

Philipp Hilbert. *Technical Product Manager, Agentic AI workflows.*

Positioning, I build delivery structure around agentic engineering teams, roadmap, sprint hygiene, and stakeholder alignment, without slowing down what's already working.

Dear Loansure Hiring Team,

I am applying for the Technical Product Manager, Agentic Team (Contract) role. The situation you describe, a capable engineering team that has shipped real agentic workflows but lacks a dedicated product and delivery function, is one I have navigated more than once, and it is the kind of build-it-from-scratch assignment I find most interesting.

At EMIL Group I inherited an 18-person delivery organisation that had lost its senior engineers and its client trust. I restructured it into three focused teams with their own leads, brought attrition from near-total to a single departure, and shipped the Claims Center from concept to production with no prior precedent in the organisation. At CLINET Platforms I took a five-person team with an undeliverable roadmap, cut it to the top 10% of features against agreed success measures, and watched user acceptance rise more than fivefold. Both of those situations required the same thing Loansure is asking for: the credibility to make prioritization decisions that hold, not just relay them.

The agentic workflows dimension is not theoretical for me. I run multi-agent orchestration with n8n, I use Claude Code and Cursor daily for in-repo work, and I built construct8, a two-sided B2B staffing marketplace, solo, with LLM agents handling intake, qualification, and matching across WhatsApp and Telegram. That background means I can read the engineering team's work at a level of detail that builds trust rather than creating translation overhead. It also means I have direct intuitions about which of the citizen-builder tools your business users have created in Replit and Claude are worth the engineering cost to operationalize, and which are not.

The Performance Marketing anchor is useful to me because it is measurable. Agentic teams can produce a lot of motion without producing outcomes; tying the roadmap explicitly to Performance Marketing KPIs gives a natural forcing function for prioritization and a clear story for leadership reporting. That is the model I would propose to establish in the first three weeks alongside consistent sprint planning, backlog grooming, and story-pointing norms.

I am available on short notice and comfortable operating fully remote across EST/EDT hours. I would be glad to talk through how I would approach the first 90 days in more detail.

Best regards, *Philipp Hilbert*
