Dear Stripe team,

Stripe Treasury for Platforms is asking for someone who can own the path from alpha to general availability on new account types, checkbooks, and accounting integrations, joining sales calls, running demos, and sitting between engineering and the platform developer in the room. That is the exact shape of work I have done repeatedly, most directly at Kvitt Payment Solutions, where I took a mobile P2P payments product from zero to acquisition inside the girocard ecosystem, and at EMIL Group, where I shipped the Claims Center from concept to production on a B2B SaaS insurance platform with 18 engineers across three teams.

At Rohde & Schwarz I owned the AI and data platform for the FCAS programme, a multinational infrastructure product with strict compliance and security requirements. I instrumented competing developer workflows to make a roadmap decision, UI-led recorded exactly zero clicks, developer-code-first increased pipeline runs by 200%. That is the kind of data-first, opinionated product thinking this role asks for. I am comfortable writing SQL to answer a question myself rather than waiting for an analyst.

The Treasury for Platforms problem that interests me most is the compliance and bank-partnership layer that lets platforms launch quickly while staying inside regulatory guardrails. I have owned that tension in payments (girocard ecosystem), public-sector analytics (Bundesagentur für Arbeit, Deputy IT Security Officer), and defence AI (FCAS, EU AI Act compliance). I understand that the regulatory constraint is usually also the moat.

I have not shipped treasury account types directly, and I said so upfront in the framing section of this application. What I bring instead is thirteen years of regulated infrastructure product ownership, a working knowledge of platform economics from building a two-sided marketplace myself, and the technical range to hold a productive conversation with a Stripe engineer about API design or schema tradeoffs. I can close the domain gap faster than someone without the infrastructure and payments foundation.

I would be glad to talk through the Treasury roadmap and where I could add the most traction earliest.

Best regards, *Philipp Hilbert*
