GitOps rollout, as product work rather than someone else's concern.

§ CORE STRENGTHS

- End-to-end SaaS product ownership in regulated enterprise environments
- AI/ML pipeline product design with provenance, audit trails, and compliance requirements
- LLM orchestration and agentic workflow design from the product and infrastructure side
- Cross-functional alignment across engineering, data science, architecture, QA, and compliance
- Claims, underwriting, and insurance workflow domain knowledge from production delivery
- Continuous discovery practice: outcome framing, instrumentation, and metric-led prioritisation
- PRD and acceptance criteria authorship that survives architecture review without a second round-trip
- Delivery organisation restructuring and team velocity recovery
- Technical fluency sufficient to challenge engineering decisions and evaluate build-vs-buy trade-offs

§ PROFESSIONAL EXPERIENCE

CONSTRUCT8 2025, PRESENT

Product Manager, B2B Marketplace for the Construction Industry

- Designed end-to-end product strategy and discovery process for a two-sided B2B marketplace, zero to one
- Full AI-assisted pipeline from user interviews through selection and operational workflow automation
- Optimised user journeys across three distinct user groups: contractors, workers, and internal operations

ROHDE & SCHWARZ 2024, 2025

Product Manager, AI and Data Platform (FCAS defence programme)

- Owned a module of the central AI backbone for a European defence programme: requirements, backlog, release definition, rollout
- Designed reproducible ML training pipelines with complete data provenance and audit trails for safety-critical use
- Reduced deployment times from several days to twenty to forty minutes; resolved an infrastructure blocker uncracked for over a year
- Steered a multinational team of architects, data scientists, engineers, and QA across release cycles

BUNDESAGENTUR FÜR ARBEIT 2023, 2024

Product Manager, Data and Analytics Platform

- Owned a national analytics platform on a warehouse-grade ETL stack used by policy makers and researchers across Germany
- Introduced automated ETL orchestration and standardised CI/CD, reducing pipeline failure rates and manual intervention
- Served as deputy IT security officer: compliance, governance, and data lineage under a recurring audit cycle

EMIL GROUP 2022, 2022

Product Manager, B2B SaaS Platform

- Delivered modules across product configuration, pricing, underwriting, policy issuance, and document workflow automation for insurers, reinsurers, brokers, and underwriters
- Built a claims module from zero, running discovery directly with a pilot customer's claims specialists, no prior specification

- Restructured a seventeen-person delivery organisation into effective teams; restored velocity and client trust
- Instrumented the claim flow so that churn per process step became the leading prioritisation metric

CLINET PLATFORMS 2021, 2022

Product Owner, Mobile Application (iOS and Android)

- Shipped a hospital application across two platforms for several distinct user groups
- Implemented the interface into the incumbent clinical system landscape directly
- Cut an overambitious roadmap to the most valuable ten percent of features, maintaining stakeholder alignment throughout

BUNDESDRUCKEREI 2021, 2021

Product Owner, National Health Data Platform

- Owned secure data structures and identity management for national pandemic monitoring programmes under the highest privacy requirements

SCHEIDT & BACHMANN 2020, 2021

Product Owner, Integration Team (Fuel and Convenience Retail)

- Owned the integration team backlog downstream of research, turning research outcomes into releasable integration across site and head-office systems
- Backlog ownership in a fully SAFe organisation: PI planning, release train coordination, cross-team dependency management

AOK ITSCARE 2019, 2020

Proxy Product Owner

- Led migration of an internal procurement platform serving roughly twenty thousand employees across three regional health insurers
- Managed catalogue and API integration into legacy systems with approval workflows per organisational unit

§ FOUNDER & EARLY-STAGE EXPERIENCE

KVITT PAYMENT SOLUTIONS 2013, 2018

Founder and CFO

- Built a mobile payments platform from zero: PSP integration, settlement flows, onboarding, and full user experience; acquired and operated by Sparkasse

- As CFO owned accounting, financial planning, and investor reporting

QCRYPT AG 2016, 2018

Co-Founder and Product Owner

- Shipped quantum-secure encryption across a three-layer hardware and software architecture to enterprise customers under a sub-two-minute installation constraint
- Owned the full product architecture for backup, restore, checkpoint, and data-encryption modules

SMART SOIL TECHNOLOGIES 2016, 2021

Co-Founder, CDO and CFO

- Brought a nanotechnology product from laboratory to investor rounds; owned finance, HR, and the ERP rollout
